

QUICK START GUIDE FOR DEMONSTRATION CIRCUIT 1429A

HIGH EFFICIENCY, HIGH VOLTAGE 50mA SYNCHRONOUS STEP-DOWN CONVERTER

LTC3642

DESCRIPTION

Demonstration circuit DC1429A is a high efficiency step-down DC/DC converter featuring LTC3642 with internal high side and synchronous power switches that draws only 10 μ A quiescent current. It has a wide 4.5V to 45V input range and internal over voltage monitor capable of protecting the part through 60V surges. The jumper selectable output

is up to 5V. LTC3642 can supply up to 50mA load current with a programmable peak current limit that provides a simple method for optimizing efficiency in lower current applications. With no compensation required, LTC3642 is easily configured with minimal components. **Gerber files for this circuit are available. Call the LTC Factory.**

Table 1. Performance Summary ($T_A = 25^\circ\text{C}$)

PARAMETER	CONDITION	VALUE
Input Voltage		4.5V to 45V
Output Voltage V_{OUT}	$I_{OUT}=1\text{mA to }50\text{mA}$, $V_{IN}=10\text{V}$	$V_{OUT} \pm 2.7\%$ (LTC3642 Output adjustable version) $V_{OUT} \pm 1.3\%$ (LTC3642-3.3 Fixed 3.3V version) $V_{OUT} \pm 1.3\%$ (LTC3642-5 Fixed 5.0V version)
Maximum Output Current		50mA
DC Supply Current	Active Mode, $V_{IN}=10\text{V}$, $I_O=0\text{A}$	110 μ A
Nominal Switching Frequency	Inductance=100 μ H, $V_{IN}=30\text{V}$	350kHz

QUICK START PROCEDURE

The DC1429A is easy to set up to evaluate the performance of the LTC3642. For a proper measurement equipment configuration, set up the circuit according to the diagram in Figure 2.

NOTE: When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the V_{IN} or V_{OUT} and GND terminals. See the Measurement Equipment Set-up diagram in Figure 1 for proper scope probe technique. To reduce the output voltage ripple further additional capacitor of 100 μ F can be added in parallel.

Please follow the procedure outlined below for proper operation.

1. Connect the input power supply to the V_{IN} and GND terminals. Connect the load between the V_{OUT} and GND terminals. Refer to Figure 2 for the proper measurement equipment setup.
2. Before proceeding to operation, insert jumper shunt XJP1 into the OFF position and insert jumper shunt into XJP2, XJP3 or XJP4 for voltages of 1.8V, 3.3V or 5V respectively. Set the load output current to 20 mA.
3. Apply 6V at V_{IN} . Measure V_{OUT} ; it should read 0V. If desired, one can measure the shut-down supply current at this point. The supply current will be about 3 μ A in shutdown.
4. Turn on V_{OUT} by changing shunt XJP1 from the OFF position to the ON position. The out-

HIGH EFFICIENCY, HIGH VOLTAGE 50MA SYNCHRONOUS STEP-DOWN CONVERTER

put voltage should measure according to the voltage set by the shunt jumper in XJP2, XJP3 or XJP4.

6. Vary the V_{OUT} load current from 1mA to 50mA, and the output voltage should be within a tolerance of $\pm 2.7\%$.

5. Vary the input voltage from 6V to 45V.

Warning - If the power for the demo board is carried in long leads, the input voltage at the part could “ring”, which could affect the operation of the circuit or even exceed the maximum voltage rating of the IC. To eliminate the ringing, insert an electrolytic capacitor (for instance, Panasonic part # EEU-FC2A680L, 68 μ F/100V) on the pads between the input power and return terminals on the bottom of the demo board. The (greater) ESR of the electrolytic will dampen the (possible) ringing voltage due to the use of long input leads. On a normal, typical PCB, with short traces, the capacitor is not needed.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
