

FEATURES

- 44 V supply maximum ratings**
- V_{SS} to V_{DD} analog signal range**
- Low on resistance (100 Ω maximum)**
- Low power (I_{SUPPLY} < 75 μA)**
- Fast switching**
- Break-before-make switching action**
- Plug-in replacement for DG408/DG409**

APPLICATIONS

- Audio and video routing**
- Automatic test equipment**
- Data acquisition systems**
- Battery-powered systems**
- Sample-and-hold systems**
- Communication systems**

GENERAL DESCRIPTION

The [ADG408/ADG409](#) are monolithic CMOS analog multiplexers comprising eight single channels and four differential channels, respectively. The [ADG408](#) switches one of eight inputs to a common output as determined by the 3-bit binary address lines A0, A1, and A2. The [ADG409](#) switches one of four differential inputs to a common differential output, as determined by the 2-bit binary address lines A0 and A1. An EN input on both devices is used to enable or disable the device. When the device is disabled, all channels are switched off.

The [ADG408/ADG409](#) are designed on an enhanced LC²MOS process that provides low power dissipation yet gives high switching speed and low on resistance. Each channel conducts equally well in both directions when on and has an input signal range that extends to the supplies. In the off condition, signal levels up to the supplies are blocked. All channels exhibit break-before-make switching action, preventing momentary shorting when switching channels. Inherent in the design is low charge injection for minimum transients when switching the digital inputs.

The [ADG408/ADG409](#) are improved replacements for the DG408/DG409 analog multiplexers.

FUNCTIONAL BLOCK DIAGRAMS

Figure 1.

00027-001

PRODUCT HIGHLIGHTS

1. **Extended Signal Range.** The [ADG408/ADG409](#) are fabricated on an enhanced LC²MOS process, giving an increased signal range that extends to the supply rails.
2. **Low Power Dissipation.**
3. **Low R_{ON}.**
4. **Single-Supply Operation.** For applications where the analog signal is unipolar, the [ADG408/ADG409](#) can be operated from a single rail power supply. The parts are fully specified with a single 12 V power supply and remain functional with single supplies as low as 5 V.

| SOIC Package, Power Dissipation | 600 mW |
| θ_{JA} , Thermal Impedance | 77°C/W |
| Lead Temperature, Soldering | |
| Vapor Phase (60 sec) | 215°C |
| Infrared (15 sec) | 220°C |

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 2. ADG408 Pin Configuration

Figure 3. ADG409 Pin Configuration

Table 4. ADG408 Pin Function Descriptions

| Pin No. | Mnemonic | Description |
|---------|-----------------|---|
| 1 | A0 | Logic Control Input. |
| 2 | EN | Active High Digital Input. When low, the device is disabled and all switches are off. When high, Ax logic inputs determine on switches. |
| 3 | V _{SS} | Most Negative Power Supply Potential in Dual Supplies. In single-supply applications, it can be connected to ground. |
| 4 | S1 | Source Terminal 1. Can be an input or an output. |
| 5 | S2 | Source Terminal 2. Can be an input or an output. |
| 6 | S3 | Source Terminal 3. Can be an input or an output. |
| 7 | S4 | Source Terminal 4. Can be an input or an output. |
| 8 | D | Drain Terminal. Can be an input or an output. |
| 9 | S8 | Source Terminal 8. Can be an input or an output. |
| 10 | S7 | Source Terminal 7. Can be an input or an output. |
| 11 | S6 | Source Terminal 6. Can be an input or an output. |
| 12 | S5 | Source Terminal 5. Can be an input or an output. |
| 13 | V _{DD} | Most Positive Power Supply Potential. |
| 14 | GND | Ground (0 V) Reference. |
| 15 | A2 | Logic Control Input. |
| 16 | A1 | Logic Control Input. |

TERMINOLOGY

R_{ON}

Ohmic resistance between D and S.

ΔR_{ON}

Difference between the R_{ON} of any two channels.

I_S (Off)

Source leakage current when the switch is off.

I_D (Off)

Drain leakage current when the switch is off.

I_D, I_S (On)

Channel leakage current when the switch is on.

V_D (V_S)

Analog voltage on Terminal D and Terminal S.

C_S (Off)

Channel input capacitance for off condition.

C_D (Off)

Channel output capacitance for off condition.

C_D, C_S (On)

On switch capacitance.

C_{IN}

Digital input capacitance.

t_{ON} (EN)

Delay time between the 50% and 90% points of the digital input and switch on condition.

t_{OFF} (EN)

Delay time between the 50% and 90% points of the digital input and switch off condition.

t_{TRANSITION}

Delay time between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

t_{OPEN}

Off time measured between the 80% point of both switches when switching from one address state to another.

V_{INL}

Maximum input voltage for Logic 0.

V_{INH}

Minimum input voltage for Logic 1.

I_{INL} (I_{INH})

Input current of the digital input.

Crosstalk

A measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance.

Off Isolation

A measure of unwanted signal coupling through an off channel.

Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during switching.

I_{DD}

Positive supply current.

I_{SS}

Negative supply current.

OUTLINE DIMENSIONS

| ADG409BRZ-REEL7 | -40°C to +85°C | 16-Lead Narrow Body Small Outline Package [SOIC_N] | R-16 |

¹ Z = RoHS Compliant Part

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:
