## Document Revision History

| Revision | Date      | Description  | Changed by |
|----------|-----------|--|------------|
| -        | 6/2/2017  | Initial Release                                      | ML         |
| 1        | 7/25/2017 | Update Storage Temperature range                     | ML         |
| 2        | 3/31/20   | Brightness Updated, Updated Interface Information    | SB         |
| 3        | 5/12/20   | Included Additional Dimensions on Mechanical Drawing | AS         |

## Functions and Features

- 128 x 64 pixel resolution
- Built-in SSD1322 controller
- Parallel or Serial MPU interface
- Single, low voltage power supply
- Power options via on-board jumpers
- RoHS compliant

| SYMBOL | REVISION | DATE |
|--------|----------|------|
|        |          |      |
|        |          |      |

- Notes:
1. Display Color: Yellow
  2. Interface: 8-bit 68XX/80XX Parallel, 3-/4-wire SPI
  3. Controller: SSD1322

# Interface Description

## Parallel Interface:

| Pin No. | Symbol                     | External Connection | Function Description   |
|---------|----------------------------|---------------------|--|
| 1       | V <sub>SS</sub>            | Power Supply        | Ground   |
| 2       | V <sub>DD</sub>            | Power Supply        | Supply Voltage for OLED module   |
| 3       | N.C. (BC_V <sub>DD</sub> ) | -                   | No Connect by default. Can be configured to provide independent supply voltage (2.8V – 12V DC) for boost converter. (refer to On-Board Jumper Options section below) |
| 4       | D/C                        | MPU                 | Data/Command select signal, D/C=0: Command; D/C=1: Data  |
| 5       | R/W or /WR                 | MPU                 | <b>6800-interface:</b><br>Read/Write select signal, R/W=1: Read, R/W=0: Write<br><b>8080-interface:</b><br>Active LOW Write signal                                   |
| 6       | E or /RD                   | MPU                 | <b>6800-interface:</b><br>Operation Enable signal Active High<br><b>8080-interface:</b><br>Active LOW Read signal  |
| 7-14    | DB0 – DB7                  | MPU                 | 8-bit bi-directional Data Bus  |
| 15      | N.C. (VCC)                 | -                   | No Connect by default. Can be configured for external VCC (+15V). (refer to On-Board Jumper Options table below)   |
| 16      | /RES                       | MPU                 | Active LOW Reset signal  |
| 17      | /CS                        | MPU                 | Active LOW Chip Select signal  |
| 18      | /SHDN (N.C.)               | MPU                 | Active LOW Shutdown control pin for boost converter (pulled HIGH via on-board 15kΩ resistor)<br>Can be made a No Connect by removing resistor R1.                    |
| 19      | BS1                        | MPU                 | MPU Interface select signal  |
| 20      | BS0                        | MPU                 | MPU Interface select signal  |

## Serial Interface:

| Pin No. | Symbol                     | External Connection | Function Description   |
|---------|----------------------------|---------------------|--|
| 1       | V <sub>SS</sub>            | Power Supply        | Ground   |
| 2       | V <sub>DD</sub>            | Power Supply        | Supply Voltage for OLED module   |
| 3       | N.C. (BC_V <sub>DD</sub> ) | -                   | No Connect by default. Can be configured to provide independent supply voltage (2.8V – 12V DC) for boost converter. (refer to On-Board Jumper Options table below) |
| 4       | D/C                        | MPU                 | Data/Command select signal, D/C=0: Command; D/C=1: Data (tie LOW for 3-wire Serial Interface)  |
| 5-6     | VSS                        | Power Supply        | Ground   |
| 7       | SCLK                       | MPU                 | Serial Clock signal  |
| 8       | SDIN                       | MPU                 | Serial Data Input signal   |
| 9       | N.C.                       | -                   | No Connect   |
| 10-14   | VSS                        | Power Supply        | Ground   |
| 15      | N.C. (VCC)                 | -                   | No Connect by default. Can be configured for external VCC (+15V). (refer to On-Board Jumper Options section below)   |
| 16      | /RES                       | MPU                 | Active LOW Reset signal  |
| 17      | /CS                        | MPU                 | Active LOW Chip Select signal  |
| 18      | /SHDN (N.C.)               | MPU                 | Active LOW Shutdown control pin for boost converter (pulled HIGH via on-board 15kΩ resistor)<br>Can be made a No Connect by removing resistor R1.                  |
| 19      | BS1                        | MPU                 | MPU Interface select signal  |
| 20      | BS0                        | MPU                 | MPU Interface select signal  |

# Interface Selection

## MPU Interface Pin Selections

| Pin Name | 6800 Parallel 8-bit interface | 8080 Parallel 8-bit interface | 3-wire Serial Interface | 4-wire Serial Interface |
|----------|-------------------------------|-------------------------------|-------------------------|-------------------------|
| BS1      | 1                             | 1                             | 0                       | 0                       |
| BS0      | 1                             | 0                             | 1                       | 0                       |

## MPU Interface Pin Assignment Summary

| Bus Interface | Data/Command Interface |    |    |    |    |      |      | Control Signals |     |     |         |      |      |  |
|---------------|------------------------|----|----|----|----|------|------|-----------------|-----|-----|---------|------|------|--|
|               | D7                     | D6 | D5 | D4 | D3 | D2   | D1   | D0              | E   | R/W | /CS     | D/C  | /RES |  |
| 8-bit 6800    | D[7:0]                 |    |    |    |    |      |      | E               | R/W | /CS | D/C     | /RES |      |  |
| 8-bit 8080    | D[7:0]                 |    |    |    |    |      |      | /RD             | /WR | /CS | D/C     | /RES |      |  |
| 3-wire SPI    | Tie LOW                |    |    | NC |    | SDIN | SCLK | Tie LOW         |     | /CS | Tie LOW | /RES |      |  |
| 4-wire SPI    | Tie LOW                |    |    | NC |    | SDIN | SCLK | Tie LOW         |     | /CS | D/C     | /RES |      |  |

# On-Board Jumper Options

## Default Jumper Setting

| R4    | R5   | R7   | Description  |
|-------|------|------|--|
| Close | Open | Open | <b>(default)</b> OLED controller and boost converter + OLED panel are powered from VDD (pin #2). This allows the full module to be powered by a single low-voltage supply. |

## Jumper Option #1 - Independent Supply Voltage for Boost Converter (BC\_VDD)

| R4   | R5    | R7   | Description   |
|------|-------|------|---|
| Open | Close | Open | Boost converter + OLED panel are powered from BC_VDD (pin #3). OLED controller is still powered from VDD (pin #2). This allows for increased efficiency through the boost converter, by allowing a supply voltage up to +12V at its input, BC_VDD (pin #3). |

## Jumper Option #2 – External Supply Voltage for OLED Panel (VCC)

| R4   | R5   | R7    | Description   |
|------|------|-------|---|
| Open | Open | Close | OLED panel is powered from VCC (pin #15) – boost converter is not used. OLED controller is still powered from VDD (pin #2). This allows for maximum module efficiency, and drastically reduced total current consumption. |

Default Jumper Setting

Jumper Option #1

Jumper Option #2

For detailed electrical information on each jumper option, please see the Electrical Characteristics table below.

## Electrical Characteristics

Values for Current shown below are based on the recommended initialization provided on page 12.

| Item                               | Symbol                | Condition                     | Min.                  | Typ.       | Max.                  | Unit      |
|------------------------------------|-----------------------|-------------------------------|-----------------------|------------|-----------------------|-----------|
| Operating Temperature Range        | T <sub>OP</sub>       | Absolute Max                  | -40                   | -          | +85                   | °C        |
| Storage Temperature Range          | T <sub>ST</sub>       | Absolute Max                  | -40                   | -          | +85                   | °C        |

| "H" Level output                   | V <sub>OH</sub>       | -                             | 0.9 * V <sub>DD</sub> | -          | V <sub>DD</sub>       | V         |
| "L" Level output                   | V <sub>OL</sub>       | -                             | V <sub>SS</sub>       | -          | 0.1 * V <sub>DD</sub> | V         |

**Note:** The electrical characteristics shown above for Jumper Option #1 and Jumper Option #2 apply only when the on-board jumpers are configured accordingly. By default, only Default Jumper Setting supply voltage and current (in bold) need to be considered. For details, see On-Board Jumper Options section on previous page.

## Optical Characteristics

Values for Brightness shown below are based on the recommended initialization provided on page 12.

| Item                   | Symbol         | Condition   | Min.      | Typ. | Max. | Unit              |
|------------------------|----------------|---|-----------|------|------|-------------------|
| Optimal Viewing Angles | Top            | φY+   | -         | 85   | -    | °                 |
|                        | Bottom         | φY-   | -         | 85   | -    | °                 |
|                        | Left           | θX-   | -         | 85   | -    | °                 |
|                        | Right          | θX+   | -         | 85   | -    | °                 |
| Contrast Ratio         | C <sub>r</sub> | -   | >10,000:1 | -    | -    | -                 |
| Response Time          | Rise           | T <sub>R</sub>  | -         | 15   | -    | ns                |
|                        | Fall           | T <sub>F</sub>  | -         | 15   | -    | ns                |
| Brightness             | L <sub>v</sub> | 50% Checkerboard  | 60        | 80   | -    | cd/m <sup>2</sup> |
| Lifetime               | -              | T <sub>OP</sub> =25°C, L <sub>v</sub> =100cd/m <sup>2</sup> | 60,000    | -    | -    | hrs               |
|                        | -              | T <sub>OP</sub> =25°C, L <sub>v</sub> =80cd/m <sup>2</sup>  | 100,000   | -    | -    | hrs               |

**Note:** Lifetime at typical temperature is based on accelerated high-temperature operation. Lifetime is tested at average 50% pixels on and is rated as Hours until **Half-Brightness**. To extend the life of the display, lower values may be used for the contrast setting registers – see below table of commands for details.

## Controller Information

Built-in SSD1322 controller.

For details, view full datasheet at [http://www.newhavendisplay.com/app\\_notes/SSD1322.pdf](http://www.newhavendisplay.com/app_notes/SSD1322.pdf)

## Table of Commands

# MPU Interface

## 6800-MPU Parallel Interface

The parallel interface consists of 8 bi-directional data pins, R/W, D/C, E, and /CS.

A LOW on R/W indicates write operation, and HIGH on R/W indicates read operation.

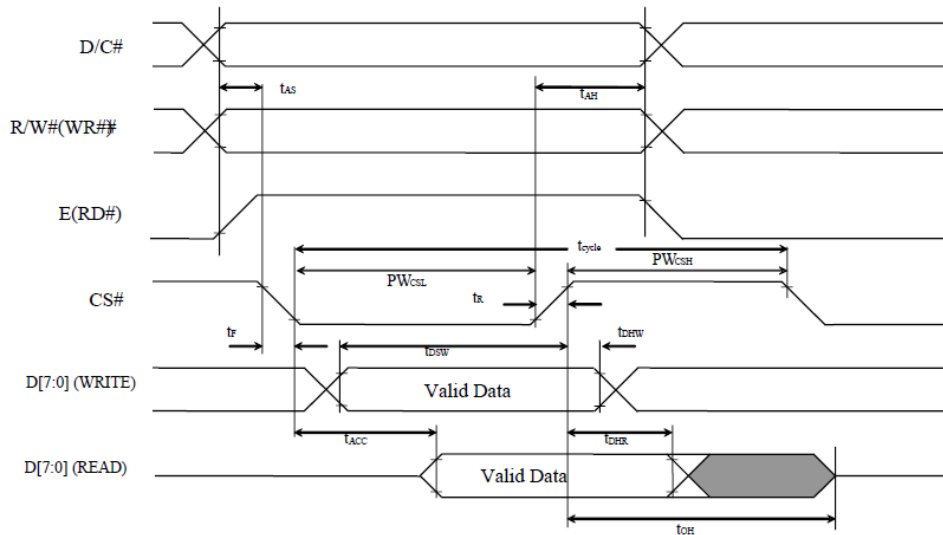

A LOW on D/C indicates “Command” read or write, and HIGH on D/C indicates “Data” read or write.

The E input serves as data latch signal, while /CS is LOW. Data is latched at the falling edge of E signal.

| Function      | E | R/W | /CS | D/C |
|---------------|---|-----|-----|-----|
| Write Command | ↓ | 0   | 0   | 0   |
| Read Status   | ↓ | 1   | 0   | 0   |
| Write Data    | ↓ | 0   | 0   | 1   |
| Read Data     | ↓ | 1   | 0   | 1   |

( $V_{DD} - V_{SS} = 2.4$  to  $2.6V$ ,  $V_{DDIO} = 1.6V$ ,  $V_{CI} = 3.3V$ ,  $T_A = 25^\circ C$ )

| Symbol      | Parameter                            | Min | Typ | Max | Unit |
|-------------|--------------------------------------|-----|-----|-----|------|
| $t_{cycle}$ | Clock Cycle Time                     | 300 | -   | -   | ns   |
| $t_{AS}$    | Address Setup Time                   | 10  | -   | -   | ns   |
| $t_{AH}$    | Address Hold Time                    | 0   | -   | -   | ns   |
| $t_{DSW}$   | Write Data Setup Time                | 40  | -   | -   | ns   |
| $t_{DHW}$   | Write Data Hold Time                 | 7   | -   | -   | ns   |
| $t_{DHR}$   | Read Data Hold Time                  | 20  | -   | -   | ns   |
| $t_{OH}$    | Output Disable Time                  | -   | -   | 70  | ns   |
| $t_{ACC}$   | Access Time                          | -   | -   | 140 | ns   |
| $PW_{CSL}$  | Chip Select Low Pulse Width (read)   | 120 | -   | -   | ns   |
|             | Chip Select Low Pulse Width (write)  | 60  | -   | -   | ns   |
| $PW_{CSH}$  | Chip Select High Pulse Width (read)  | 60  | -   | -   | ns   |
|             | Chip Select High Pulse Width (write) | 60  | -   | -   | ns   |
| $t_r$       | Rise Time                            | -   | -   | 15  | ns   |
| $t_f$       | Fall Time                            | -   | -   | 15  | ns   |

## 8080-MPU Parallel Interface

The parallel interface consists of 8 bi-directional data pins, /RD, /WR, D/C, and /CS.

A LOW on D/C indicates “Command” read or write, and HIGH on D/C indicates “Data” read or write.

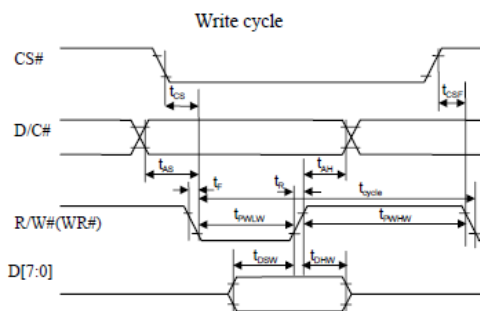

A rising edge of /RS input serves as a data read latch signal while /CS is LOW.

A rising edge of /WR input serves as a data/command write latch signal while /CS is LOW.

| Function      | /RD | /WR | /CS | D/C |
|---------------|-----|-----|-----|-----|
| Write Command | 1   | ↑   | 0   | 0   |
| Read Status   | ↑   | 1   | 0   | 0   |
| Write Data    | 1   | ↑   | 0   | 1   |
| Read Data     | ↑   | 1   | 0   | 1   |

( $V_{DD} - V_{SS} = 2.4$  to  $2.6V$ ,  $V_{DDIO} = 1.6V$ ,  $V_{CI} = 3.3V$ ,  $T_A = 25^\circ C$ )

| Symbol      | Parameter                            | Min | Typ | Max | Unit |
|-------------|--------------------------------------|-----|-----|-----|------|
| $t_{cycle}$ | Clock Cycle Time                     | 300 | -   | -   | ns   |
| $t_{AS}$    | Address Setup Time                   | 10  | -   | -   | ns   |
| $t_{AH}$    | Address Hold Time                    | 0   | -   | -   | ns   |
| $t_{DSW}$   | Write Data Setup Time                | 40  | -   | -   | ns   |
| $t_{DHW}$   | Write Data Hold Time                 | 7   | -   | -   | ns   |
| $t_{DHR}$   | Read Data Hold Time                  | 20  | -   | -   | ns   |
| $t_{OH}$    | Output Disable Time                  | -   | -   | 70  | ns   |
| $t_{ACC}$   | Access Time                          | -   | -   | 140 | ns   |
| $t_{PWLr}$  | Read Low Time                        | 150 | -   | -   | ns   |
| $t_{PWLw}$  | Write Low Time                       | 60  | -   | -   | ns   |
| $t_{PWHr}$  | Read High Time                       | 60  | -   | -   | ns   |
| $t_{PWHw}$  | Write High Time                      | 60  | -   | -   | ns   |
| $t_r$       | Rise Time                            | -   | -   | 15  | ns   |
| $t_f$       | Fall Time                            | -   | -   | 15  | ns   |
| $t_{CS}$    | Chip select setup time               | 0   | -   | -   | ns   |
| $t_{CSH}$   | Chip select hold time to read signal | 0   | -   | -   | ns   |
| $t_{CSF}$   | Chip select hold time                | 20  | -   | -   | ns   |

## Serial Interface (4-wire)

The 4-wire serial interface consists of Serial Clock (SCLK), Serial Data (SDIN), Data/Command (D/C), and Chip Select (/CS). D0 acts as SCLK and D1 acts as SDIN. D2 must be left as a No Connect D3~D7, E, and R/W should be connected to GND.

| Function      | /RD     | /WR     | /CS | D/C | D0 |
|---------------|---------|---------|-----|-----|----|
| Write Command | Tie LOW | Tie LOW | 0   | 0   | ↑  |
| Write Data    | Tie LOW | Tie LOW | 0   | 1   | ↑  |

( $V_{DD} - V_{SS} = 2.4$  to  $2.6V$ ,  $V_{DDIO} = 1.6V$ ,  $V_{CI} = 3.3V$ ,  $T_A = 25^\circ C$ )

| Symbol      | Parameter              | Min | Typ | Max | Unit |
|-------------|------------------------|-----|-----|-----|------|
| $t_{cycle}$ | Clock Cycle Time       | 100 | -   | -   | ns   |
| $t_{AS}$    | Address Setup Time     | 15  | -   | -   | ns   |
| $t_{AH}$    | Address Hold Time      | 15  | -   | -   | ns   |
| $t_{CSS}$   | Chip Select Setup Time | 20  | -   | -   | ns   |
| $t_{CSH}$   | Chip Select Hold Time  | 10  | -   | -   | ns   |
| $t_{DSW}$   | Write Data Setup Time  | 15  | -   | -   | ns   |
| $t_{DHW}$   | Write Data Hold Time   | 15  | -   | -   | ns   |
| $t_{CLKL}$  | Clock Low Time         | 20  | -   | -   | ns   |
| $t_{CLKH}$  | Clock High Time        | 20  | -   | -   | ns   |
| $t_R$       | Rise Time              | -   | -   | 15  | ns   |
| $t_F$       | Fall Time              | -   | -   | 15  | ns   |

SDIN is shifted into an 8-bit shift register on every rising edge of SCLK in the order of D7, D6,...D0.

D/C is sampled on every eighth clock and the data byte in the shift register is written to the GDDRAM or command register in the same clock.

Note: Read functionality is not available in serial mode.

### Serial Interface (3-wire)

The 3-wire serial interface consists of Serial Clock (SCLK), Serial Data In (SDIN), and Chip Select (/CS). D0 acts as SCLK and D1 acts as SDIN. D2 must be left as a No Connect. D3~D7, E, R/W, and D/C should be connected to Ground.

| Function      | /RD     | /WR     | /CS | D/C     | D0 |
|---------------|---------|---------|-----|---------|----|
| Write Command | Tie LOW | Tie LOW | 0   | Tie LOW | ↑  |
| Write Data    | Tie LOW | Tie LOW | 0   | Tie LOW | ↑  |

( $V_{DD} - V_{SS} = 2.4$  to  $2.6V$ ,  $V_{DDIO} = 1.6V$ ,  $V_{CI} = 3.3V$ ,  $T_A = 25^{\circ}C$ )

| Symbol      | Parameter              | Min | Typ | Max | Unit |
|-------------|------------------------|-----|-----|-----|------|
| $t_{cycle}$ | Clock Cycle Time       | 100 | -   | -   | ns   |
| $t_{css}$   | Chip Select Setup Time | 20  | -   | -   | ns   |
| $t_{csh}$   | Chip Select Hold Time  | 10  | -   | -   | ns   |
| $t_{dsw}$   | Write Data Setup Time  | 15  | -   | -   | ns   |
| $t_{dhw}$   | Write Data Hold Time   | 15  | -   | -   | ns   |
| $t_{clkl}$  | Clock Low Time         | 20  | -   | -   | ns   |
| $t_{clkh}$  | Clock High Time        | 20  | -   | -   | ns   |
| $t_r$       | Rise Time              | -   | -   | 15  | ns   |
| $t_f$       | Fall Time              | -   | -   | 15  | ns   |

SDIN is shifted into an 9-bit shift register on every rising edge of SCLK in the order of D/C, D7, D6,...D0. D/C (first bit of the sequential data) will determine if the following data byte is written to the Display Data RAM (D/C = 1) or the command register (D/C = 0).

Note: Read functionality is not available in serial mode.

For detailed timing information for each interface mode, view full SSD1322 datasheet here (pages 50-54):

## Recommended Initialization

```
void NHD12864WDY3_Init(void){
    digitalWrite(RESET, LOW);           //pull /RES (pin #16) low
    delayUS(200);                       //keep /RES low for minimum 200µs
    digitalWrite(RESET, HIGH);         //pull /RES high
    delayUS(200);                       //wait minimum 200µs before sending commands
    writeCommand(0xAE);                 //display OFF
    writeCommand(0xB3);                 //set CLK div. & OSC freq.
    writeData(0x91);
    writeCommand(0xCA);                 //set MUX ratio
    writeData(0x3F);
    writeCommand(0xA2);                 //set offset
    writeData(0x00);
    writeCommand(0xAB);                 //function selection
    writeData(0x01);
    writeCommand(0xA0);                 //set re-map
    writeData(0x16);
    writeData(0x11);
    writeCommand(0xC7);                 //master contrast current
    writeData(0x0F);
    writeCommand(0xC1);                 //set contrast current
    writeData(0x9F);
    writeCommand(0xB1);                 //set phase length
    writeData(0xF2);
    writeCommand(0xBB);                 //set pre-charge voltage
    writeData(0x1F);
    writeCommand(0xB4);                 //set VSL
    writeData(0xA0);
    writeData(0xFD);
    writeCommand(0xBE);                 //set VCOMH
    writeData(0x04);
    writeCommand(0xA6);                 //set display mode
    writeCommand(0xAF);                 //display ON
}
```

## Example Software Routines

```
void setColumn(unsigned char xStart, unsigned char xEnd){
    writeCommand(0x15);    //set column (x-axis) start/end address
    writeData(xStart);     //column start; 28 is left-most column
    writeData(xEnd);      //column end; 91 is right-most column
}

void setRow(unsigned char yStart, unsigned char yEnd){
    writeCommand(0x75);   //set row (y-axis) start/end address
    writeData(yStart);    //row start; 0 is top row
    writeData(yEnd);     //row end; 63 is bottom row
}

void clearDisplay(void){
    unsigned int i;
    setColumn(28,91);    //set column (x-axis) start/end address
    setRow(0,63);       //set row (y-axis) start/end address
    writeRAM();         //single byte command (0x5C) to initiate pixel data write to GDDRAM;
    for(i=0;i<4096;i++){ // ((91-28)+1)*((63-0)+1)
        writeData(0x00);
        writeData(0x00);
    }
}

void write2Pixels(unsigned char xPos, unsigned char yPos, unsigned char pixel1, unsigned char pixel2){
    if(pixel1>=1) pixel1 = 0xFF;    //set 1st pixel value to ON
    else pixel1 = 0x00;            //set 1st pixel value to OFF
    if(pixel2>=1) pixel2 = 0xFF;    //set 2nd pixel value to ON
    else pixel2 = 0x00;            //set 2nd pixel value to OFF
    if(xPos>127) xPos = 127;       //boundary check (MIN xPos = 0, MAX xPos = 127)
    xPos = xPos/2;                //account for GDDRAM address mapping
    xPos+=28;                     //account for GDDRAM address mapping
    if(yPos>63) yPos = 63;        //boundary check (MIN yPos = 0, MAX yPos = 63)
    setColumn(xPos,xPos);         //set column (x-axis) start/end address
    setRow(yPos,yPos);           //set row (y-axis) start/end address
    writeRAM();                  //single byte command (0x5C) to initiate pixel data write to GDDRAM;
    writeData(pixel1);           //write 1st of 2 pixels to the display
    writeData(pixel2);           //write 2nd of 2 pixels to the display
}

void displayArray12864(const unsigned char arr[]){ //display 128x64 monochrome bitmap, horizontal pixel arrangement, 8-pixels per byte
    unsigned int i, j;
    setColumn(28,91);           //set column (x-axis) start/end address
    setRow(0,63);               //set row (y-axis) start/end address
    writeRAM();                 //single byte command (0x5C) to initiate pixel data write to GDDRAM;
    for(i=0;i<1024;i++){       //translate each byte/bit into pixel data
        for(j=0;j<8;j++){
            if(((arr[i]<<j)&0x80)==0x80){
                writeData(0xFF);
            }
            else{
                writeData(0x00);
            }
        }
    }
}
```

## Quality Information

| Test Item                             | Content of Test  | Test Condition  | Note |
|---------------------------------------|--|---|------|
| High Temperature storage              | Test the endurance of the display at high storage temperature.   | +85°C, 240hrs   | 2    |
| Low Temperature storage               | Test the endurance of the display at low storage temperature.  | -40°C, 240hrs   | 1,2  |
| High Temperature Operation            | Test the endurance of the display by applying electric stress (voltage & current) at high temperature.                         | +85°C, 240hrs   | 2    |
| Low Temperature Operation             | Test the endurance of the display by applying electric stress (voltage & current) at low temperature.                          | -40°C, 240hrs   | 1,2  |
| High Temperature / Humidity Operation | Test the endurance of the display by applying electric stress (voltage & current) at high temperature with high humidity.      | +60°C, 90% RH, 240hrs   | 1,2  |
| Thermal Shock resistance              | Test the endurance of the display by applying electric stress (voltage & current) during a cycle of low and high temperatures. | -40°C, 30min -> +25°C, 5min -> +85°C, 30min = 1 cycle<br>100 cycles               |      |
| Vibration test                        | Test the endurance of the display by applying vibration to simulate transportation and use.                                    | 10-22Hz, 15mm amplitude.<br>22-500Hz, 1.5G<br>30min in each of 3 directions X,Y,Z | 3    |
| Atmospheric Pressure test             | Test the endurance of the display by applying atmospheric pressure to simulate transportation by air.                          | 115mbar, 40hrs  | 3    |
| Static electricity test               | Test the endurance of the display by applying electric static discharge.   | VS=800V, RS=1.5kΩ, CS=100pF<br>One time   |      |

**Note 1:** No condensation to be observed.

**Note 2:** Conducted after 2 hours of storage at 25°C, 0%RH.

**Note 3:** Test performed on product itself, not inside a container.

### Evaluation Criteria:

- 1: Display is fully functional during operational tests and after all tests, at room temperature.
- 2: No observable defects.
- 3: Luminance >50% of initial value.
- 4: Current consumption within 50% of initial value

## Precautions for using OLEDs/LCDs/LCMs

See Precautions at [www.newhavendisplay.com/specs/precautions.pdf](http://www.newhavendisplay.com/specs/precautions.pdf)

## Warranty Information

See Terms & Conditions at [http://www.newhavendisplay.com/index.php?main\\_page=terms](http://www.newhavendisplay.com/index.php?main_page=terms)

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
