

# Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

## General Description

The MAX4762–MAX4764/MAX4764A/MAX4765 dual SPDT (single-pole/double-throw) switches feature negative signal capability that allows signals below ground to pass through without distortion. These analog switches operate from a single +1.8V to +5.5V supply and have low  $0.6\Omega$  on-resistance, making them ideal for switching audio signals.

The MAX4763/MAX4765 include a comparator that can be used for headphone detection or a mute/send key function. The MAX4764/MAX4764A/MAX4765 have an internal shunt switch to automatically discharge any capacitance at the NO and NC connection points. This reduces click-and-pop sounds that occur when switching audio signals between precharged points.

These SPDT switches are available in space-saving  $\mu$ MAX®, TDFN, thin QFN, and UCSP™ packages and operate over the  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  extended temperature range.

## Applications

Cell Phones  
PDAs and Handheld Devices  
Notebook Computers  
MP3 Players

## Features

- ◆ Distortion-Free Negative Signal Throughput Down to  $V_{CC} - 5.5V$
- ◆ Comparator for Headphone or Mute Detection (MAX4763/MAX4765)
- ◆ Internal Shunt Resistor Reduces Click/Pop (MAX4764/MAX4764A/MAX4765)
- ◆ Low On-Resistance ( $R_{ON}$ )  
 $0.6\Omega$  at +2.7V Supply
- ◆  $0.25\Omega$  On-Resistance Flatness
- ◆  $0.05\Omega$  On-Resistance Matching
- ◆ +1.8V to +5.5V Supply Voltage
- ◆ -70dB Crosstalk (100kHz)
- ◆ -65dB Off-Isolation (100kHz)
- ◆ 0.01% Total Harmonic Distortion
- ◆ Available in  $\mu$ MAX, TDFN, Thin QFN, and UCSP Packages

## Ordering Information

 Vapor Phase (60s) .....+215°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = +2.7V to +5.5V, T<sub>A</sub> = -40°C to +85°C, unless otherwise noted. Typical values are at V<sub>CC</sub> = +3.0V, T<sub>A</sub> = +25°C, unless otherwise noted.) (Note 1)

**Note 1:** UCSP and TDFN parts are 100% tested at  $T_A = +25^{\circ}C$  only, and guaranteed by design over the specified temperature range. Thin QFN parts are 100% tested at  $T_A = +85^{\circ}C$  only, and guaranteed by design over the specified temperature range.

**Note 2:** Signals on  $COM_{-}$ ,  $NO_{-}$ , or  $NC_{-}$  exceeding  $V_{CC}$  are clamped by internal diodes. Limit forward-diode current to maximum current rating.

**Note 3:** Thin QFN and UCSP are guaranteed by design; not production tested.

**Note 4:**  $I_{COM}$  for UCSP is 10mA.

**Note 5:**  $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$ .

**Note 6:** Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

**Note 7:** MAX4764/MAX4764A/MAX4765 have an internal shunt switch when in off-state, which determines OFF current.

**Note 8:** Leakage parameters are 100% tested at maximum-rated hot operating temperature and guaranteed by design at  $T_A = +25^{\circ}C$ .

**Note 9:** UCSP parts are guaranteed by design.

**Note 10:** Off-isolation =  $20\log_{10}(V_{COM} / V_{NO})$ ,  $V_{COM}$  = output,  $V_{NO}$  = input to off switch.

**Note 11:** Guaranteed by design, not production tested.

MAX4762-MAX4764/MAX4764A/MAX4765

# Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

Figure 1. Typical Operating Circuit

## Detailed Description

The MAX4762-MAX4764/MAX4764A/MAX4765 are low on-resistance, low-voltage, dual SPDT analog switches that operate from a +1.8V to +5.5V supply and are fully specified for nominal 3.0V applications. The devices feature a negative signal capability that allows signals below ground to pass through without distortion and have break-before-make switching.

The MAX4763/MAX4765 feature a comparator that can be used for headphone or mute detection. The comparator threshold is internally generated to be approximately  $1/3$  of  $V_{CC}$ . The MAX4764/MAX4764A/MAX4765 feature an internal shunt switch to discharge any capacitance at the NO and NC connection points. This reduces the click-and-pop sounds that occur when switching audio signals.

## Applications Information

### Digital Control Inputs

The MAX4762-MAX4764/MAX4764A/MAX4765 logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply,  $IN_{-}$  can be driven low to GND and high to +5.5V allowing for mixing of logic levels in a system. Driving  $IN_{-}$  rail-to-rail minimizes power consumption. For a +1.8V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high); for a +5V supply voltage, the logic thresholds are 0.8V (low) and 2.0V (high).

### Analog Signal Levels

The on-resistance of the MAX4762-MAX4764/MAX4764A/MAX4765 changes very little for analog input signals across the entire supply voltage range (see the *Typical Operating Characteristics*). The switches are bidirectional, so the  $NO_{-}$ ,  $NC_{-}$ , and  $COM_{-}$  pins can be either inputs or outputs.

The MAX4762-MAX4764/MAX4764A/MAX4765 pass signals as low as  $V_{CC} - 5.5V$ , including signals below ground with minimal distortion.

### Comparator (MAX4763/MAX4765)

The MAX4763/MAX4765 include a comparator that can be used for mute and headphone detection functions. The positive terminal of the comparator is internally set to  $V_{CC} / 3$ . When the negative terminal (CMP-) is below the threshold, the comparator output (CMPO) is a logic high. When CMP- rises above  $V_{CC} / 3$ , CMPO is a logic low.

The comparator threshold of  $V_{CC} / 3$  allows for detection of headphones because headphone audio signals are typically biased to  $V_{CC} / 2$ .

### Shunt Switch (MAX4764/MAX4764A/MAX4765)

The 100Ω shunt switches on the MAX4764/MAX4764A/MAX4765 automatically discharge any capacitance at the  $NC_{-}$  or  $NO_{-}$  terminals when they are unconnected to  $COM_{-}$ . This reduces audible click-and-pop sounds that occur when switching between audio sources.

Audible clicks and pops are caused when a step DC voltage is switched into the speaker. By automatically discharging the side that is not connected, any residual DC voltage is removed, thereby reducing the clicks and pops.

### Power-Supply Sequencing and Overvoltage Protection

**Caution: Do not exceed the absolute maximum ratings since stresses beyond the listed ratings may cause permanent damage to the device.**

Proper power-supply sequencing is recommended for all CMOS devices. Always apply  $V_{CC}$  before applying analog signals, especially if the analog signal is not current-limited.

## UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, printed circuit board techniques, bump-pad layout, and recommended reflow temperature profile, as well as the latest information on reliability testing results, go to the Maxim's website at [www.maxim-ic.com/ucsp](http://www.maxim-ic.com/ucsp) and search for the Application Note, "UCSP—A Wafer-Level Chip-Scale Package."

NOTES:

- DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
- ALL DIMENSIONS ARE IN MILLIMETERS, ANGLES ARE IN DEGREES.
- N IS THE TOTAL NUMBER OF TERMINALS.
- THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC 93-1 SPP-012. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
- DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.25 mm AND 0.30 mm FROM TERMINAL TIP.
- ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
- DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
- COPLANARITY APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
- DRAWING CONFORMS TO JEDEC MO220, EXCEPT FOR T2444-3, T2444-4 AND T2844-1.
- MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
- COPLANARITY SHALL NOT EXCEED 0.08mm
- WARRPAGE SHALL NOT EXCEED 0.10mm
- LEAD CENTERLINES TO BE AT TRUE POSITION AS DEFINED BY BASIC DIMENSION "e",  $\pm 0.05$ .
- NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY.

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
