

## LED Driver with One Wire Control and Output Disconnect

### WARNING!

DO NOT LOOK AT OPERATING LED.

This circuit produces light that can damage eyes.

### DESCRIPTION

Demonstration circuit 1224 is a LED Driver with One Wire Control and Output Disconnect featuring the LT3593. The LT3593 is a step-up current mode DC/DC converter designed to drive up to 10 white LEDs in series from a Li-Ion cell. The demo board has two sections. The top section showcases the small size LED drive. The maximum current is 20mA. The bottom section is the control section that generates pulses for the CTRL pin of the LED driver. The number of pulses and its timing determine the current and brightness of the LEDs.

The LCD display in the bottom section shows the status of the commanding LED current level in the format as “LEVEL=value” and LED current level as “ILED=value”. The LEVEL value responses to the UP button SW1 and DOWN button SW2 immedi-

ately. The ILED value only changes to the commanding LEVEL value after the SEND/STORE button SW3 is pushed. Pushing SEND/STORE button also save the LEVEL value in the memory of the micro-controller U2 as the default LED current level.

The LT3593 datasheet gives complete description of the part, operation and application information. The datasheet must be read in conjunction with this quick start guide for working on or modifying the demo circuit 1224.

**Design files for this circuit board are available.  
Call the LTC factory.**

### PERFORMANCE SUMMARY

Specifications are at  $T_A = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
$V_{IN}$	Input Supply Range		3	5		V
+5V	Input Supply for Control Section		4.5	5	5.5	V
$I_{LED\_MAX}$	Maximum Output LED Current		19	20	21	mA
$V_{OUT\_MAX}$	Maximum Output Voltage				40	V
$\eta$	Efficiency	$V_{IN}=5\text{V}$ , 8 White LEDs $V_{IN}=3.6\text{V}$ , 8 White LEDs		81		%
$V_{OPEN}$	Over voltage Protection	LED Open	36	38	40	V
$F_s$	Switching Frequency		0.85	1	1.15	MHz

## QUICK START PROCEDURE

Demonstration circuit 1224 is easy to set up to evaluate the performance of the LT3593. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Place jumpers in the following positions:

**JP1** PIC

2. With power off, connect a 3V to 5V power supply to  $V_{IN}$  and GND.
3. With power off, connect 4.5V to 5.5V power supply to +5V and GND.
4. Connect a string of up to 10 LEDs between LED+ and LED-. The Cathode of the last LED connects to the LED-.

5. Turn on the power at the input.

NOTE . Make sure that the input voltage does not exceed 5V.

6. Turn on the power at +5V.

7. Check for the proper voltages and currents.

NOTE . By default of the demo board, the current is 20mA when power is applied the very first time.

8. Adjust the UP (SW1), DOWN (SW2), SEND/STORE (SW3) to the value of interest between 0 and 32, where ILED=32 gives 20mA, ILED=1 gives 625uA, and ILED=0 shuts down the part.

**Данный компонент на территории Российской Федерации****Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибуторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ Р В 0015-002 и ЭС РД 009
