

Blue Laser Diode in TO90 Package

Version 1.2

PLPT9 450D_E A01

Features

- Typ. emission wavelength 447 nm
- Efficient radiation source for cw and pulsed operation
- TO90 package
- ESD protection diode
- Laser diode isolated against package

Applications

- Laser projection
- Laser shows
- Illumination
- Metrology

Safety Advice

Depending on the mode of operation, these devices emit highly concentrated visible light which can be hazardous to the human eye. Products which incorporate these devices have to follow the safety precautions found in IEC 60825 "Safety of laser products".

ATTENTION – Observe Precautions For Handling – Electrostatic Sensitive Device

Ordering Information

Type:	Optical Output Power $P_{\text{opt}} (T_{\text{case}} = 25\text{ °C})$	Ordering Code
PLPT9 450D_E A01	3.5 W	Q65112A4348

Maximum Ratings

Operation outside these conditions may damage the device. Operation at the maximum ratings may influence lifetime.

Parameter	Symbol	Values		Unit
		min.	max.	
Operating Temperature ^{1) page 9}	T_{C}	-40	+120	°C
Storage Temperature	T_{stg}	-40	+135	°C
Junction Temperature	T_{j}		160	°C
Optical Output Power $T_{\text{C}} \leq 60\text{ °C}$	P_{opt}		3.7	W
Forward Current ^{1) page 9} $T_{\text{C}} = 25\text{ °C}$	I_{F}		2.6	A
Reverse Current	I_{R}		20	mA
Soldering Temperature max. 10 sec.	T_{solder}		260	°C

Laser Characteristics ($T_{\text{C}} = 25\text{ °C}$)

Parameter	Symbol	Values ^{2) page 9}			Unit
		min.	typ.	max.	
Center Wavelength ($P_{\text{opt}} = 3.5\text{ W}$) ^{3) page 9}	λ_{center}	440	447	455	nm
Threshold Current	I_{th}	–	0.25	0.40	A
Optical Output Power ($I_{\text{F}} = 2.2\text{ A}$) ^{3) page 9}	P_{opt}	–	3.5	–	W
Forward Current ($P_{\text{opt}} = 3.5\text{ W}$) ^{3) page 9}	I_{F}	–	2.2	2.5	A
Forward Voltage ($P_{\text{opt}} = 3.5\text{ W}$) ^{3) page 9}	V_{F}	–	–	5.5	V
Beam Divergence ($P_{\text{opt}} = 3.5\text{ W}$) Full angle at $1/e^2$ from peak intensity	$\theta_{\parallel}$ $\theta_{\perp}$	6 41	9 49	13 57	deg
Polarization ($P_{\text{opt}} = 3.5\text{ W}$)	PR	–	100:1	–	TE:TM
Thermal Resistance (junction to case)	R_{th}	–	9	–	K/W
Total Power Dissipation	P_{tot}	–	6.5	–	W

1: Cathode
2: Anode

A circuit diagram showing a Zener Diode and a Laser Diode connected in parallel between terminals 1 and 2. The Zener Diode is oriented with its cathode towards terminal 1, and the Laser Diode is oriented with its anode towards terminal 1. Arrows at the bottom of the Laser Diode symbol indicate light emission.

Disclaimer

Attention please!

The information describes the type of component and shall not be considered as assured characteristics.

Terms of delivery and rights to change design reserved. Due to technical requirements components may contain dangerous substances.

For information on the types in question please contact our Sales Organization.

If printed or downloaded, please find the latest version in the Internet.

Packing

Please use the recycling operators known to you. We can also help you – get in touch with your nearest sales office.

By agreement we will take packing material back, if it is sorted. You must bear the costs of transport. For packing material that is returned to us unsorted or which we are not obliged to accept, we shall have to invoice you for any costs incurred.

Components used in life-support devices or systems must be expressly authorized for such purpose!

OSRAM OS components are not developed, constructed or tested for the application as safety relevant component or for the application in medical devices.

In case Buyer – or Customer supplied by Buyer– considers using OSRAM OS components in product safety devices/applications or medical devices/applications, Buyer and/or Customer has to inform the local sales partner of OSRAM OS immediately and OSRAM OS and Buyer and /or Customer will analyze and coordinate the customer-specific request between OSRAM OS and Buyer and/or Customer.

*) A critical component is a component used in a life-support device or system whose failure can reasonably be expected to cause the failure of that life-support device or system, or to affect its safety or the effectiveness of that device or system.

**) Life support devices or systems are intended (a) to be implanted in the human body, or (b) to support and/or maintain and sustain human life. If they fail, it is reasonable to assume that the health and the life of the user may be endangered.

Important notes of operation for laser diode

a) Electrical operation

OSRAMs laser diodes are designed for maximum performance and reliability. Operating the laser diode above the maximum rating even for very short periods of time can damage the laser diode or reduce its lifetime. The laser diode must be operated with a suitable power supply with minimized electrical noise.

The laser diode is very sensitive to electrostatic discharge (ESD). Proper precautions must be taken.

b) Mounting instructions

In order to maintain the lifetime of the laser diode proper heat management is essential. Due to the design of the laser diode heat is dissipated only through the base plate of the diode's body. A proper heat conducting interconnection between the diodes base plate and the heat sink must be maintained.

Glossary

- 1) **Case temperatures:** At case temperature higher than 60°C we recommend a derating of the maximum operation current in order to not exceed the maximum junction temperature T_j .
- 2) **Typical values:** Due to the special conditions of the manufacturing processes of laser diodes, the typical data or calculated correlations of technical parameters can only reflect statistical figures. These do not necessarily correspond to the actual parameters of each single product, which could differ from the typical data and calculated correlations or the typical characteristic line. If requested, e.g. because of technical improvements, these typ. data will be changed without any further notice.
- 3) **Reproducibility:** P_{opt} , λ_{center} , and V_F is measured with an internal reproducibility of $\pm 7\%$, ± 0.3 nm, and ± 0.05 V, respectively (acc. to GUM with a coverage factor of $k = 3$).

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
