

DESCRIPTION

The MP8001/MP8001A are IEEE 802.3 af POE compliant Powered Device (PD) controllers. they include detection and classification modes as well as a 100V output pass device having a temperature compensated current limit over the specified temperature range. Thermal protection is built in to accommodate both transient and/or overload conditions, shutting the part down and protecting the input source as well as the output load depending on the particular fault conditions. Inrush current limiting is included to slowly charge the input capacitor without interruption due to die heating, a problem encountered without the current limit foldback feature.

FEATURES

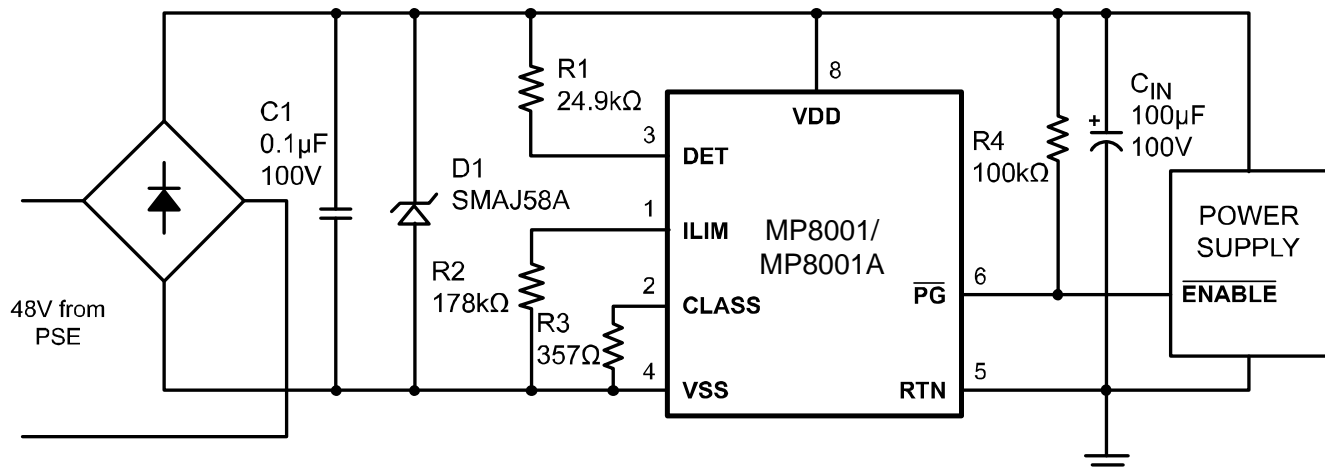

- Meets IEEE 802.3 af Specifications
- 100V, 1Ω Integrate DMOS Device
- 420mA Current Limit for MP8001
810mA Current Limit for MP8001A
- Open Drain Power Good Output
- SOIC-8 Package

APPLICATIONS

- VoIP Telephones
- Network Cards
- Security Camera Systems
- Safety Backup Power
- Remote Internet Power

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

TYPICAL APPLICATION

ORDERING INFORMATION

Part Number	Package	Top Marking	Free Air Temperature (T _A)
MP8001DS*	SOIC-8	MP8001DS	-40°C to +85°C
MP8001ADS**	SOIC-8	MP8001A	-40°C to +85°C

* For Tape & Reel, add suffix -Z (e.g. MP8001DS-Z).
 For RoHS compliant packaging, add suffix -LF (e.g. MP8001DS-LF-Z)

** For Tape & Reel, add suffix -Z (e.g. MP8001ADS-Z).
 For RoHS compliant packaging, add suffix -LF (e.g. MP8001ADS-LF-Z)

PACKAGE REFERENCE

ABSOLUTE MAXIMUM RATINGS ⁽¹⁾

V _{DD} , RTN	-0.3V to +100V
PG, DET	-0.3V to +57V
I _{LIM}	-0.3V to +7V
CLASS	-0.3V to +12V
Continuous Power Dissipation(T _A = +25°C) ⁽²⁾	1.19W
Junction Temperature	150°C
Lead Temperature	260°C
Storage Temperature	-65°C to +150°C

Recommended Operating Conditions ⁽³⁾

Supply Voltage V _{IN}	0V to 57V
Output Current I _{OUT}	0 to 0.4A
Operating Temperature	-40°C to +85°C
Junction Temperature	-40°C to +125°C

Thermal Resistance ⁽⁴⁾

	θ_{JA}	θ_{JC}
SOIC-8	105	50

Notes:

- Exceeding these ratings may damage the device.
- The maximum allowable power dissipation is a function of the maximum junction temperature T_J (MAX), the junction-to-ambient thermal resistance θ_{JA} , and the ambient temperature T_A. The maximum allowable continuous power dissipation at any ambient temperature is calculated by P_D (MAX) = (T_J (MAX)-T_A)/ θ_{JA} . Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- The device is not guaranteed to function outside of its operating conditions.
- Measured on JESD51-7, 4-layer PCB.

ELECTRICAL CHARACTERISTICS

$V_{DD} = 48V$, all voltages with respect to V_{SS} , $V_{SS} = 0V$; $R_{DET} = 26.1k\Omega$, $R_{CLASS} = 4.42k\Omega$, $R_{ILIM} = 178k\Omega$, $T_A = 25^\circ C$, unless otherwise noted.

Parameter	Symbol	Condition	Min	Typ	Max	Units	
Detection							
Detection on	V_{DET_ON}	$V_{DD}=V_{RTN}=V_{PG}=1.9V$		1.9		V	
Detection off	V_{DET_OFF}	$V_{DD}=V_{RTN}=V_{PG}=11V$		11		V	
Detection on/off Hysteresis	V_{DET_H}	Falling below 11V on Threshold		0.2		V

PIN FUNCTIONS

Pin #	Name	Description
1	ILIM	Startup I_{LIM} Value Set (optional at this point).
2	CLASS	Classification Resistor.
3	DET	26.1k Ω Detection Resistor.
4	VSS	Negative Power Supply Terminal.
5	RTN	Powered Device Negative Power Terminal.
6	PG	Power Good Indicator.
7	NC	No Connect. Possible post-package trim input.
8	VDD	Positive Power Supply Terminal.

OPERATION

The MP8001/MP8001A operate in the manner described here and in the IEEE 802.3af Powered Device (PD) Specifications. These devices (along with the power sourcing element (PSE)) operate as a safety device to supply potentially lethal voltages only when the power sourcing element recognizes a unique, tightly specified resistance at the end of an unknown length of Ethernet cable.

A 26.1k Ω resistance is presented as a load to the PSE in Detection Mode, when the PSE applies two “safe” voltages of less than 10.1V each while measuring the change in current drawn in order to determine the load resistance. If the PSE “sees” the correct load, then it may either further increase the applied voltage to enter the “classification” range of operation or switch on the nominal 48V power to the load.

The classification mode can further specify to the PSE the expected load range of the device under power so that the PSE can intelligently distribute power to as many loads as possible (within its maximum current capabilities). If a classification resistance is not present, the PD load is assumed to be the maximum of approximately 13 Watts. The classification mode is active between 14.5V and 20.5V.

The main power switch will pass a limited current above 31V, charging the external DC-to-DC converter’s input capacitor in a controlled manner. The charging will continue until the controlled current drops below the either an externally programmed limiting level or 420mA/810mA, depending upon the R_{lim} current setting resistor. The main power switch is internally thermally protected to 135°C by reducing the output current using a foldback technique. The required power dissipation of the IC drops from the allowed peak value of 24W (420mA x 57V) to 0.18W $((420mA)^2 \times R_{ON})$ during the normal operation at turn-on. The minimum allowed capacitance of 5 μ F will charge in 500 μ s. A larger capacitor will take a proportionally longer time to charge due to the constant current charging method. If a capacitor that is too large will overheat the part and force it into thermal shutdown. The IC will reattempt charging for a number of cycles but ultimately will be shut down until the input voltage from the PSE is recycled. This is the way the IC protects itself under overload and/or shorted conditions.

DETAIL "A"

NOTE:

- 1) CONTROL DIMENSION IS IN INCHES. DIMENSION IN BRACKET IS IN MILLIMETERS.
- 2) PACKAGE LENGTH DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
- 3) PACKAGE WIDTH DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
- 4) LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.004" INCHES MAX.
- 5) DRAWING CONFORMS TO JEDEC MS-012, VARIATION AA.
- 6) DRAWING IS NOT TO SCALE.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
