

PI3HDX1204E

HDMI 2.0 6Gbps Linear Redriver Level Shifter Near to the Sink/DFE-side application

Description

PI3HDX1204E is the HDMI 2.0 Linear Redriver with the Level Shifter, supporting the minimum additive jitters. The linear Redriver provides the easiness of handling the signal integrity issues known in the component placement and the setting parameters of Equalization and Flat Gain compensation between Source-side and Sink-side link system.

The advantage of Linear Redriver does not block the original source differential signals to maximize the Sink-side Receiver Digital Feedback Equalization (DFE) Feedback circuits to improve the high-speed linked signal quality. The output swing range can set by Swing control for the power saving.

The optimization of the signal quality over a variety of physical mediums by reducing Inter-symbol Interference (ISI) jitters can be done by the pin-strapping or I2C programming.

In EEPROM mode, the Equalization, Voltage Swing and Gain controls can be automatically loaded during the system power-up to eliminate the need of external microprocessor or software driver.

Features

- **HDMI 2.0 Compliant TMDS Linear Redriver with 2x Improved Jitter Performance than conventional technology**
- **DP++ Level Shifting for HDMI output**
- **Linear Redriver increases TMDS Link Margin supporting Sink-side DFE (Decision Feedback Equalizers) receiver**
- **Every Channel's Equalizations, Swings and Gains are programmable Independently**
- **Support Pin- strap and I2C Programming**
- **Flexible 4-bit I2C address selectable (42-pin, ZH package)**
- **Power supply: 3.3V**
- **Package (Pb-Free & Green):**
 - 32-pin TQFN (3x6mm)
 - 42-pin TQFN (3.5x9mm)

Applications

- **TVs and Monitors near to the Sink-side Devices**

Figure 1. Monitor for sink-side with Rx DFE receiver

Ordering Information

Ordering Number	Package Code	Eco Plan
PI3HDX1204E ZLEX	ZL	Pb-free & Green, 32-pin TQFN
PI3HDX1204E ZHEX	ZH	Pb-free & Green, 42pin TQFN

2. General Information

2.1 Revision History

Revision	Description
March 2016	Pin-out (p8): FGx(x=0,1) Pin name typo fixed.
April 2016	Electrical(p17): tSK_INTRA_OUT changed 5 typ, 10 max ps
May 2016	Application(p30): More informative system EE contents added. DDC source-side pull-up changed to 10 kOhm from 2 kOhm
June 2016	Mechanical (p39): EPAD outline changed
Oct 2016	Diodes Disclaimer added
Aug 2017	Clarified Output Swing range control in functional description. PI3HDX1204B1 limiting and PI3HDX1204E linear pin-out comparison added in generic information session
Dec 2017	Updated package mechanical drawing with latest (p46).

2.2 PI3HDX1204D to PI3HDX1204E PDN Notice

PI3HDX1204E is a production part number of PI3HDX1204D. The detail comparison is summarized below.

	PI3HDX1204E	PI3HDX1204D
Changes	32-pin TQFN package added	EOL (End of Life). PI3HDX1204D was engineering version of PI3HDX1204E
Pin-out	No change	
Function control	No change	
Application Note	PI3HDX1204D application note and schematics are applicable to the PI3HDX1204E.	

2.3 Similar Products Comparison

	PI3HDX1204B1	PI3HDX1204E
Redriver Type	Limiting type	Linear type
EQ at 6Gbps	22 dB	10 dB
Output TMDs peak-to-peak Swing	Output Swing Amplitude / Pre-Emphasis control. Blocking type	Follow Source Swing Amplitude. Non-blocking type.
DDC Switch/Buffer	No	No
HDMI1.4/2.0 Type ID	No	No
Ioff Protection	External Power Switch	External Power Switch
Data Rate (Gbps)	6 Gbps	6 Gbps
Application	Near to Source-side device	Near to Sink-side device

3. Pin Configuration

3.1 Package Pin-out

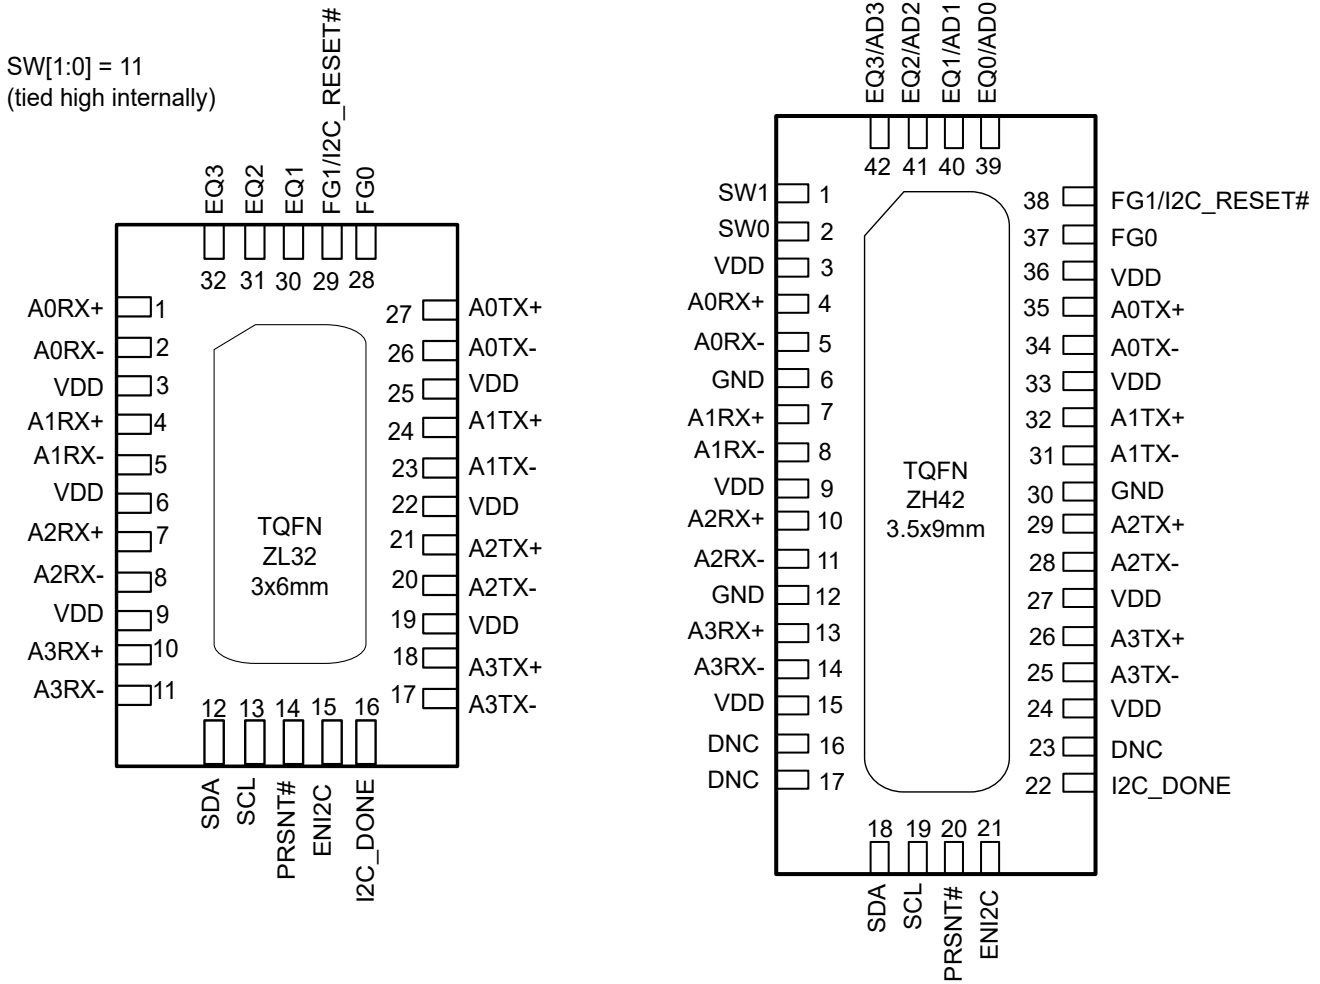

Figure 3-1 32/42-pin package pin-out

Note: In TMDS Data and Clock Differential Pairs of Input and Output, the polarity (+/- or P/N) of each pairs and high-speed data channels A[3:0] can use interchangeably. Output pins of polarity and data channel will always follow the input polarity and data channel assignment changes.

3.2 Pin Description

3.2.1 32-pin package

Pin #	Pin Name	Type	Description
Data Signals			
1 2	A0RX+ A0RX-	I	TMDS differential positive/negative input for Channel A0, with internal 50Ω Pull-Up and ~200kΩ Pull-Up otherwise.
27 26	A0TX+ A0TX-	O	TMDS differential positive/negative outputs for Channel A0, with internal 50Ω Pull-Up and ~2kΩ Pull-Up otherwise.
4 5	A1RX+ A1RX-	I	TMDS differential positive/negative inputs for Channel A1, with internal 50Ω Pull-Up and ~200kΩ Pull-Up otherwise.
24 23	A1TX+ A1TX-	O	TMDS differential positive/negative outputs for Channel A1, with internal 50Ω Pull-Up and ~2kΩ Pull-Up otherwise.
7 8	A2RX+ A2RX-	I	TMDS differential positive/negative inputs for Channel A2, with internal 50Ω Pull-Up and ~200kΩ Pull-Up otherwise.
21 20	A2TX+ A2TX-	O	TMDS differential positive/negative outputs for Channel A2, with internal 50Ω Pull-Up and ~2kΩ Pull-Up otherwise.
10 11	A3RX+ A3RX-	I	TMDS differential positive/negative inputs for Channel A3, with internal 50Ω Pull-Up and ~200kΩ Pull-Up otherwise.
18 17	A3TX+ A3TX-	O	TMDS differential positive/negative outputs for Channel A3, with internal 50Ω Pull-Up and ~2kΩ Pull-Up otherwise.
Control Signals			
12	SDA	I/O	I ² C Serial Data line
13	SCL	I/O	I ² C Serial Clock line In Master mode (ENI2C pin floating), SCL is an output. Otherwise it is an input as a slave mode.
14	PRSNT#	I	Cable Present Detect input. This pin has internal 100KΩ pull-up. The pin is active when both PIN mode (ENI2C = LOW) and I2C mode (ENI2C = HIGH). When High, a cable is not present, and the device is put in lower power mode. When Low, the device is enabled and in normal operation.
15	ENI2C	I	I2C Enable pin. When LOW, each channel is programmed by the external pin voltage. When HIGH, each channel is programmed by the data stored in the I ² C bus. When floating, master mode (Read External EEPROM)
32,31,30	EQ[3:1]	I	EQ Control pin. Inputs with internal 100kΩ pull-up. This pins set the amount of Equalizer Boost in all channels when ENI2C is low.
	AD[3:1]	I	Address bits control pins for I2C programming with internal 100kΩ pull-up.

Pin #	Pin Name	Type	Description
29	FG1/I2C_RE-SET#	I	Shared pin for Gain Control bit-1 and I2C Reset pin. Inputs with internal 100kΩ pull up resistor. (1) Sets the output flat gain level bit-1 on all channels when ENI2C is Low. (2) I2C Reset pin. Active Low to reset the registers to default state.
28	FG0	I	Flat Gain control bit-0 pin. Inputs with internal 100kΩ pull up resistor. Sets the output flat gain level on all channels when ENI2C is low.
16	I2C_DONE	O	I2C Done pin. Valid register load status output for using the daisy chain I2C master. Low = External EEPROM load failed High = External EEPROM load passed
Power Pins			
3,6,9,19,22,25	VDD	PWR	3.3V Power supply pins
Center Pad	GND	GND	Exposed Ground pad.

3.2.2 42-pin package

Pin #	Pin Name	Type	Description
Data Signals			
4 5	A0RX+ A0RX-	I	TMDS differential positive/negative input for Channel A0, with internal 50Ω Pull-Up and ~200kΩ Pull-Up otherwise.

4. Functional

4.1 Functional Block

Figure 4-1 Functional Block Diagram

4.2 Function Description

4.2.1 Power-Down/Enable

When PRSNT# is set to "1", device enter to the power-down mode. When Input 200kΩ and Output High Impedance (HIZ) termination resisters set, each individual channels Ax(x=0,1,2,3) can program the I2C register.

4.2.2 Input Equalization Setting

The EQx(x=0,1,2,3) pins are the pin-strap option for each Ax(x=0,1,2,3) channels. It can also be programmable by the I2C mode.

Table 4-1. Equalization Setting for 42-pin

EQ3	EQ2	EQ1	EQ0	6Gbps Input(dB)
0	0	0	0	3.6
0	0	0	1	4.0
0	0	1	0	4.4
0	0	1	1	4.7
0	1	0	0	5.1
0	1	0	1	5.5
0	1	1	0	5.9
0	1	1	1	6.2
1	0	0	0	6.6
1	0	0	1	6.9
1	0	1	0	7.3
1	0	1	1	7.6
1	1	0	0	8.0
1	1	0	1	8.2
1	1	1	0	8.6
1	1	1	1	8.9

Table 4-2. Equalization Setting for 32-pin

EQ3	EQ2	EQ1	6 Gbps Input EQ(dB)	Notes
0	0	0	4.0	(1) EQ0 pin always tied to "1" internally in 32-pin package.
0	0	1	4.7	
0	1	0	5.5	
0	1	1	6.2	
1	0	0	6.9	
1	0	1	7.6	
1	1	0	8.2	
1	1	1	8.9	

4.2.3 Output -1 dB Compression Swing setting

SW_x(x=0,1) affects the linearity of the output when input amplitude changes.

Table 4-3. SW[1:0] Output Swing Setting

SW1	SW0	Voltage Swing mVpp @100MHz	Voltage Swing mVpp @ 6Gbps	Notes
0	0	920	1100	
0	1	1040	1200	
1	0	1280	1300	
1	1	1370	1400	Default Setting. Internally 100kΩ pull-up.

Note

(1) SW[1:0]=11 setting support by I2C programming in 32-pin package

4.2.4 Flat Gain Setting

FG_x(x=0,1) two pins are the selection 2 bits for the DC Flat Gain value.

Table 4-4. Flat Gain FG[1:0] Control

FG1	FG0	Gain (dB)
0	0	-3.5 dB
0	1	-1.5 dB
1	0	+0.5 dB
1	1	+2.5 dB

5.2 I2C operation

The integrated I2C interface operates as a slave device mode. Standard I2C mode (100 Kbps) is supported with 7-bit addressing and data byte format 8-bit.

The device supports Read/Write. The bytes must be accessed in sequential order from the lowest to the highest byte with the ability to stop after any complete byte has been transferred. Address bits A3 to A0 are programmable to support multiple chips environment. The Data is loaded until a Stop sequence is issued.

Figure 5-1 I2C Reset, Enable and SCL/SDA Timing Diagram

Transferring Data

Every byte put on the SDA line must be 8-bit long. Each byte has to be followed by an acknowledge bit. Data is transferred with the most significant bit (MSB) first (see the I2C Data Transfer diagram). It will never hold the clock line SCL LOW to force the master into a wait state.

Acknowledge

Data transfer with acknowledge is required from the master. When the master releases the SDA line (HIGH) during the acknowledge clock pulse, it will pull down the SDA line during the acknowledge clock pulse so that it remains stable LOW during the HIGH period of this clock pulse as indicated in the I2C Data Transfer diagram. It will generate an acknowledge after each byte has been received.

Data Transfer

A data transfer cycle begins with the master issuing a start bit. After recognizing a start bit, it will watch the next byte of information for a match with its address setting. When a match is found it will respond with a read or write of data on the following clocks. Each byte must be followed by an acknowledge bit, except for the last byte of a read cycle which ends with a stop bit. Data is transferred with the most significant bit (MSB) first.

Start & Stop Conditions

A HIGH to LOW transition on the SDA line while SCL is HIGH indicates a START condition. A LOW to HIGH transition on the SDA line while SCL is HIGH defines a STOP condition.

Table 5-1. I2C Address Setting with 4-bits AD[3:0]

I2C address: AD3, AD2, AD1, AD0	Data starting location
0000	00H
0001	10H
0010	20H
0011	30H

6. Electrical Specification

6.1 Absolute Maximum ratings

Supply Voltage to Ground Potential	-0.5 V to +4.6 V
DC SIG Voltage	-0.5 V to $V_{DD} + 0.5$ V
Output Current	-25 mA to +25 mA
Power Dissipation Continuous	2.1 W
ESD, HBM	-2 kV to +2 kV
Storage Temperature	-65 °C to +150 °C

Note
Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

6.2 Recommended operating conditions

Parameter	Min.	Typ.	Max	Units
Power supply voltage (VDD to GND) ⁽¹⁾	3.0	3.3	3.6	V
I2C (SDA, SCL)			3.6	V
Supply Noise Tolerance up to 25 MHz ⁽²⁾			100	mVp-p
Ambient Temperature	-40	25	85	°C

Note
(1) Typical parameters are measured at $V_{CC} = 3.3 \pm 0.3$ V, $T_A = 25^\circ\text{C}$. They are for the reference purposes, and are not production-tested
(2) Allow supply noise (mVp-p sine wave) under typical condition

6.3 Electrical characteristics

Over recommend operating supply and temperature range unless otherwise specified.

6.3.1 LVCMOS DC specifications

Symbol	Parameter	Conditions	Min.	Typ.	Max	Unit
V_{IH}	DC input logic high		$V_{DD}/2 + 0.7$		$V_{DD} + 0.3$	V
V_{IL}	DC input logic low		-0.3		$V_{DD}/2 - 0.7$	V
V_{OH}	At $I_{OH} = -200\mu\text{A}$		$V_{DD} + 0.2$			V
V_{OL}	At $I_{OL} = -200\mu\text{A}$				0.2	V
V_{hys}	Hysteresis of Schmitt trigger input		0.8			V

6.3.2 Power Dissipation

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
I_{DD}	Supply current	PRSENT#=0, SW=1000mVdiff, FG=2.5		256	290	mA
		PRSENT#=0, SW=900mVdiff, FG=2.5		240		mA
		PRSENT#=0, SW=800mVdiff, FG=2.5		233		mA
I_{DDQ}	Quiescent supply current	PRSENT#=1, TMDS Output Disable		2.0	4.2	mA

6.3.3 Package power ratings

Package	Theta Ja(still air) (°C/W)	Theta Jc (°C/W)	Max. Power Dissipation Rating Ta ≤ 70°
32-pin TQFN (ZL32)	37.05	11.3	1.48W

7.5 Layout Guidelines

As transmission data rate increases rapidly, any flaws and/or mis-matches on PCB layout are amplified in terms of signal integrity. Layout guideline for high-speed transmission is highlighted in this application note.

7.5.1 Power and Ground

To provide a clean power supply for high-speed device, few recommendations are listed below:

- Power (VDD) and ground (GND) pins should be connected to corresponding power planes of the printed circuit board directly without passing through any resistor.
- The thickness of the PCB dielectric layer should be minimized such that the VDD and GND planes create low inductance paths.
- One low-ESR 0.1uF decoupling capacitor should be mounted at each VDD pin or should supply bypassing for at most two VDD pins. Capacitors of smaller body size, i.e. 0402 package, is more preferable as the insertion loss is lower. The capacitor should be placed next to the VDD pin.
- One capacitor with capacitance in the range of 4.7uF to 10uF should be incorporated in the power supply decoupling design as well. It can be either tantalum or an ultra-low ESR ceramic.
- A ferrite bead for isolating the power supply for Pericom high-speed device from the power supplies for other parts on the printed circuit board should be implemented.
- Several thermal ground vias must be required on the thermal pad. 25-mil or less pad size and 14-mil or less finished hole are recommended.

Figure 7-8 Decoupling Capacitor Placement Diagram

7.5.2 High-speed signal Routing

Well-designed layout is essential to prevent signal reflection:

- For 90Ω differential impedance, width-spacing-width micro-strip of 6-7-6 mils is recommended; for 100Ω differential impedance, width-spacing-width micro-strip of 5-7-5 mils is recommended.
- Differential impedance tolerance is targeted at ±15%.

Figure 7-9 Trace Width and Clearance of Micro-strip and Strip-line

- For micro-strip, using 1/2oz Cu is fine. For strip-line in 6+ PCB layers, 1oz Cu is more preferable.

Figure 7-10 4-Layer PCB Stack-up Example

Figure 7-11 6-Layer PCB Stack-up Example

- Ground referencing is highly recommended. If unavoidable, stitching capacitors of 0.1uF should be placed when reference plane is changed.

Figure 7-12 Stitching Capacitor Placement

- To keep the reference unchanged, stitching vias must be used when changing layers.
- Differential pair should maintain symmetrical routing whenever possible. The intra-pair skew of micro-strip should be less than 5 mils.
- To keep the reference unchanged, stitching vias must be used when changing layers.
- Differential pair should maintain symmetrical routing whenever possible. The intra-pair skew of micro-strip should be less than 5 mils.

Figure 7-13 Layout Guidance of Matched Differential Pair

- For minimal crosstalk, inter-pair spacing between two differential micro-strip pairs should be at least 20 mils or 4 times the dielectric thickness of the PCB.
- Wider trace width of each differential pair is recommended in order to minimize the loss, especially for long routing. More consistent PCB impedance can be achieved by a PCB vendor if trace is wider.
- Differential signals should be routed away from noise sources and other switching signals on the printed circuit board.

- To minimize signal loss and jitter, tight bend is not recommended. All angles α should be at least 135 degrees. The inner air gap A should be at least 4 times the dielectric thickness of the PCB.

Figure 7-14 Layout Guidance of Bends

- Stub creation should be avoided when placing shunt components on a differential pair.

Figure 7-15 Layout Guidance of Shunt Component

- Placement of series components on a differential pair should be symmetrical.

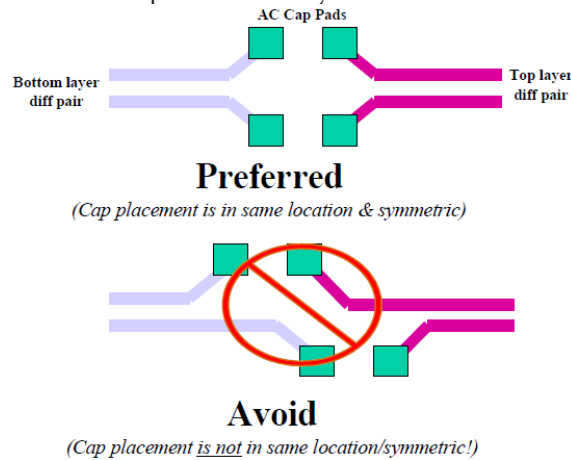

Figure 7-16 Layout Guidance of Series Component

- Stitching vias or test points must be used sparingly and placed symmetrically on a differential pair.

Figure 7-17 Layout Guidance of Stitching Via

8.3 Tape & Reel Materials and Design

8.3.1 Carrier Tape

The Pocketed Carrier Tape is made of Conductive Polystyrene plus Carbon material (or equivalent). The surface resistivity is $10^6 \Omega/\text{sq}$. maximum. Pocket tapes are designed so that the component remains in position for automatic handling after cover tape is removed. Each pocket has a hole in the center for automated sensing if the pocket is occupied or not, thus facilitating device removal. Sprocket holes along the edge of the center tape enable direct feeding into automated board assembly equipment. See Figures 3 and 4 for carrier tape dimensions.

8.3.2 Cover Tape

Cover tape is made of Anti-static Transparent Polyester film. The surface resistivity is $10^7 \Omega/\text{sq}$. Minimum to 10^{11} Ohm sq . maximum. The cover tape is heat-sealed to the edges of the carrier tape to encase the devices in the pockets. The force to peel back the cover tape from the carrier tape shall be a MEAN value of 20 to 80gm (2N to 0.8N).

8.3.3 Reel

The device loading orientation is in compliance with EIA-481, current version (Figure 2). The loaded carrier tape is wound onto either a 13-inch reel, (Figure 4) or 7-inch reel. The reel is made of Anti-static High-Impact Polystyrene. The surface resistivity $10^7 \Omega/\text{sq}$. minimum to $10^{11} \Omega/\text{sq}$. max.

Figure 8-6 Tape & Reel label information

Figure 8-8 Standard embossed carrier tape dimensions

Table 8-1. Constant Dimensions

Tape Size	D0	D1 (Min)	E1	P0	P2	R (See Note 2)	S1 (Min)	T (Max)	T1 (Max)
8mm	1.5 +0.1 -0.0	1.0	1.75 ± 0.1	4.0 ± 0.1	2.0 ± 0.05	25	0.6	0.6	0.1
12mm		1.5				2.0 ± 0.1			
16mm					2.0				
24mm		2.0				50	N/A (See Note 3)		
32mm					2.0		50		
44mm		2.0				50			

Table 8-2. Variable Dimensions

Tape Size	P1	B1 (Max)	E2 (Min)	F	So	T2 (Max.)	W (Max)	A0, B0, & K0
8mm	Specific per package type. Refer to FR-0221 (Tape and Reel Packing Information)	4.35	6.25	3.5 ± 0.05	N/A (see note 4)	2.5	8.3	See Note 1
12mm		8.2	10.25	5.5 ± 0.05		6.5	12.3	
16mm		12.1	14.25	7.5 ± 0.1		8.0	16.3	
24mm		20.1	22.25	11.5 ± 0.1	12.0	24.3		
32mm		23.0	N/A	14.2 ± 0.1		28.4 ± 0.1	32.3	
44mm		35.0	N/A	20.2 ± 0.15	40.4 ± 0.1	16.0	44.3	

NOTES:

- A0, B0, and K0 are determined by component size. The cavity must restrict lateral movement of component to 0.5mm maximum for 8mm and 12mm wide tape and to 1.0mm maximum for 16,24,32, and 44mm wide carrier. The maximum component rotation within the cavity must be limited to 20o maximum for 8 and 12 mm carrier tapes and 10o maximum for 16 through 44mm.
- Tape and components will pass around reel with radius "R" without damage.
- S1 does not apply to carrier width ≥32mm because carrier has sprocket holes on both sides of carrier where Do≥S1.
- So does not exist for carrier ≤32mm because carrier does not have sprocket hole on both side of carrier.

Table 8-3. Reel dimensions by tape size

Tape Size	A	N (Min) See Note A	W1	W2 (Max)	W3	B (Min)	C	D (Min)
8mm	178 ±2.0mm or 330±2.0mm	60 ±2.0mm or 100±2.0mm	8.4 +1.5/-0.0 mm	14.4 mm	Shall Ac- commo- date Tape Width Without Interfer- ence	1.5mm	13.0 +0.5/-0.2 mm	20.2mm

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
