

FEATURES

44 V supply maximum rating
 V_{SS} to V_{DD} analog signal range
Single-/dual-supply specifications
Wide supply range: 10.8 V to 16.5 V
Extended plastic temperature range: -40°C to $+85^{\circ}\text{C}$
Low power dissipation: 28 mW maximum
Low leakage: 20 pA typical
Available in 16-lead DIP/SOIC and 20-lead PLCC/LCC packages
Superior alternative to
DG508A, HI-508
DG509A, HI-509

FUNCTIONAL BLOCK DIAGRAMS

Figure 1. ADG508A

Figure 2. ADG509A

GENERAL DESCRIPTION

The ADG508A and ADG509A are CMOS monolithic analog multiplexers with eight channels and dual four channels, respectively. The ADG508A switches one of eight inputs to a common output, depending on the state of three binary addresses and an enable input. The ADG509A switches one of four differential inputs to a common differential output, depending on the state of two binary addresses and an enable input. Both devices have TTL and 5 V CMOS logic-compatible digital inputs.

The ADG508A and ADG509A are designed on an enhanced LC²MOS process that gives an increased signal capability of V_{SS} to V_{DD} and enables operation over a wide range of supply voltages. The devices can comfortably operate anywhere in the 10.8 V to 16.5 V single- or dual-supply range. These multiplexers also feature high switching speeds and low R_{ON} .

PRODUCT HIGHLIGHTS

1. Single-/Dual-Supply Specifications with a Wide Tolerance. The devices are specified in the 10.8 V to 16.5 V range for both single and dual supplies.
2. Extended Signal Range. The enhanced LC²MOS processing results in a high breakdown and an increased analog signal range of V_{SS} to V_{DD} .
3. Break-Before-Make Switching. Switches are guaranteed break-before-make so that input signals are protected against momentary shorting.
4. Low Leakage. Leakage currents in the range of 20 pA make these multiplexers suitable for high precision circuits.

ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$, unless otherwise noted.

Table 3.

| Parameter | Ratings |
|--|--|
| V_{DD} to V_{SS} | 44 V |
| V_{DD} to GND | 32 V |
| V_{SS} to GND | -32 V |
| Analog Inputs ¹ Voltage at S, D | $V_{SS} - 2\text{ V}$ to $V_{DD} + 2\text{ V}$ or 20 mA, whichever occurs first |
| Continuous Current, S or D | 20 mA |
| Pulsed Current S or D 1 ms Duration, 10% Duty Cycle | 40 mA |
| Digital Inputs ¹ Voltage at A, EN | $V_{SS} - 4\text{ V}$ to $V_{DD} + 4\text{ V}$ or 20 mA, whichever occurs first |
| Power Dissipation (Any Package) Up to 75°C Derates Above 75°C by | 470 mW 6 mW/ $^\circ\text{C}$ |
| Operating Temperature Commercial (K Version) | -40°C to $+85^\circ\text{C}$ |
| Industrial (B Version) | -40°C to $+85^\circ\text{C}$ |
| Extended (T Version) | -55°C to $+125^\circ\text{C}$ |
| Storage Temperature Range | -65°C to $+150^\circ\text{C}$ |

¹Overvoltage at A, EN, S, or D is clamped by diodes. Current should be limited to the maximum rating shown in Table 3.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

SINGLE-SUPPLY OCTAL DAC APPLICATION

The following circuit shows the ADG508A connected as a demultiplexer to provide eight separate, digitally programmable voltages (0 V to 10 V) from the AD7245A. The AD7245A is a complete 12-bit, voltage output DAC with output amplifier and Zener voltage reference on a monolithic CMOS chip.

The entire system operates from a single 15 V power supply. The ADG508A is ideally suited for the application because it has both low charge injection and I_s (OFF) leakage current.

OUTLINE DIMENSIONS

COMPLIANT TO JEDEC STANDARDS MS-001-AB
 CONTROLLING DIMENSIONS ARE IN INCHES; MILLIMETER DIMENSIONS
 (IN PARENTHESES) ARE ROUNDED-OFF INCH EQUIVALENTS FOR
 REFERENCE ONLY AND ARE NOT APPROPRIATE FOR USE IN DESIGN.
 CORNER LEADS MAY BE CONFIGURED AS WHOLE OR HALF LEADS.

¹ Z = RoHS Compliant Part.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:
