Descriptions

The DIO207x is a single/dual/quad/six channel, rail-to-rail I/O operational amplifier which allows low load impedances to be driven. With a 10MHz unity-gain frequency and low noise, low distortion and high output current capability, the DIO207x provides excellent choice for high quality systems. The input common-mode voltage range includes ground, and the maximum input offset voltage is $\pm 3\text{mV}$ (guaranteed). They are also capable of comfortably driving large capacitive loads.

DIO207x is offered in Green or RoHS package and ESD (HBM) excesses 4kV. It is specified over the extended -40 to +125°C.
