

## FEATURES

- TIA/EIA RS-485 compliant over full supply range
- 3.0 V to 5.5 V operating voltage range on  $V_{CC}$
- 1.62 V to 5.5 V  $V_{IO}$  logic supply option available
- ESD protection on the bus pins
  - IEC 61000-4-2  $\pm 12$  kV contact discharge
  - IEC 61000-4-2  $\geq \pm 12$  kV air discharge
  - HBM:  $\geq \pm 30$  kV
- Full hot swap support (glitch free power-up/power-down)
- High speed 50 Mbps data rate (ADM3065E/ADM3066E/  
ADM3067E/ADM3068E)
- Low speed 500 kbps data rate for long cables (ADM3061E/  
ADM3062E/ADM3063E)
- Full receiver short-circuit, open circuit, and bus idle fail-safe
- Extended temperature range up to 125°C
- PROFIBUS compliant at  $V_{CC} \geq 4.5$  V
- Half duplex and full duplex available
- Allows connection of up to 128 transceivers onto the bus
- Space-saving package options
  - 10-lead, 3 mm  $\times$  3 mm LFCSP
  - 8-lead and 10-lead, 3 mm  $\times$  3 mm MSOP
  - 8-lead and 14-lead, narrow body SOIC

## APPLICATIONS

- Industrial fieldbuses
- Process control
- Building automation
- PROFIBUS networks
- Motor control servo drives and encoders

## REVISION HISTORY

### 6/2019—Rev. E to Rev. F

Added ADM3068E .....	Universal
Added Figure 2; Renumbered Sequentially .....	1
Changes to Features Section and Figure 4.....	1
Changes to Table 1 Title.....	4
Changes to Table 2.....	5
Changes to ADM3061E/ADM3062E/ADM3063E Section and Table 3 .....	7
Changes to ADM3065E/ADM3066E/ADM3067E/ADM3068E Section and Table 4.....	8
Changes to Figure 5 and Figure 7 .....	9
Changes to Figure 8.....	10
Added Endnote 1 to Digital Input and Output Voltage (DE, RE, DI, and RO) Parameter, Table 5.....	11
Changes to Digital Input and Output Voltage (DE, RE, DI, and RO) Parameter, Table 5 .....	11
Changes to Table 8.....	13
Added Figure 14 and Table 10; Renumbered Sequentially .....	15
Changes to Figure 19 Caption.....	16
Changes to Figure 43 and Figure 44.....	20
Changes to Isolated High Speed RS-485 Node Section.....	24
Changes to Ordering Guide .....	27

### 4/2019—Rev. D to Rev. E

Added ADM3063E .....	Universal
Change to Features Section .....	1
Changes to Figure 3.....	1
Changes to Table 1.....	4
Changes to Table 2.....	5
Added Endnote 1, Table 2; Renumbered Sequentially .....	5
Change to Table 7 .....	11
Changes to Table 8.....	12
Changes to Figure 12 and Table 9.....	13

Added Figure 12 and Table 9; Renumbered Sequentially .....	13
Changes to Figure 14 .....	14
Moved Test Circuits to .....	18
Changes to Table 10 and Table 11 .....	20
Updated Outline Dimensions.....	26
Changes to Ordering Guide.....	27

### 1/2018—Rev. B to Rev. C

Added ADM3062E.....	Universal
Changes to Figure 2 and Table 1 .....	1

Changes to ADM3061E/ADM3062E Timing Specifications Section and Figure 3 .....	6
Changes to Figure 5 and Figure 6.....	7
Changes to Figure 9 and Figure 10 .....	11
Changes to Figure 16 and Figure 17 .....	12
Changes to Figure 44.....	21
Changes to Figure 45.....	22
Changes to Ordering Guide .....	25

**12/2017—Rev. A to Rev. B**

Added ADM3061E.....	Universal
Changes to Product Title, Features Section, Figure 1, and Table 1... 1	1
Changes to General Description Section .....	3
Changes to Table 2 .....	4
Added ADM3061E Timing Specification Section and Table 3; Renumbered Sequentially .....	6
Moved Figure 3 .....	6
Moved Figure 4, Figure 5, and Figure 6.....	7
Changes to ADM3065E/ADM3066E Timing Specification Section Title .....	8
Added 10-Lead MSOP Parameter and 10-Lead LFCSP Parameter, Table 5.....	9
Changes to Operating Temperature Range Parameter, Table 5 and Table 6 .....	9
Changes to Figure 7, Figure 8, and Table 7 .....	10
Changes to Table 8 .....	11
Changes to Figure 11 .....	12
Added Figure 23; Renumbered Sequentially .....	13
Added Figure 24, Figure 25, Figure 26, Figure 27, and Figure 28 ..	14

Changed High Speed IEC ESD Protected RS-485 Section to IEC ESD Protected RS-485 Section .....	17
Changes to IEC ESD Protected RS-485 Section .....	17
Added Endnote 4, Table 9.....	18
Changes to Table 10 .....	18
Changes to Figure 44 .....	21
Changes to Figure 45 .....	22
Changes to Ordering Guide.....	25

**5/2017—Rev. 0 to Rev. A**

Added ADM3066E.....	Universal
Changes to Features Section, Figure 1, and Table 1.....	1
Added Figure 2; Renumbered Sequentially .....	1
Moved General Description Section .....	3
Changes to General Description Section .....	3
Changes to Specifications Section and Table 2 .....	4
Changes to Timing Specifications Section and Figure 3 .....	5
Changes to Figure 4, Figure 5, and Figure 6 .....	6
Added $V_{IO}$ to GND Parameter, Table 4 .....	7
Changes to Thermal Resistance Section and Table 5 .....	7
Added Figure 8 .....	8
Changes to Table 6 .....	8
Added Figure 9 and Figure 10 .....	9
Added Table 7; Renumbered Sequentially.....	9
Changes to Figure 14, Figure 16, and Figure 17.....	10
Changes to Table 8 and Table 9 .....	15
Added Figure 42 and Figure 43 .....	20
Changes to Ordering Guide.....	21

**3/2017—Revision 0: Initial Version**

## GENERAL DESCRIPTION

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E are 3.0 V to 5.5 V, IEC electrostatic discharge (ESD) protected RS-485 transceivers, allowing the devices to withstand  $\pm 12$  kV contact discharges on the transceiver bus pins without latch-up or damage. The ADM3062E/ADM3066E/ADM3068E feature a  $V_{IO}$  logic supply pin that allow a flexible digital interface capable of operating as low as 1.62 V.

The ADM3065E/ADM3066E/ADM3067E/ADM3068E are suitable for high speed, 50 Mbps, bidirectional data communication on multipoint bus transmission lines. The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E feature a 1/4 unit load input impedance that allows up to 128 transceivers on a bus. The ADM3061E/ADM3062E/ADM3063E models offer all of the same features as the ADM3065E/ADM3066E/ADM3067E/ADM3068E models at a low 500 kbps data rate that is suitable for operation over long cable runs.

The ADM3061E/ADM3062E/ADM3065E/ADM3066E are half-duplex RS-485 transceivers, fully compliant to the PROFIBUS® standard with increased 2.1 V bus differential voltage at  $V_{CC} \geq 4.5$  V. The ADM3063E/ADM3067E/ADM3068E are full duplex RS-485 transceiver options.

The RS-485 transceivers are available in a number of space-saving packages, such as the 10-lead, 3 mm  $\times$  3 mm lead frame chip-scale package (LFCSP), the 8-lead or 10-lead, 3 mm  $\times$  3 mm mini small outline package (MSOP), and the 8-lead or 14-lead, narrow body standard small outline packages (SOIC\_N). Models with operating temperature ranges of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  and  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  are available.

Excessive power dissipation caused by bus contention or by output shorting is prevented by a thermal shutdown circuit. If a significant temperature increase is detected in the internal driver circuitry during fault conditions, this feature forces the driver output into a high impedance state.

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E guarantee a logic high receiver output when the receiver inputs are shorted, open, or connected to a terminated transmission line with all drivers disabled.

Table 1 presents an overview of the ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E data rate capability across temperature, power supply, and package options. Refer to the Ordering Guide for model numbering.

**Table 1. Summary of the ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E Operating Conditions—Data Rate Capability Across Temperature, Power Supply, and Package**

Maximum Data Rate <sup>1</sup>	Maximum $V_{CC}$ (V)	Maximum Temperature	Package Description
50 Mbps	5.5	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	10-lead LFCSP
50 Mbps	5.5	$-40^{\circ}\text{C}$ to $+105^{\circ}\text{C}$	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, and 14-lead SOIC_N
50 Mbps	3.6	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, and 14-lead SOIC_N
500 kbps	5.5	$-40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, 10-lead LFCSP, and 14-lead SOIC_N

<sup>1</sup> The ADM3065E/ADM3066E/ADM3067E/ADM3068E data input (DI) is transmitting 50 Mbps (or 500 kbps for the ADM3061E/ADM3062E/ADM3063E) clock data, and the ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E driver enable (DE) is enabled for 50% of the DI transmit time

## SPECIFICATIONS

$V_{CC} = 3.0\text{ V}$  to  $5.5\text{ V}$ ,  $V_{IO} = 1.62\text{ V}$  to  $V_{CC}$  (ADM3062E/ADM3066E/ADM3068E),  $T_A = T_{MIN}$  ( $-40^\circ\text{C}$ ) to  $T_{MAX}$  ( $+125^\circ\text{C}$ ), unless otherwise noted. All typical specifications are at  $T_A = 25^\circ\text{C}$ ,  $V_{IO} = V_{CC} = 3.3\text{ V}$ , unless otherwise noted.

Table 2.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
<b>POWER SUPPLY</b>						
No Load Supply Current	$I_{CC}$		3.5	7.5	mA	$DE = V_{IO}^1$ , $\overline{RE} = 0\text{ V}$
			3.5	7.5	mA	$DE = V_{IO}$ , $\overline{RE} = V_{IO}$
			3	4.5	mA	$DE = 0\text{ V}$ , $\overline{RE} = 0\text{ V}$

<b>TIME TO SHUTDOWN</b>	$t_{SHDN}^4$	<b>40</b>			ns	

<sup>1</sup> Maximum data rate assumes a ratio of  $t_{DR}:t_{BIT}:t_{DF}$  equal to 1:0.5:1.

<sup>2</sup>  $t_{DZH(SHDN)}$  and  $t_{DZL(SHDN)}$  refer to the time for the device to enable when DE changes from 0 V to  $V_{CC}$ .  $\overline{RE} = V_{CC}$  for this condition.

<sup>3</sup>  $t_{RZH(SHDN)}$  and  $t_{RZL(SHDN)}$  refer to the time for the device to enable when  $\overline{RE}$  changes from  $V_{CC}$  to 0 V. DE = 0 V for this condition.

<sup>4</sup> Minimum time required to put the device into shutdown: DE and  $\overline{RE}$  must be disabled for more than 40 ns for the device to go into shutdown.

**ADM3065E/ADM3066E/ADM3067E/ADM3068E**

$V_{CC} = 3.0\text{ V}$  to  $5.5\text{ V}$ ,  $V_{IO} = 1.62\text{ V}$  to  $V_{CC}$  (ADM3066E/ADM3068E),  $T_A = T_{MIN} (-40^\circ\text{C})$  to  $T_{MAX} (+125^\circ\text{C})$ , unless otherwise noted. All typical specifications are at  $T_A = 25^\circ\text{C}$ ,  $V_{IO} = V_{CC} = 3.3\text{ V}$ , unless otherwise noted.

**Table 4.**

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
<b>DRIVER</b>						
Maximum Data Rate <sup>1</sup>		50			Mbps	
Propagation Delay	$t_{DPLH}, t_{DPHL}$		9	15	ns	$R_{LDIFF} = 54\ \Omega$ , $C_{L1} = C_{L2} = 100\text{ pF}$ , see Figure 5 and Figure 40
Skew	$t_{DSKEW}$		1	2	ns	$R_{LDIFF} = 54\ \Omega$ , $C_{L1} = C_{L2} = 100\text{ pF}$ , see Figure 5 and Figure 40
Rise/Fall Times	$t_{DR}, t_{DF}$		4	6.7	ns	$R_{LDIFF} = 54\ \Omega$ , $C_{L1} = C_{L2} = 100\text{ pF}$ , see Figure 5 and Figure 40
Enable to Output High	$t_{DZH}$		10	30	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
Enable to Output Low	$t_{DZL}$		10	30	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
Disable Time from Low	$t_{DLZ}$		10	30	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
Disable Time from High	$t_{DHZ}$		10	30	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
Enable Time from Shutdown to High	$t_{DZH(SHDN)}^2$		550	2000	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
Enable Time from Shutdown to Low	$t_{DZL(SHDN)}^2$		550	2000	ns	$R_L = 110\ \Omega$ , $C_L = 50\text{ pF}$ , see Figure 6 and Figure 41
<b>RECEIVER</b>						
Maximum Data Rate		50			Mbps	
Propagation Delay	$t_{RPLH}, t_{RPHL}$		20	35	ns	$C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , $V_{CM} = 1.5\text{ V}$ , see Figure 7 and Figure 42
Skew/Pulse Width Distortion	$t_{RSKEW}$		1	3	ns	$C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , $V_{CM} = 1.5\text{ V}$ , see Figure 7 and Figure 42
Enable to Output High	$t_{RZH}$		10	35	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , DE high, see Figure 8 and Figure 44
Enable to Output Low	$t_{RZL}$		10	35	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , DE high, see Figure 8 and Figure 44
Disable Time from Low	$t_{RLZ}$		10	35	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , see Figure 8 and Figure 44
Disable Time from High	$t_{RHZ}$		10	35	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , see Figure 8 and Figure 44
Enable from Shutdown to High	$t_{RZH(SHDN)}^3$		450	2000	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , see Figure 8 and Figure 43
Enable from Shutdown to Low	$t_{RZL(SHDN)}^3$		450	2000	ns	$R_L = 1\text{ k}\Omega$ , $C_L = 15\text{ pF}$ , $ V_{ID}  \geq 1.5\text{ V}$ , see Figure 8 and Figure 43
TIME TO SHUTDOWN	$t_{SHDN}^4$	40			ns	

<sup>1</sup> Maximum data rate assumes a ratio of  $t_{DR}:t_{BIT}:t_{DF}$  equal to 1:1:1.

<sup>2</sup>  $t_{DZH(SHDN)}$  and  $t_{DZL(SHDN)}$  refer to the time for the device to enable when DE changes from 0 V to  $V_{CC}$ .  $\overline{RE} = V_{CC}$  for this condition.

<sup>3</sup>  $t_{RZH(SHDN)}$  and  $t_{RZL(SHDN)}$  refer to the time for the device to enable when  $\overline{RE}$  changes from  $V_{CC}$  to 0 V. DE = 0 V for this condition.

<sup>4</sup> Minimum time required to put the device into shutdown: DE and  $\overline{RE}$  must be disabled for more than 40 ns for the device to go into shutdown.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required.

$\theta_{JA}$  is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure.

$\theta_{JC}$  is the junction to case thermal resistance.

Table 6. Thermal Resistance

Package Type	$\theta_{JA}$ <sup>1</sup>	$\theta_{JC}$ <sup>1</sup>	Unit
R-8	110.88	58.63	°C/W
RM-8	165.69	49.61	°C/W
RM-10	165.69	49.61	°C/W
R-14	104.5	42.90	°C/W
CP-10-9	55.65	33.22	°C/W

<sup>1</sup> Thermal impedance simulated values are based on JEDEC 2S2P thermal test board with no bias. See JEDEC JESD-51.

## ESD CAUTION

### ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 9. ADM3061E/ADM3065E 8-Lead Narrow Body SOIC\_N Pin Configuration

Figure 10. ADM3061E/ADM3065E 8-Lead MSOP Pin Configuration

Table 7. ADM3061E/ADM3065E Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RO	Receiver Output Data. This output is high when $(A - B) \geq -30$ mV and low when $(A - B) \leq -200$ mV. This output is tristated when the receiver is disabled; that is, when $\overline{RE}$ is driven high.
2	$\overline{RE}$	Receiver Enable Input. This is an active low input. Driving this input low enables the receiver and driving it high disables the receiver.
3	DE	Driver Enable. A high level on this pin enables the driver differential outputs, A and B. A low level places the driver output into a high impedance state.
4	DI	Transmit Data Input. Data to be transmitted by the driver is applied to this input.
5	GND	Ground.
6	A	Noninverting Driver Output and Receiver Input. When the driver is disabled, or when $V_{CC}$ is powered down, Pin A is put into a high impedance state to avoid overloading the bus.
7	B	Inverting Driver Output and Receiver Input. When the driver is disabled, or when $V_{CC}$ is powered down, Pin B is put into a high impedance state to avoid overloading the bus.
8	$V_{CC}$	3.0V to 5.5V Power Supply. Adding a 0.1 $\mu$ F decoupling capacitor between the $V_{CC}$ pin and the GND pin is recommended.

## THEORY OF OPERATION

### IEC ESD PROTECTED RS-485

The ADM3065E/ADM3066E/ADM3067E/ADM3068E are 3.0 V to 5.5 V, 50 Mbps RS-485 transceivers with IEC 61000-4-2 Level 4 ESD protection on the bus pins. The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E can withstand up to  $\pm 12$  kV contact discharge on transceiver bus pins (A, B, Y, and Z) without latch-up or damage. The ADM3061E/ADM3062E/ADM3063E has the same robust IEC 61000-4-2 ESD protection as the ADM3065E/ADM3066E/ADM3067E/ADM3068E models and operate at a lower, 500 kbps data rate.

### HIGH DRIVER DIFFERENTIAL OUTPUT VOLTAGE

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E have characteristics that are optimized for use in PROFIBUS applications. When powered at  $V_{CC} \geq 4.5$  V, the ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E driver output differential voltage meets or exceeds the PROFIBUS requirements of 2.1 V with a  $54 \Omega$  load.

### IEC 61000-4-2 ESD PROTECTION

ESD is the sudden transfer of electrostatic charge between bodies at different potentials caused either by near contact or induced by an electric field. It has the characteristics of high current in a short time period. The primary purpose of the IEC 61000-4-2 test is to determine the immunity of systems to external ESD events outside the system during operation. IEC 61000-4-2 describes testing using two coupling methods: contact discharge and air discharge. Contact discharge implies a direct contact between the discharge gun and the equipment under test (EUT). During air discharge testing, the charged electrode of the discharge gun is moved toward the EUT until a discharge occurs as an arc across the air gap. The discharge gun does not make direct contact with the EUT. A number of factors affect the results and repeatability of the air discharge test, including humidity, temperature, barometric pressure, distance, and rate of approach to the EUT. This method is a more accurate representation of an actual ESD event but is not as repeatable. Therefore, contact discharge is the preferred test method.

During testing, the data port is subjected to at least 10 positive and 10 negative single discharges. Selection of the test voltage is dependent on the system end environment.

Figure 45 shows the 8 kV contact discharge current waveform as described in the IEC 61000-4-2 specification. Some of the key waveform parameters are rise times of less than 1 ns and pulse widths of approximately 60 ns.

Figure 45. IEC 61000-4-2 ESD Waveform (8 kV)

Figure 46 shows the 8 kV contact discharge current waveform from the IEC 61000-4-2 standard compared to the HBM ESD 8 kV waveform. Figure 46 shows that the two standards specify a different waveform shape and peak current. The peak current associated with an IEC 61000-4-2 8 kV pulse is 30 A, whereas the corresponding peak current for HBM ESD is more than five times less, at 5.33 A. The other difference is the rise time of the initial voltage spike, with the IEC 61000-4-2 ESD waveform having a much faster rise time of 1 ns, compared to the 10 ns associated with the HBM ESD waveform. The amount of power associated with an IEC ESD waveform is much greater than that of an HBM ESD waveform. The HBM ESD standard requires the EUT to be subjected to three positive and three negative discharges, whereas the IEC ESD standard requires 10 positive and 10 negative discharge tests.

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E with IEC 61000-4-2 ESD ratings is better suited for operation in harsh environments compared to other RS-485 transceivers that state varying levels of HBM ESD protection.

Figure 46. IEC 61000-4-2 ESD Waveform 8 kV Compared to HBM ESD Waveform 8 kV

**TRUTH TABLES**

Table 12 and Table 13 use the abbreviations shown in Table 11.

**Table 11. Truth Table Abbreviations**

Letter	Description
H	High level
I	Indeterminate
L	Low level
X	Any state
Z	High impedance (off)

**Table 12. Transmitting Truth Table**

Supply Status		Inputs			Outputs	
V <sub>IO</sub> <sup>1</sup>	V <sub>CC</sub>	$\overline{\text{RE}}$	DE	DI	A/Y	B/Z
On	On	X	H	H	H	L
On	On	X	H	L	L	H
On	On	X	L	X	Z	Z
Off	On	X	X	X	I	I
On	Off	X	X	X	Z	Z
Off	Off	X	X	X	Z	Z

<sup>1</sup> For the ADM3061E, ADM3063E, ADM3065E, and ADM3067E, the V<sub>IO</sub> pin is not applicable.

**Table 13. Receiving Truth Table**

Supply Status		Inputs		Outputs	
V <sub>IO</sub> <sup>1</sup>	V <sub>CC</sub>	A – B	$\overline{\text{RE}}$	DE	RO
On	On	>–0.03 V	L	X	H
On	On	<–0.2 V	L	X	L
On	On	–0.2 V ≤ A – B ≤ –0.03 V	L	X	I
On	On	Inputs open/shorted	L	X	H
On	On	X	H	X	Z
On	Off	X	L	X	I
On	Off	X	H	X	Z
Off	On	X	L	X	I
Off	Off	X	X	X	I

<sup>1</sup> For the ADM3061E, ADM3063E, ADM3065E, and ADM3067E, the V<sub>IO</sub> pin is not applicable.

**RECEIVER FAIL-SAFE**

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E guarantee a logic high receiver output when the receiver inputs are shorted, open, or connected to a terminated transmission line with all drivers disabled. This receiver output is achieved by setting the receiver input threshold between –30 mV and –200 mV. If the differential receiver input voltage (A – B) is greater than or equal to –30 mV, the RO pin is logic high.

If the (A – B) input is less than or equal to –200 mV, RO is logic low. In the case of a shorted, open circuit or terminated bus with all transmitters disabled, the receiver differential input voltage is pulled to 0 V, resulting in a logic high with a 30 mV minimum noise margin.

**HOT SWAP CAPABILITY**

When a circuit board is inserted into a powered (or hot) backplane, differential disturbances to the data bus can lead to data errors. During this period, processor logic output drivers are high impedance and are unable to drive the DE and RE inputs of the RS-485 transceivers to a defined logic level. Leakage currents up to ±10 μA from the high impedance state of the processor logic drivers can cause standard complementary metal-oxide semiconductor (CMOS) enable inputs of a transceiver to drift to an incorrect logic level. Additionally, parasitic circuit board capacitance can cause coupling of V<sub>CC</sub> or GND to the enable inputs. Without the hot swap capability, these factors can improperly enable the driver or receiver of the transceiver. When V<sub>CC</sub> or V<sub>IO</sub> rises, an internal pull-down circuit holds DE low and RE high. After the initial power-up sequence, the pull-down circuit becomes transparent, resetting the hot swap tolerable input.

**128 TRANSCEIVERS ON THE BUS**

The standard RS-485 receiver input impedance is 12 kΩ (one unit load), and the standard driver can drive up to 32 unit loads. The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E transceivers have a one fourth unit load receiver input impedance (48 kΩ), allowing up to 128 transceivers to be connected in parallel on one communication line. Any combination of these devices and other RS-485 transceivers with a total of 32 unit loads or fewer can be connected to the line.

**DRIVER OUTPUT PROTECTION**

The ADM3061E/ADM3062E/ADM3063E/ADM3065E/ADM3066E/ADM3067E/ADM3068E feature two methods to prevent excessive output current and power dissipation caused by faults or by bus contention. Current-limit protection on the output stage provides immediate protection against short circuits over the whole common-mode voltage range. In addition, a thermal shutdown circuit forces the driver outputs into a high impedance state if the die temperature rises excessively. This circuitry is designed to disable the driver outputs when a die temperature of 150°C is reached. As the device cools, the drivers are reenabled at a temperature of 140°C.

## APPLICATIONS INFORMATION

The ADM3061E/ADM3065E transceiver is designed for bidirectional data communications on multipoint bus transmission lines. Figure 47 shows a typical network applications circuit.

To minimize reflections, terminate the line at both ends with a termination resistor (the value of the termination resistor must be equal to the characteristic impedance of the cable used) and keep stub lengths off the main line as short as possible.

### NOTES

1. THE MAXIMUM NUMBER OF NODES IS 128.
2.  $R_T$  IS EQUAL TO THE CHARACTERISTIC IMPEDANCE OF THE CABLE USED.

Figure 47. ADM3061E/ADM3065E Typical Half-Duplex RS-485 Communications Network

**ISOLATED HIGH SPEED RS-485 NODE**

Galvanic isolation, with reinforced insulation and 5 kV rms transient withstand voltage, can be added to the ADM3065E using Analog Devices, Inc., *iCoupler*® and *isoPower*® technology. The ADuM6401 provides the required quad channels of 5 kV rms signal isolation, operating at rates up to 25 Mbps, together with an integrated dc-to-dc converter. The ADuM6401 combines with the ADM3065E (shown in Figure 48) with the V<sub>ISO</sub> pin configured for 3.3 V by connecting the V<sub>SEL</sub> pin to GND<sub>ISO</sub> and a 5 V supply connected to V<sub>DD1</sub>. Operation at 3.3 V ensures the ADM3065E remains within the load capability of ADuM6401 even at 25 Mbps.

The dc-to-dc converter in the ADuM6401 *isoPower* device provides regulated, isolated power to the ADM3065E (and the ADuM241D). These *isoPower* devices use high frequency

switching elements to transfer power through the transformers. Take care during PCB layout to meet emissions standards. See the AN-0971 Application Note for PCB layout recommendations.

Galvanic isolation of the ADM3065E at the full data rate, up to 50 Mbps, can be implemented using the ADuM241D quad-channel digital isolator and the ADuM6028 isolated dc-to-dc converter, as shown in Figure 49. The ADuM6028 is an 8-pin device that contains a 300 mW dc-to-dc converter optimized to meet emissions standards on a 2-layer PCB using two ferrite beads. The ADuM241D operates at a data rate up to 150 Mbps, and offers the precise timing required to fully support the ADM3065E at 50 Mbps.

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
