Serial Interface:

Data can only be written when STB is LOW.

The first byte (Start byte) consists of 8 bits. Bits 1 through 5 are Synchronous bits, bit 6 is R/W, bit 7 is RS, bit 8 is LOW.

R/W is HIGH to read from the display, or LOW to write data to the display.

RS is HIGH to read/write Data, or LOW to read/write an Instruction.

The following byte or bytes is the 8-bit instruction or data sent to/from the display.
