

### Features

- Meets or Exceeds the Requirements of ANSI TIA/EIA-644-1995 Standard
- Signaling rates up to 400 Mbps
- Interfaces to LVDS, LVPECL
- Bus-Terminal ESD exceeds 10kV
- Differential Input Voltage Threshold less than 100mV
- Typical Propagation Delay Times of 2.6ns
- Typical Power Dissipation of 40mW @200 MHz
- Low Voltage TTL (LVTTTL) Level is 5V Tolerant
- Open-Circuit Fail Safe
- Output are High Impedance with  $V_{CC} < 1.5V$
- Integrated 110-ohm Line Termination Resistor (PI90LVT02)
- Operates from a 3.3V supply
- Input common-mode voltage range 0V–3.2V
- Industrial Temperature Operating Range: –40°C to 85°C
- Packaging (Pb-free & Green available):  
 - 5-pin space-saving SOT23 (T)

### Description

The PI90LV02 and PI90LVT02 are single differential line receivers that use low-voltage differential signaling (LVDS) to support data rates up to 400 Mbps. These products are designed for applications requiring high-speed, low-power consumption, low-noise generation, and a small package.

A differential input signal (350mV) is translated by the device to a 3.3V CMOS output level. The PI90LVT02 integrates the terminating resistor while the PI90LV02 requires an external resistor.

### Applications

Applications include point-to-point and multi-drop baseband data transmissions over impedance media of approximately 100-ohms. The transmission media can be printed circuit board traces, backplanes, or cables.

The PI90LV02 and PI90LVT02 and companion line drivers (PI90LV01 and PI90LVB01) provide new alternatives to RS-232, PECL, and ECL devices for high-speed, point-to-point interface applications.

### Function Table

| Inputs                  | Outputs   |
|-------------------------|-----------|
| $V_{ID} = V_A - V_B$    | $R_{OUT}$ |
| $V_{ID} > 50mV$         | H         |
| $-50mV < V_{ID} < 50mV$ | ?         |
| $V_{ID} \leq -50mV$     | L         |
| Open                    | H         |

H = high level  
 L = low level  
 ? = indeterminate

### Absolute Maximum Ratings Over Operating Free-Air Temperature

(unless otherwise noted)†

|  |                              |
|--|------------------------------|
| Supply Voltage Range, $V_{CC}^{(1)}$ .....                         | -0.5V to 4V                  |
| Voltage Range (A, B, or $R_{OUT}$ ) .....                          | -0.5 to $V_{CC}+0.5V$        |
| ESD rating (HBM, 1.5K-ohms, 100pF) .....                           | ≥10KV                        |
| Continuous total power dissipation .....                           | See dissipation rating table |
| Storage Temperature Range .....                                    | -65°C to 150°C               |
| Lead Temperature 1.6 mm (1/16 inch) from case for 10 seconds ..... | 250°C                        |

† Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to Absolute-Maximum-Rated conditions for extended periods may affect device reliability.

**Notes:**

1. All voltage values, except differential I/O bus voltages, are with respect to ground terminal.

### Dissipation Rating Table

| Package          | $T_A$ = 25°C Power Rating | Derating Factor Above $T_A = 25^\circ C^{**}$ | $T_A = 85^\circ C$ Power Rating |
|------------------|---------------------------|---|---------------------------------|
| 5-Pin SOT-23 (T) | 385mW                     | 3.1mW/°C                                      | 200mW                           |

\*\*This is the inverse of the junction-to-ambient thermal resistance when board-mounted (low-K) and with no air flow.

### Recommended Operating Conditions

|   | Min. | Nom. | Max.                       | Units |
|---|------|------|----------------------------|-------|
| Supply Voltage, $V_{CC}$                            | 3.0  | 3.3  | 3.6                        | V     |
| Magnitude of differential input voltage, $ V_{ID} $ | 0.1  |      | 0.6                        |       |
| Common-Mode Input Voltage, $V_{IC}$ (See Figure 6)  | 0    |      | $2.0 - \frac{ V_{ID} }{2}$ |       |
|   |      |      | $V_{CC} - 0.8$             |       |
| Operating free-air temperature, $T_A$               | -40  |      | 85                         | °C    |

Figure 1.  $V_{IC}$  vs.  $V_{ID}$  and  $V_{CC}$

**Electrical Characteristics,  $V_{CC} = 3V$  to  $3.6V$**  (Over Recommended Operating Conditions, unless otherwise noted).

| Symbol       | Parameter   | Test Conditions         | Min.   | Typ. <sup>(1)</sup> | Max. | Units    |         |

|              |   | LVT02                   | $V_{IA} = 2.4V, V_{IB} = 2.3V$                                 | 1.5                 | 1.8  | 2.2      |         |
| $I_{I(OFF)}$ | Power-off input current (A or B inputs)             | LV02                    | $V_{CC} = 0V, V_I = 2.4V$                                      |                     |      | 20       | $\mu A$ |
|              |   | LVT02                   | $V_{CC} = 0V, V_I = 2.4V$ ,<br>Other input open                |                     |      | 40       |         |

**Receiver Switching Characteristics,  $V_{CC} = 3V$  to  $3.6V$**  (Over Recommended Operating Conditions, unless noted).

| Symbol             | Parameter   | Test Conditions                        | Min. | Typ. <sup>(1)</sup> | Max. | Units |
|--------------------|---|--|------|---------------------|------|-------|
| t <sub>PLH</sub>   | Propagation delay time, low-to-high level output            | C <sub>L</sub> = 10pF,<br>See Figure 3 | 1.3  | 2.1                 | 3.2  | ns    |
| t <sub>PHL</sub>   | Propagation delay time, high-to-low level output            |  | 1.3  | 2.0                 | 3.2  |       |
| t <sub>r</sub>     | Output signal rise time                                     |  |      | 0.7                 | 1.4  |       |
| t <sub>f</sub>     | Output signal fall time                                     |  |      | 0.7                 | 1.4  |       |
| t <sub>sk(p)</sub> | Pulse skew ( $ t_{PHL} - t_{PLH} $ ) <sup>(2)</sup>         |  |      | 0.1                 | 0.5  |       |
| t <sub>PZH</sub>   | Propagation delay time, high-level-to-high-impedance output | See Figure 4                           |      | 1.5                 | 3.1  |       |
| t <sub>PZL</sub>   | Propagation delay time, low-level-to-low-impedance output   |  |      | 4.0                 | 6.0  |       |
| t <sub>PHZ</sub>   | Propagation delay time, high-impedance-to-high-level output |  |      | 2.5                 | 3.5  |       |
| t <sub>PLZ</sub>   | Propagation delay time, low-impedance-to-high-level output  |  |      | 6.0                 | 7.6  |       |

**Notes:**

1. All typical values are at 25°C and with a 3.3V supply
2. t<sub>sk(p)</sub> is the magnitude of the time difference between the high-to-low and low-to-high propagation delay times at an output.

| 1.8                  | 2.4             | -600                                      | 2.1                                     |
| 0.6                  | 0               | 600                                       | 0.3                                     |
| 0                    | 0.6             | -600                                      | 0.3                                     |

**Note A:** All input pulses are supplied by a generator having the following characteristics:  
 $t_r$  or  $t_f \leq 1\text{ns}$ , pulse repetition rate (PRR) = 50 Mpps, pulse width =  $10 \pm 0.2\text{ns}$ .  
 $C_L$  includes instrumentation and fixture capacitance within 0.06m of the D.U.T.

**Note B:** To verify input max signalling rate, the input signal transition time ( $t_r/t_f$ ) should not exceed 1.25ns.

**Figure 3. Timing Test Circuit and Waveforms**

NOTE A: All input pulses are supplied by a generator having the following characteristics:  $t_r$  or  $t_f \leq 1\text{ns}$ , pulse repetition rate (PRR) = 0.5 Mpps, pulse wide =  $500 \pm 10\text{ns}$ .  $C_L$  includes instrumentation and fixture capacitance within 0.06m of the D.U.T.

NOTE B: To verify input max signalling rate, the input signal transition time ( $t_r/t_f$ ) should not exceeds 1.25ns.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
