Description

The [SD2931-12MR](#) is a gold metallized N-channel MOS field-effect RF power transistor. Electrically identical to the standard SD2931 MOSFET, it is used for 50 V DC large signal applications up to 230 MHz.

The device is mechanically compatible with the SD2931 but offers better thermal capability (25% lower thermal resistance), representing the best-in-class in transistors for ISM applications, where reliability and ruggedness are critical factors.

The [SD2931-12MR](#) benefits from the latest generation of environmentally designed packing, ruggedized against cyclic high moisture operation and severe storage conditions.
