

## High surge voltage 1.25 A SCR for circuit breaker

Datasheet - production data

### Description

Thanks to highly sensitive triggering levels, the TS110-8 series is suitable for circuit breaker applications where the available gate current is limited.

The 1250 V direct surge voltage capability of the TS110-8 enables high robustness of the whole circuit breaker. The low leakage current of the TS110-8 reduces power consumption over the entire lifetime of the circuit breaker. The high off-state immunity (200 V/μs) insures the non tripping of the breaker in case of electrical fast transient (EFT) on the mains.

The TS110-8 is available in through-hole TO-92 package with GAK and KGA pinout and in SMBflat-3L package.

### Features

- On-state rms current, 1.25 A
- Repetitive peak off-state voltage, 800 V
- Non-repetitive direct surge peak off-state voltage, 1250 V
- Non-repetitive reverse surge peak off-state voltage, 900 V
- Triggering gate current, 100 μA
- High off-state immunity: 200 V/μs
- ECOPACK<sup>®</sup>2 compliant component

### Applications

- GFCI (Ground Fault Circuit Interrupter)
- AFCI (Arc Fault Circuit Interrupter)
- RCD (Residual Current Device)
- RCBO (Residual Current circuit Breaker with Overload protection)
- AFDD (Arc Fault Detection Device)

## 2 AC line transient voltage ruggedness

In comparison with standard SCRs, the TS110-8 is self-protected against over-voltage. The TS110-8 switch can safely withstand AC line direct surge voltages by switching to the on state (for less than 10 ms on 50 Hz mains) to dissipate energy shocks through the load. The load limits the current through the TS110-8. The self-protection against over-voltage is based on an overvoltage crowbar technology. This safety feature works even with high turn-on current ramp up.

Figure 16 represents the TS110-8 in a test environment. It is used to stress the TS110-8 switch according to the IEC 61000-4-5 standard conditions. The TS110-8 folds back safely to the on state as shown in Figure 17.

The TS110-8 recovers its blocking voltage capability after the direct surge and the next zero current crossing. Such a non repetitive test can be done at least 10 times.

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
