

### PRODUCT OVERVIEW

The D2U5T-H3-7000-54-HU4C is a High Efficiency 3500/7000 watt, power factor corrected, three phase power converter for 230/480VAC lines with a 54VDC main output and a 5V or 3.3V (20W) selectable standby output. The unit is provided with droop sharing and up to three supplies may be operated in parallel.

The supply is hot pluggable. It recovers from over temperature faults, and has status LEDs on the front panel in addition to logic and PMBus status signals.

The 2U package and 23.1W/cubic inch power density make them ideal for delivering reliable, efficient power to servers, workstations, storage systems, broadcast transmitters and many other applications.

4 The Input OK LED blinks to indicate that there is still energy inside the power supply until the input bulk capacitors are completely discharged or the housekeeping circuit is shut down.

5 The Fault LED and PS Fault signal shall be turned on to indicate that there is one or more of the following internal faults currently detected inside the power supply:

- VSB out of range
- Output stage OT
- Fan fault
- ORING fault (Output voltage less than bus voltage)
- OC shutdown
- OT shutdown
- OV shutdown
- Input stage OT
- Fault induced shutdown occurred
- Thermal sensor fault
- Vout out of range
- PFC Boost Vbulk fault

As soon as all of the above faults are removed and the power supply operates normally, the Fault LED and PS Fault signal shall be turned off.

LED Definition: Three LEDs shall be located on the front faceplate, and these are:
