

MAXIM

+5V, +10V Precision Voltage References

REF01/REF02

General Description

The REF01/REF02 are industry-standard precision voltage references. The stable 10V output of the REF01 can be adjusted over a $\pm 6\%$ range with minimal effect on temperature stability. The 5V output REF02 can also be adjusted over a $\pm 6\%$ range. The 10V REF01 has a single-supply operation over an input voltage range of 13V to 33V, while the 5V REF02 has a single-supply operation over an input voltage range of 7V to 33V. Both devices offer a low-current drain of 1mA. The REF02 also provides a TEMP pin whose output voltage varies linearly with temperature, making this device suitable for a wide variety of temperature-sensing and control applications. For new designs, refer to the MAX6035 or MAX6143 data sheets.

Features

- ◆ Pretrimmed to +5V, +10V
- ◆ Excellent Temperature Stability: 3ppm/°C (typ)
- ◆ Low Noise: 10 μ Vp-p (REF02)
- ◆ Short-Circuit Protected
- ◆ Linear Temperature Transducer Output (REF02)

ELECTRICAL CHARACTERISTICS—REF01C

($V_{IN} = +15V$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	REF01C			UNITS
			MIN	TYP	MAX	
Output Voltage Change with Temperature	ΔV_{OT}	(Note 3)		0.14	0.45	%
Output Voltage Temperature Coefficient	TCV_O	(Note 4)		20	65	ppm/ $^\circ C$
Change in V_O Temperature Coefficient with Output Adjustment		$R_P = 10k\Omega$		0.7		ppm/%
Line Regulation		$V_{IN} = 13V$ to 30V (Note 2)		0.011	0.018	%/V
Load Regulation		$I_L = 0$ to 5mA (Note 2)		0.008	0.018	%/mA

Note 1: Guaranteed by design.

Note 2: Line and load regulation specifications include the effect of self heating. 100% production tested at $T_A = +25^\circ C$ and guaranteed by design for $T_A = T_{MIN}$ to T_{MAX} , as specified.

Note 3: ΔV_{OT} is defined as the absolute difference between the maximum output voltage and the minimum output voltage over the specified temperature range expressed as a percentage of 10V. Guaranteed by design.

$$\Delta V_{OT} = \left[\frac{V_{MAX} - V_{MIN}}{10V} \right] \times 100$$

Note 4: TCV_O is defined as ΔV_{OT} divided by the temperature range. Guaranteed by design.

Output Adjustment

The REF01 trim terminal can be used to adjust the voltage over a 10V $\pm 600mV$ range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 10V, including 10.240V for

binary applications (see the *Typical Operating Circuit*).

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately 0.7ppm/ $^\circ C$ for 100mV of output adjustment.

ELECTRICAL CHARACTERISTICS—REF02 (continued)

($V_{IN} = +15V$, $T_A = T_{MIN}$ to T_{MAX} , $I_L = 0mA$, unless otherwise noted.)

Note 5: Guaranteed by design.

Note 6: Line and load regulation specifications include the effect of self heating. 100% production tested at $T_A = +25^\circ C$ and guaranteed by design for $T_A = T_{MIN}$ to T_{MAX} , as specified.

Note 7: Limit current in or out of pin 3 to 50nA and capacitance on pin 3 to 30pF.

Note 8: ΔV_{OT} is defined as the absolute difference between the maximum output voltage and the minimum output voltage over the specified temperature range expressed as a percentage of 5V. Guaranteed by design.

$$\Delta V_{OT} = \left[\frac{V_{MAX} - V_{MIN}}{5V} \right] \times 100$$

Note 9: TCV_O is defined as ΔV_{OT} divided by the temperature range. Guaranteed by design.

Output Adjustment

The REF02 trim terminal can be used to adjust the output voltage over a $5V \pm 300mV$ range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 5V (refer to the *Typical Operating Circuit*).

Adjustment of the output does not significantly affect the temperature performance of the device. Typically, the temperature coefficient change is 0.7ppm/ $^\circ C$ for 100mV of output adjustment.

Temperature Voltage Output

The REF02 provides a temperature-dependent output voltage on the TEMP pin. This voltage is proportional to the absolute temperature, and has a scale factor of approximately 2.1mV/ $^\circ C$ (Figure 1).

$$\text{Output Voltage} = 2.1(T + 273)mV$$

where T = Temperature in $^\circ C$.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
