

75 dB, FAST SETTLING, LOGARITHMIC DETECTOR / CONTROLLER 10 - 4000 MHz

Typical Applications

The HMC601LP4(E) is ideal for IF and RF applications in:

- Cellular/PCS/3G
- WiMAX, WiBro & Fixed Wireless
- Power Monitoring & Control Circuitry
- Receiver Signal Strength Indication (RSSI)
- Automatic Gain & Power Control Circuits

Features

- Wide Dynamic Range: up to 75 dB
- Fast Pulse Response: 15/34ns (Rise/Fall Time)
- Flexible Supply Voltage: +2.7V to +5.5V
- Power-Down Mode
- Excellent Stability over Temperature
- Compact 4x4mm Leadless SMT Package

Functional Diagram

General Description

The HMC601LP4(E) Logarithmic Detector/Controller converts RF signals at its input, to a proportional DC voltage at its output. The HMC601LP4(E) employ a successive compression topology which delivers extremely high dynamic range and conversion accuracy over a wide input frequency range. As the input power is increased, successive amplifiers move into saturation one by one creating an accurate approximation of the logarithm function. The output of a series of square law detectors is summed, converted into voltage domain and buffered to drive the LOGOUT output. For detection mode, the LOGOUT pin is shorted to the VSET input, and will provide a nominal logarithmic slope of 19mV/dB and an intercept of -100dBm. The HMC601LP4(E) can also be used in the controller mode where an external voltage is applied to the VSET pin, to create an AGC or APC feedback loop. The HMC601LP4(E) provides a 15/34ns (rise/fall time) response time enabling RF burst detection to a pulse rate beyond 20 MHz.

Pin Descriptions

| Pin Number | Function | Description | Interface Schematic |
|--------------------------|------------|--|---|
| 1, 6, 7-13, 15, 18-24 | N/C | These pins are not connected internally; however, this product is specified with these pins connected to RF/DC ground. | |
| 2, 5 | Vcc1, Vcc2 | Bias supply. Connect supply voltage to both pins. |  |
| 3, 4 | INP, INN | RF Input pins. Connect RF to INP, and AC couple INN to ground for single-ended operation. |  |
| 14 | PWD | Apply PWD > 0.8xVcc to initiate a power saving shutdown mode. To ensure proper start-up apply the power-up sequence shown in the "Power-Up Timing Diagram" attached to the application circuit. |  |
| 16 | VSET | VSET input in controller mode. Short this pin to LOGOUT for detector mode. |  |
| 17 | LOGOUT | Logarithmic output that converts the input power to a DC level in detector mode. Short this pin to VSET for detector mode. | |
| Package Base | GND | Exposed paddle must be connected to RF and DC ground. |  |

| U1 | HMC601LP4 / HMC601LP4E Logarithmic Detector / Controller |
| PCB [2] | 115244 Evaluation PCB |

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.

Application & Evaluation PCB Schematic

Notes

- Note 1: The HMC601LP4 & HMC601LP4E evaluation boards are pre-assembled for single-ended input, and detector/RSSI mode.
- Note 2: For single-ended input operation, use the INP port and make no connection to INN. INN is AC coupled to ground by C2
- Note 3: For differential input, remove C2, and install a 1000pF capacitor in series with INN at location shown.
- Note 4: For detector mode, connect high impedance volt meter to the LOGOUT port, and make no connection to VSET. LOGOUT is shorted to VSET by R3, as required for detector mode.
- Note 5: For controller mode, remove R3 and make appropriate connection to LOGOUT and VSET. In controller mode, the LOGOUT output can be used to drive a variable gain amplifier, or a variable attenuator, either directly or through a buffer or microcontroller. VSET should be connected to an external supply, typically between +0.6 and +1.9V.

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
