Pin Information

Table 1. Pin Description
(Applies to DIP and SONB packages)

Pin	Symbol	Name/Function
1	TIP	Tip signal from customer.
2	Vs	Supply voltage to gate (-20 V to -80 V).
3	—	Test Point, do not use.
4	RING	Ring signal from customer.
5	PR	Protected ring signal to line-feed-circuitry.
6	GND	Device ground/fault current return.
7	GND	Device ground/fault current return.
8	PT	Protected tip signal to line-feed circuitry.

Note: Pins 1 and 4 must always be connected to the protection resistors shown in Figures 4 and 5 (Line Feed Circuitry). The SLIC can be connected either to the protected outputs (pins 5 and 8) or to the inputs (pins 1 and 4).

Description

The L7591 Subscriber Line Interface Circuit (SLIC) Protector is designed to protect line-feed circuitry from fault-induced lightning and power-cross surge pulses. If a fault current forces TIP and/or RING to a more negative voltage than Vs, current is conducted through the trip circuit. When the specified trip current level is reached, transistors PNP1 and/or PNP2 will turn on and "crowbar" the majority of the current to ground. If similar pulses force TIP and/or RING to a more positive state than ground, diodes D1 and/or D2 will conduct the pulse to ground. The L7591 SLIC Protector is available in an 8-pin, plastic DIP (L7591AB) and in an 8-pin, plastic SONB package (L7591AS).

Absolute Maximum Ratings (At 25 °C)

Stresses in excess of the Absolute Maximum Ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to Absolute Maximum Ratings for extended periods can adversely affect the device reliability.

Electrical Specifications (T_A = 25 °C)

The minimum and/or maximum limits specified for the parameters are based on the absolute system. The algebraic sign only applies to the direction of the parameter. These requirements apply to either the TIP or RING terminal; however, the device is capable of simultaneous Tip and Ring surges and continuous current, as noted below in Tip and Ring leads. See Figure 3 and Table 5 for symbol and test condition definition.
