

General purpose input/output rail-to-rail low-power operational amplifiers

Datasheet - production data

Features

- Operating range $V_{CC} = 2.5\text{ V to }6\text{ V}$
- Rail-to-rail input and output
- Extended V_{icm} ($V_{DD} - 0.2\text{ V to }V_{CC} + 0.2\text{ V}$)
- Capable of driving a $32\ \Omega$ load resistor
- High stability: 500 pF
- Operating temperature range: $-40\text{ to }125\text{ }^\circ\text{C}$

Related products

- See LMV321L, LMV358L, LMV324L for newer technology version
- See TSV851, TSV852, TSV854 for enhanced performances

Applications

- Battery powered applications
- Audio driver (headphone driver)
- Sensor signal conditioning
- Laptop/notebook computers

Description

The TSV358, TSV358A, TSV324, and TSV324A (dual and quad) devices are low voltage versions of the LM358 and LM324 commodity operational amplifiers. The TSV321 and TSV321A are the single version. All devices operate with voltages as low as 2.5 V and feature both I/O rail-to-rail.

The common mode input voltage extends 200 mV beyond the supply voltages at $25\text{ }^\circ\text{C}$ while the output voltage swing is within 100 mV of each rail with a $600\ \Omega$ load resistor. At $V_{CC} = 3\text{ V}$, these devices offer 1.3 MHz of gain bandwidth product and provide high output current capability with a typical value of 80 mA .

These features make the TSV3xx and TSV3xxA family ideal for active filters, general purpose low voltage applications, and general purpose portable devices.

Notes:

- ⁽¹⁾All voltage values, except the differential voltage are with respect to the network terminal.
- ⁽²⁾The differential voltage is the non-inverting input terminal with respect to the inverting input terminal. If $V_{id} > \pm 1$ V, the maximum input current must not exceed ± 1 mA. When $V_{id} > \pm 1$ V, an input series resistor must be added to limit input current.
- ⁽³⁾Short-circuits can cause excessive heating and destructive dissipation. R_{th} are typical values.
- ⁽⁴⁾Human body model: 100 pF discharged through a 1.5 kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- ⁽⁵⁾Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
- ⁽⁶⁾Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to ground.
- ⁽⁷⁾Short-circuits from the output to V_{CC} can cause excessive heating. The maximum output current is approximately 80 mA, independent of the magnitude of V_{CC} . Destructive dissipation can result from simultaneous short-circuits on all amplifiers.

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
