

## LGA50A

LG A 50 A -5 -

① ② ③ ④ ⑤ ⑥

Recommended EMI/EMC Filter  
NAC-06-472

High voltage pulse noise type : NAP series  
Low leakage current type : NAM series  
\* The EMI/EMC Filter is recommended to connect with several devices.

- ① Series name  
② Single output  
③ Output wattage  
④ 100/120V input  
⑤ Output voltage  
⑥ Optional  
C : with Coating  
G : Low leakage current  
H : with the function to be acceptable to output peak current (only 24V)  
J1 : VH(J.S.T.)connector type  
S : with Chassis  
SN : with Chassis & cover  
Y : with Potentiometer

This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.

\*1 This is the value that measured on measuring board with capacitor of 22  $\mu$ F at 150mm from output terminal.  
Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max. or less is acceptable if the total wattage is less than the rated wattage (24V:60W).  
Refer to instruction Manual 5. In detail.

\*4 Only output 24V and 48V DC models are applied that the upper temperature limit is 45°C.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology.  
The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.  
Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care. Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology.  
The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.  
Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

- ※ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care. Take care for SMD parts on the back to come in contact because of the vibration and not to break down.
- ※ Use the spacer of 8mm length or more.
- ※ 4 Mounting holes are existing.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM-103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.

\*3 Peak loading for 10sec. And Duty 35% max. or less is acceptable if the total wattage is less than the rated wattage.

Refer to instruction Manual 5. In detail.

\* Avoid prolonged use under over - load.

\* Parallel operation with other model is not possible.

\* Derating is required when operated with chassis and cover.

\* A sound may occur from power supply at pulse loading.

※ This power supply is manufactured by SMD technology.

The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.

Take care for SMD parts on the back to come in contact because of the vibration and not to break down.

※ Use the spacer of 8mm length or more.

※ 5 Mounting holes are existing.

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
