

## FEATURES

Complies with ANSI TIA/EIA-485-A-1998 and  
ISO 8482: 1987(E)

250 kbps data rate

$\pm 4$  kV HBM ESD protection on all pins

Single 5 V  $\pm$  10% supply

-7 V to +12 V bus common-mode range

Connect up to 32 nodes on the bus

Reduced slew rate for low EM interference

Short-circuit protection

30  $\mu$ A supply current

## APPLICATIONS

Low power RS-485 and RS-422 systems

DTE-DCE interface

Packet switching

Local area networks

Data concentration

Data multiplexers

Integrated services digital network (ISDN)

## GENERAL DESCRIPTION

The [ADM488A](#) and [ADM489A](#) are low power, differential line transceivers suitable for communication on multipoint bus transmission lines. They are intended for balanced data transmission and comply with both RS-485 and RS-422 standards of the Electronics Industries Association (EIA). Both products contain a single differential line driver and a single differential line receiver, making them suitable for full-duplex data transfer. The [ADM489A](#) contains an additional receiver and driver enable control.

The input impedance is 12 k $\Omega$ , allowing 32 transceivers to be connected on the bus. The [ADM488A/ADM489A](#) operate from a single 5 V  $\pm$  10% power supply.

## FUNCTIONAL BLOCK DIAGRAMS

Figure 1. [ADM488A](#)

Figure 2. [ADM489A](#)

Excessive power dissipation that is caused by bus contention or output shorting is prevented by a thermal shutdown circuit. This feature forces the driver output into a high impedance state if, during fault conditions, a significant temperature increase is detected in the internal driver circuitry.

The receiver contains a fail-safe feature that results in a logic high output state if the inputs are unconnected (floating).

The [ADM488A/ADM489A](#) are fabricated on BiCMOS, an advanced mixed technology process combining low power CMOS with fast switching bipolar technology.

The [ADM488A/ADM489A](#) are fully specified over the industrial temperature range and are available in SOIC and MSOP packages.

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$ , unless otherwise noted.

Table 3.

Parameter	Rating
$V_{CC}$	7 V
Inputs	
Driver Input (DI)	$-0.3\text{ V to }V_{CC} + 0.3\text{ V}$
Control Inputs (DE, $\overline{\text{RE}}$ )	$-0.3\text{ V to }V_{CC} + 0.3\text{ V}$
Receiver Inputs (A, B)	$-14\text{ V to }+14\text{ V}$
Outputs	
Driver Outputs	$-14\text{ V to }+12.5\text{ V}$
Receiver Output	$-0.5\text{ V to }V_{CC} + 0.5\text{ V}$
Power Dissipation 8-Lead SOIC	520 mW
$\theta_{JA}$ , Thermal Impedance	$110^\circ\text{C/W}$
Power Dissipation 14-Lead SOIC	800 mW
$\theta_{JA}$ , Thermal Impedance	$120^\circ\text{C/W}$
Operating Temperature Range	
Industrial (A Version)	$-40^\circ\text{C to }+85^\circ\text{C}$
Storage Temperature Range	$-65^\circ\text{C to }+150^\circ\text{C}$
Lead Temperature (Soldering, 10 sec)	$300^\circ\text{C}$
Vapor Phase (60 sec)	$215^\circ\text{C}$
Infrared (15 sec)	$220^\circ\text{C}$
ESD Protection on All Pins	
Human Body Model (HBM)	$\pm 4\text{ kV}$

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 3. ADM488A SOIC\_N and MSOP Pin Configuration

Table 4. ADM488A Pin Function Descriptions

Pin No.	Mnemonic	Description
1	V <sub>CC</sub>	Power Supply, 5 V ± 10%.
2	RO	Receiver Output. When A > B by 200 mV, RO = high. If A < B by 200 mV, RO = low.
3	DI	Driver Input. A logic low on DI forces Y low and Z high, whereas a logic high on DI forces Y high and Z low.
4	GND	Ground Connection, 0 V.
5	Y	Noninverting Driver, Differential Output Y.
6	Z	Inverting Driver, Differential Output Z.
7	B	Inverting Receiver, Input B.
8	A	Noninverting Receiver, Input A.

Figure 4. ADM489A SOIC\_N Pin Configuration

Figure 5. ADM489A MSOP Pin Configuration

Table 5. ADM489A Pin Function Descriptions

Pin No.		Mnemonic	Description
SOIC_N	MSOP		
1, 8, 13	N/A <sup>1</sup>	NC	No Connect. No connections are required to this pin.
2	1	RO	Receiver Output. When enabled, if A > B by 200 mV, RO = high. If A < B by 200 mV, RO = low.
3	2	RE	Receiver Output Enable. A low level enables the receiver output, RO. A high level places the ADM489A in a high impedance state.
4	3	DE	Driver Output Enable. A high level enables the driver differential outputs (Y and Z). A low level places the ADM489A in a high impedance state.
5	4	DI	Driver Input. When the driver is enabled, a logic low on DI forces Y low and Z high, whereas a logic high on DI forces Y high and Z low.
6, 7	5	GND	Ground Connection, 0 V.
9	6	Y	Noninverting Driver, Differential Output Y.
10	7	Z	Inverting Driver, Differential Output Z.
11	8	B	Inverting Receiver, Input B.
12	9	A	Noninverting Receiver, Input A.
14	10	V <sub>CC</sub>	Power Supply, 5 V ± 10%.

## THEORY OF OPERATION

The ADM488A/ADM489A are ruggedized RS-485 transceivers that operate from a single 5 V supply. They contain protection against radiated and conducted interference and are ideally suited for operation in electrically harsh environments or where cables can be plugged/unplugged. They are also immune to high RF field strengths without special shielding precautions.

The ADM488A/ADM489A are intended for balanced data transmission and comply with both EIA RS-485 and RS-422 standards. They contain a differential line driver and a differential line receiver, and are suitable for full-duplex data transmission.

The input impedance on the ADM488A/ADM489A is 12 k $\Omega$ , allowing up to 32 transceivers on the differential bus. The ADM488A/ADM489A operate from a single 5 V  $\pm$  10% power supply. A thermal shutdown circuit prevents excessive power dissipation caused by bus contention or by output shorting. This feature forces the driver output into a high impedance state if, during fault conditions, a significant temperature increase is detected in the internal driver circuitry.

The receiver contains a fail-safe feature that results in a logic high output state if the inputs are unconnected (floating).

The ADM488A/ADM489A can transmit at data rates up to 250 kbps. Figure 20 shows a typical application for the ADM488A/ADM489A, a full-duplex link where data transfers at rates of up to 250 kbps. A terminating resistor is shown at both ends of the link. This termination is not critical because

the slew rate is controlled by the ADM488A/ADM489A and reflections are minimized.

The communications network can be extended to include multipoint connections, as shown in Figure 22. As many as 32 transceivers can be connected to the bus.

Table 6 and Table 7 show the truth tables for transmitting and receiving.

Table 6. Transmitting Truth Table

Inputs			Outputs	
RE	DE	DI	Z	Y
X <sup>1</sup>	1	1	0	1
X <sup>1</sup>	1	0	1	0
0	0	X <sup>1</sup>	High-Z	High-Z
1	0	X <sup>1</sup>	High-Z	High-Z

<sup>1</sup> X is don't care.

## APPLICATIONS INFORMATION

### DIFFERENTIAL DATA TRANSMISSION

Differential data transmission reliably transmits data at high rates over long distances and through noisy environments. Differential transmission nullifies the effects of ground shifts and noise signals, which appear as common-mode voltages on the line. Two main standards that specify the electrical characteristics of transceivers used in differential data transmission are approved by the EIA.

The RS-422 standard specifies data rates up to 10 Mbps and line lengths up to 4000 ft. A single driver can drive a transmission line with up to 10 receivers.

To cater to true multipoint communications, the RS-485 standard was defined to meet or exceed the requirements of RS-422. It also allows up to 32 drivers and 32 receivers to be connected to a single bus. An extended common-mode range of  $-7\text{ V}$  to  $+12\text{ V}$  is defined. The most significant difference between the RS-422 and RS-485 is that the RS-485 drivers can be disabled, thereby allowing up to 32 receivers to be connected to a single line. Only one driver should be enabled at a time, but the RS-485 standard contains additional specifications to guarantee device safety in the event of line contention.

### CABLE AND DATA RATE

The transmission line of choice for RS-485 communications is a twisted pair. Twisted pair cable tends to cancel common-mode noise and causes cancellation of the magnetic fields generated by the current flowing through each wire, thereby reducing the effective inductance of the pair.

The ADM488A/ADM489A are designed for bidirectional data communications on multipoint transmission lines. A typical application with a multipoint transmission network is illustrated in Figure 22. An RS-485 transmission line can have up to 32 transceivers on the bus. Only one driver can transmit at a particular time, but multiple receivers can be simultaneously enabled.

As with any transmission line, it is important to minimize reflections. This can be achieved by terminating the extreme ends of the line using resistors equal to the characteristic impedance of the line. Keep stub lengths of the main line as short as possible. A properly terminated transmission line appears purely resistive to the driver.

Table 8. Comparison of RS-422 and RS-485 Interface Standards

Specification	RS-422	RS-485
Transmission Type	Differential	Differential
Maximum Data Rate	10 Mbps	10 Mbps
Maximum Cable Length	4000 ft.	4000 ft.
Minimum Driver Output Voltage	$\pm 2\text{ V}$	$\pm 1.5\text{ V}$
Driver Load Impedance	$100\ \Omega$	$54\ \Omega$
Receiver Input Resistance	$4\text{ k}\Omega$ minimum	$12\text{ k}\Omega$ minimum
Receiver Input Sensitivity	$\pm 200\text{ mV}$	$\pm 200\text{ mV}$
Receiver Input Voltage Range	$-7\text{ V}$ to $+7\text{ V}$	$-7\text{ V}$ to $+12\text{ V}$
Number of Drivers/Receivers per Line	1/10	32/32

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
