Adjustable Slew Rate (ON2 Pin 2 and ON1 Pin3)

SLG59M1512V has a built in configurable slew control feature. The configurable slew control uses current detection method on ON1/ON2. When ON voltage rise above ON_VIH_INI (1.2 V typical), the slew control circuit will measure the current flowing into ON1/ON2. Based on the current flowing into ON1/ON2, different slew rates will be selected by the internal control circuit. See I_{ON} vs. Tslew table. The slew rate is configurable by selecting a different R1/R2 resistor value as shown on application diagram. Calculating the R1/R2 value depends on both the desired slew rate, and the VOH level of the device driving the ON1/ON2 pin.

$$\text{ON_Current} = (\text{GPIO_VOH} - \text{ON_VREF (1.05 V typical)}) / R$$
