

## ezPyro™ I<sup>2</sup>C Pyroelectric Infrared Broadband Sensors (SMD)

### Introduction

The ezPyro range of thin film digital pyroelectric IR sensors combines high quality sensors with a high level of configurable electronic integration in a small SMD package. High sensitivity combined with fast response times ensure rapid and accurate detection of target gases. These sensors integrate a digital, current mode read-out that enables lower IR-emitter duty cycles, thereby saving significantly on system level power consumption, while maintaining high SNR. Programmable gain and filtering offer maximum flexibility in system design. Industry standard I<sup>2</sup>C communication enables plug-and-play connectivity to microcontrollers and allows easy tuning and calibration. ezPyro sensors are very stable over time ensuring a long and maintenance-free operational lifespan. Various optical filter options are available.

To make it easier for customers to use their own optical bandpass filters Pyreos provides sensors with either a 2.5-6 μm or 6-14 μm broadband filter. Optical bandpass filters can be applied in front of these broadband filters.
