<PCB LAYOUT GUIDELINE>

To achieve the isolation specified in the datasheet, it is needed that the ground plane as shown above figure.

PRECAUTIONS

- [1] The DC current at RF ports must be equal to zero, which can be achieved with DC blocking capacitors (C1, C2, and C3). (However, in case there is no possibility that DC current flows, the DC blocking capacitors are unnecessary, i.e. the RF signals are fed by SAW filters that block DC current by nature, etc.)
- [2] To reduce stripline influence on RF characteristics, please locate the bypass capacitor C4, C5, and C6 close to VDD and VCTL terminal.
- [3] For good isolation, the GND terminals must be connected to the PCB ground plane of substrate, and the through-holes connecting the backside ground plane should be placed near by the pin connection.
