Product Description

The TGC4402-SM upconverting mixer is designed to support a variety of millimeter wave applications including point-to-point digital radio and K band Sat-Com.

The TGC4402-SM provides 9 dB nominal conversion loss across 18-26 GHz. Typical LO input drive is 19 dBm across the band. The input IF Frequency is 0.5 – 3 GHz.

The TGC4402-SM requires only 2 off-chip components. Each device is 100% DC and RF tested on-wafer to ensure performance compliance. The device is available in chip form.

The TGC4402-SM has a protective surface passivation layer providing environmental robustness.

P _{in}	LO Input Continuous Wave Power	25 dBm	

1/ These ratings represent the maximum operable values for this device. Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device and / or affect device lifetime. These are stress ratings only, and functional operation of the device at these conditions is not implied.

F _{OUT}	RF Output Frequencies		18 - 26	GHz
F _{IF}	IF Input Frequency		0.5 - 3	GHz
F _{LO}	LO Input Frequency		16 - 26	GHz

Table IV
Power Dissipation and Thermal Properties

Parameter	Test Conditions	Value	Notes
Maximum Power Dissipation	Tbaseplate = 70 °C	Pd = 0.45 W Tchannel = 138 °C Tm = 1.0E+6 Hrs	1/ 2/
Thermal Resistance, θ_{jc}	LO input power is 17 dBm	θ_{jc} = 76 (°C/W) Tchannel = 121 °C Tm = >1E+6 Hrs	
Mounting Temperature	30 seconds	320 °C Max	
Storage Temperature		-65 to 150 °C	

- 1/ For a median life, Tm, of 1E+6 hours, power dissipation is limited to

$$Pd(max) = (TBD\text{ }^{\circ}C - Tbase\text{ }^{\circ}C) / \theta_{jc}.$$
- 2/ Channel operating temperature will directly affect the device median time to failure (MTTF). For maximum life, it is recommended that channel temperatures be maintained at the lowest possible levels.

Assembly Notes

Recommended Surface Mount Package Assembly

- Proper ESD precautions must be followed while handling packages.
- Clean the board with acetone. Rinse with alcohol. Allow the circuit to fully dry.
- TriQuint recommends using a conductive solder paste for attachment. Follow solder paste and reflow oven vendors' recommendations when developing a solder reflow profile. Typical solder reflow profiles are listed in the table below.
- Hand soldering is not recommended. Solder paste can be applied using a stencil printer or dot placement. The volume of solder paste depends on PCB and component layout and should be well controlled to ensure consistent mechanical and electrical performance.
- Clean the assembly with alcohol.
