

**FEATURES**

**Low cost 10-bit DAC**  
**Low cost AD7520 replacement**  
**Linearity: ½ LSB, 1 LSB, or 2 LSB**  
**Low power dissipation**  
**Full 4-quadrant multiplying DAC**  
**CMOS/TTL direct interface**  
**Latch free (protection Schottky not required)**  
**Endpoint linearity**

**APPLICATIONS**

**Digitally controlled attenuators**  
**Programmable gain amplifiers**  
**Function generation**  
**Linear automatic gain controls**

**GENERAL DESCRIPTION**

The AD7533 is a low cost, 10-bit, 4-quadrant multiplying DAC manufactured using an advanced thin-film-on-monolithic-CMOS wafer fabrication process.

Pin and function equivalent to the AD7520 industry standard, the AD7533 is recommended as a lower cost alternative for old AD7520 sockets or new 10-bit DAC designs.

AD7533 application flexibility is demonstrated by its ability to interface to TTL or CMOS, operate on 5 V to 15 V power, and provide proper binary scaling for reference inputs of either positive or negative polarity.

<sup>1</sup> FSR = full-scale range.

<sup>2</sup> Full scale (FS) =  $V_{REF}$ .

<sup>3</sup> Maximum gain change from  $T_A = 25^\circ\text{C}$  to  $T_{MIN}$  or  $T_{MAX}$  is  $\pm 0.1\%$  FSR.

<sup>4</sup> AC parameter, sample tested to ensure specification compliance.

<sup>5</sup> Guaranteed, not tested.

<sup>6</sup> Absolute temperature coefficient is approximately  $-300\text{ ppm}/^\circ\text{C}$ .

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25\text{ }^\circ\text{C}$  unless otherwise noted.

Table 2.

Parameter	Rating
$V_{DD}$ to GND	-0.3 V, +17 V
$R_{FB}$ to GND	$\pm 25$ V
$V_{REF}$ to GND	$\pm 25$ V
Digital Input Voltage Range	-0.3 V to $V_{DD} + 0.3$ V
$I_{OUT1}$ , $I_{OUT2}$ to GND	-0.3 V to $V_{DD}$
Power Dissipation (Any Package)	
To 75°C	450 mW
Derates above 75°C by	6 mW/°C
Operating Temperature Range	
Plastic (JN, JP, KN, KP, LN Versions)	-40°C to +85°C
Hermetic (AQ, BQ, CQ Versions)	-40°C to +85°C
Hermetic (SQ, TE, UQ Versions)	-55°C to +125°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec)	300°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## TERMINOLOGY

### Relative Accuracy

Relative accuracy or endpoint nonlinearity is a measure of the maximum deviation from a straight line passing through the endpoints of the DAC transfer function. It is measured after adjusting for ideal zero and full scale and is expressed in % of full-scale range or (sub) multiples of 1 LSB.

### Resolution

Value of the LSB. For example, a unipolar converter with n bits has a resolution of  $(2^{-n}) (V_{REF})$ . A bipolar converter of n bits has a resolution of  $[2^{-(n-1)}] (V_{REF})$ . Resolution in no way implies linearity.

### Settling Time

Time required for the output function of the DAC to settle to within  $\frac{1}{2}$  LSB for a given digital input stimulus, that is, 0 to full scale.

### Gain Error

Gain error is a measure of the output error between an ideal DAC and the actual device output. It is measured with all 1s in the DAC after offset error is adjusted out and is expressed in LSBs. Gain error is adjustable to zero with an external potentiometer.

### Feedthrough Error

Error caused by capacitive coupling from  $V_{REF}$  to output with all switches off.

### Output Capacitance

Capacity from  $I_{OUT1}$  and  $I_{OUT2}$  terminals to ground.

### Output Leakage Current

Current that appears on  $I_{OUT1}$  terminal with all digital inputs low or on  $I_{OUT2}$  terminal when all inputs are high.

## PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 2. 16-Lead PDIP Pin Configuration

Figure 3. 16-Lead SOIC Pin Configuration

Figure 4. 16-Lead CERDIP Pin Configuration

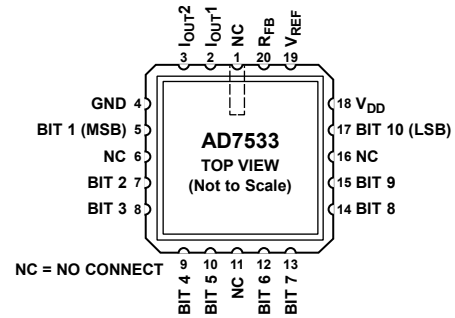

Figure 5. 20-Terminal LCC Pin Configuration

Figure 6. 20-Lead PLCC Pin Configuration

Table 3. Pin Function Descriptions

Pin Number		Mnemonic	Description
16-Lead PDIP, SOIC, CERDIP	20-Lead LCC, PLCC		
1	2	I <sub>OUT1</sub>	DAC Current Output.
2	3	I <sub>OUT2</sub>	DAC Analog Ground. This pin should normally be tied to the analog ground of the system.
3	4	GND	Ground.
4 to 13	5, 7 to 10, 12 to 15, 17	BIT 1 to BIT 10	MSB to LSB.
14	18	V <sub>DD</sub>	Positive Power Supply Input. These parts can be operated from a supply of 5 V to 16 V.
15	19	V <sub>REF</sub>	DAC Reference Voltage Input Terminal.
16	20	R <sub>FB</sub>	DAC Feedback Resistor Pin. Establish voltage output for the DAC by connecting R <sub>FB</sub> to external amplifier output.
NA	1, 6, 11, 16	NC	No Connect.

# CIRCUIT DESCRIPTION

## GENERAL CIRCUIT INFORMATION

The AD7533 is a 10-bit multiplying DAC that consists of a highly stable thin-film R-2R ladder and ten CMOS current switches on a monolithic chip. Most applications require the addition of only an output operational amplifier and a voltage or current reference.

The simplified D/A circuit is shown in Figure 7. An inverted R-2R ladder structure is used, that is, the binarily weighted currents are switched between the I<sub>OUT1</sub> and I<sub>OUT2</sub> bus lines, thus maintaining a constant current in each ladder leg independent of the switch state.

DIGITAL INPUTS (DTL/TTL/CMOS COMPATIBLE)  
Figure 7. Functional Diagram

One of the CMOS current switches is shown in Figure 8. The geometries of Device 1, Device 2, and Device 3 are optimized to make the digital control inputs DTL/TTL/CMOS compatible over the full military temperature range. The input stage drives two inverters (Device 4, Device 5, Device 6, and Device 7), which in turn drive the two output N channels. The on resistances of the switches are binarily sealed so that the voltage drop across each switch is the same. For example, Switch 1 in Figure 8 is designed for an on resistance of 20 Ω, Switch 2 for 40 Ω, and so on. For a 10 V reference input, the current through Switch 1 is 0.5 mA, the current through Switch 2 is 0.25 mA, and so on, thus maintaining a constant 10 mV drop across each switch. It is essential that each switch voltage drop be equal if the binarily weighted current division property of the ladder is to be maintained.

Figure 8. CMOS Switch

## EQUIVALENT CIRCUIT ANALYSIS

The equivalent circuits for all digital inputs high and digital inputs low are shown in Figure 9 and Figure 10. In Figure 9 with all digital inputs low, the reference current is switched to I<sub>OUT2</sub>. The current source I<sub>LEAKAGE</sub> is composed of surface and junction leakages to the substrate, while the I/1024 current source represents a constant 1-bit current drain through the termination resistor on the R-2R ladder. The on capacitance of the output N channel switch is 100 pF, as shown on the I<sub>OUT2</sub> terminal. The off switch capacitance is 35 pF, as shown on the I<sub>OUT1</sub> terminal. Analysis of the circuit for all digital inputs high, as shown in Figure 10, is similar to Figure 9; however, the on switches are now on Terminal I<sub>OUT1</sub>. Therefore, there is the 100 pF at that terminal.

## OPERATION

### UNIPOLAR BINARY CODE

Table 4. Unipolar Binary Operation  
(2-Quadrant Multiplication)

Digital Input		Analog Output ( $V_{OUT}$ as shown in Figure 11)
MSB	LSB	
1	1111111111	$-V_{REF} \left( \frac{1023}{1024} \right)$
1	000000001	$-V_{REF} \left( \frac{513}{1024} \right)$
1	000000000	$-V_{REF} \left( \frac{512}{1024} \right) = \left( \frac{V_{REF}}{2} \right)$
0	1111111111	$-V_{REF} \left( \frac{511}{1024} \right)$
0	000000001	$-V_{REF} \left( \frac{1}{1024} \right)$
0	000000000	$-V_{REF} \left( \frac{0}{1024} \right) = 0$

Nominal LSB magnitude for the circuit of Figure 11 is given by

$$LSB = V_{REF} \left( \frac{1}{1024} \right)$$

**NOTES**

1. R1 AND R2 USED ONLY IF GAIN ADJUSTMENT IS REQUIRED.
2. C1 PHASE COMPENSATION (5pF TO 15pF) MAY BE REQUIRED WHEN USING HIGH SPEED AMPLIFIER.

Figure 11. Unipolar Binary Operation (2-Quadrant Multiplication)

01134-010

### BIPOLAR (OFFSET BINARY) CODE

Table 5. Unipolar Binary Operation  
(4-Quadrant Multiplication)

Digital Input		Analog Output ( $V_{OUT}$ as shown in Figure 12)
MSB	LSB	
1	1111111111	$+V_{REF} \left( \frac{511}{512} \right)$
1	000000001	$+V_{REF} \left( \frac{1}{512} \right)$
1	000000000	0
0	1111111111	$-V_{REF} \left( \frac{1}{512} \right)$
0	000000001	$-V_{REF} \left( \frac{511}{512} \right)$
0	000000000	$-V_{REF} \left( \frac{512}{512} \right)$

Nominal LSB magnitude for the circuit of Figure 12 is given by

$$LSB = V_{REF} \left( \frac{1}{512} \right)$$

**NOTES**

1. R3, R4, AND R5 SELECTED FOR MATCHING AND TRACKING.
2. R1 AND R2 USED ONLY IF GAIN ADJUSTMENT IS REQUIRED.
3. C1 PHASE COMPENSATION (5pF TO 15pF) MAY BE REQUIRED WHEN USING HIGH SPEED AMPLIFIERS.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
