## +5V, RS-232 Transceivers with 0.1μF External Capacitors

### General Description

The MAX200–MAX209/MAX211/MAX213 transceivers are designed for RS-232 and V.28 communication interfaces where  $\pm 12\text{V}$  supplies are not available. On-board charge pumps convert the +5V input to the  $\pm 10\text{V}$  needed for RS-232 output levels. The MAX201 and MAX209 operate from +5V and +12V, respectively, and contain a +12V to -12V charge-pump voltage converter.

The MAX200–MAX209/MAX211/MAX213 drivers and receivers meet all EIA/TIA-232E and CCITT V.28 specifications at a 20kbps data rate. The drivers maintain the  $\pm 5\text{V}$  EIA/TIA-232E output signal levels at data rates in excess of 120kbps when loaded in accordance with the EIA/TIA-232E specification.

The 5μW shutdown mode of the MAX200, MAX205, MAX206, and MAX211 conserves energy in battery-powered systems. The MAX213 has an active-low shutdown and an active-high receiver enable control. Two receivers of the MAX213 are active, allowing the ring indicator (RI) to be monitored easily using only 75μW power.

The MAX211 and MAX213 are available in a 28-pin, wide small-outline (SO) package and a 28-pin shrink small-outline (SSOP) package, which occupies only 40% of the area of the SO. The MAX207 is now available in a 24-pin SO package and a 24-pin SSOP. The MAX203 and MAX205 use no external components and are recommended for applications with limited circuit board space.

**Ordering Information appears at end of data sheet.**

### Next-Generation Device Features

- ◆ **For Low-Cost Applications:**  
MAX221E:  $\pm 15\text{kV}$  ESD-Protected, +5V, 1μA, Single RS-232 Transceiver with AutoShutdown™
- ◆ **For Low-Voltage and Space-Constrained Applications:**  
MAX3222E/MAX3232E/MAX3237E/MAX3241E/  
MAX3246E:  $\pm 15\text{kV}$  ESD-Protected, Down to 10nA, +3.0V to +5.5V, Up to 1Mbps, True RS-232 Transceivers (MAX3246E Available in UCSP™ Package)
- ◆ **For Space-Constrained Applications:**  
MAX3228E/MAX3229E:  $\pm 15\text{kV}$  ESD-Protected, +2.5V to +5.5V, RS-232 Transceivers in UCSP
- ◆ **For Low-Voltage or Data Cable Applications:**  
MAX3380E/MAX3381E: +2.35V to +5.5V, 1μA, 2Tx/2Rx RS-232 Transceivers with  $\pm 15\text{kV}$  ESD-Protected I/O and Logic Pins
- ◆ **For Low-Power Applications:**  
MAX3224E–MAX3227E/MAX3244E/MAX3245E:  $\pm 15\text{kV}$  ESD-Protected, 1μA, 1Mbps, +3.0V to +5.5V, RS-232 Transceivers with AutoShutdown Plus™

### Applications

Computers: Laptops, Palmtops, Notebooks  
Battery-Powered Equipment  
Handheld Equipment

with 0.1μF External Capacitors**

When in low-power shutdown mode, the driver outputs are turned off and their leakage current is less than 1mA, even if the transmitter output is backdriven between 0V and (VCC + 6V). Below -0.5V, the transmitter output is diode clamped to ground with a 1k $\Omega$  series impedance. The transmitter output is also zener clamped to approximately (VCC + 6V), with a 1k $\Omega$  series impedance.

## +5V, RS-232 Transceivers with 0.1μF External Capacitors

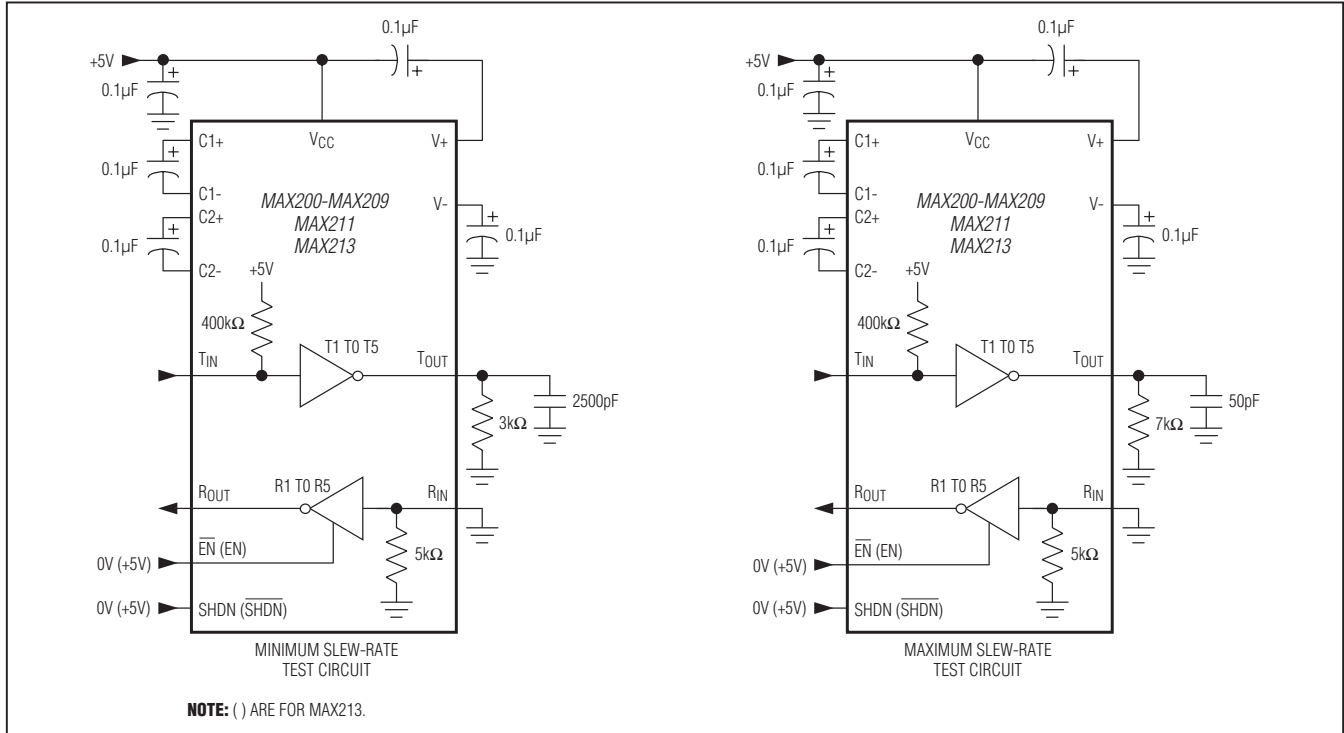

Figure 3. Transition Slew-Rate Test Circuit

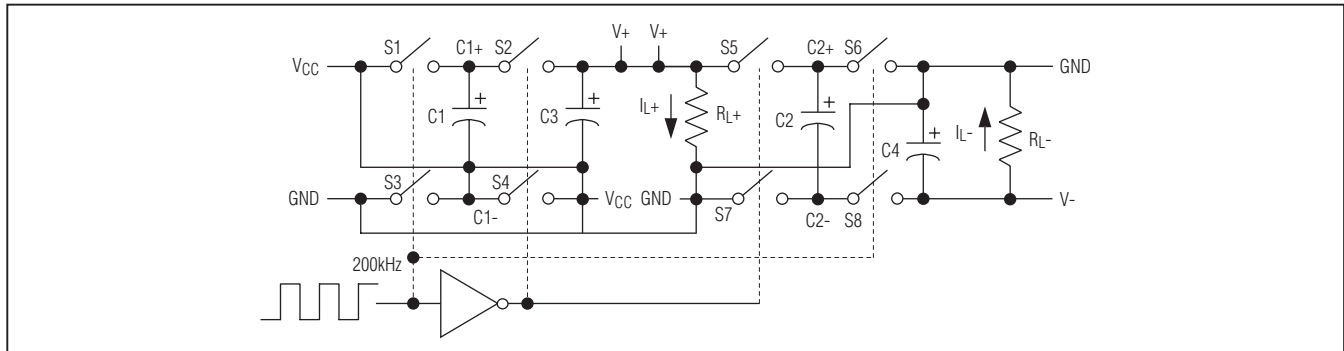

Figure 4. Dual Charge-Pump Diagram

### RS-232 Receivers

The receivers convert RS-232 signals to CMOS logic output levels. Receiver outputs are inverting, maintaining compatibility with driver outputs. The guaranteed receiver input thresholds of +0.8V and +2.4V are significantly tighter than the  $\pm 3.0V$  threshold required by the EIA/TIA-232E specification. This allows receiver inputs to respond to TTL/CMOS logic levels and improves noise margin for RS-232 levels.

The MAX200–MAX209/MAX211/MAX213 guaranteed +0.8V threshold (+0.6V in shutdown for the MAX213) ensures that receivers shorted to ground have a logic 1 output. Also, the 5kΩ input resistance to ground ensures that a receiver with its input left open also has a logic 1 output.

Receiver inputs have approximately +0.5V hysteresis. This provides clean output transitions, even with slow rise and fall time input signals with moderate amounts of noise and ringing. In shutdown, the MAX213 receivers R4 and R5 have no hysteresis.

# MAX200–MAX209/MAX211/MAX213

## +5V, RS-232 Transceivers with 0.1μF External Capacitors

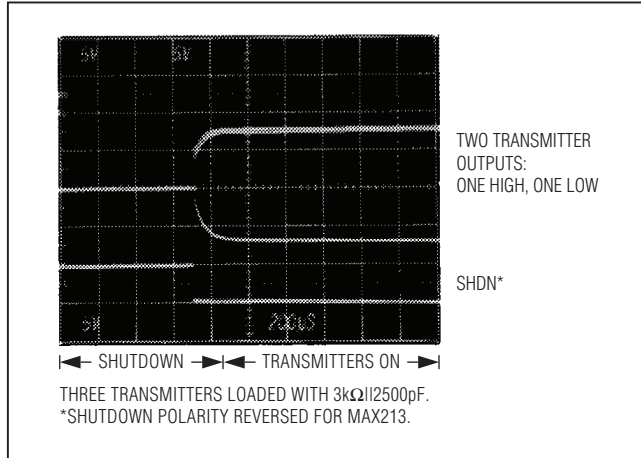

Figure 5. Transmitter Outputs When Exiting Shutdown

### Shutdown and Enable Control

In shutdown mode, the MAX200/MAX205/MAX206/MAX211/MAX213 charge pumps are turned off, V+ is pulled down to VCC, V- is pulled to ground, and the transmitter outputs are disabled. This reduces supply

current typically to 1μA (15μA for the MAX213). The time required to exit shutdown is 1ms, as shown in Figure 5.

All receivers except R4 and R5 on the MAX213 are put into a high-impedance state in shutdown mode. The MAX213's R4 and R5 receivers still function in shutdown mode. These two receivers are useful for monitoring external activity while maintaining minimal power consumption.

The enable control is used to put the receiver outputs into a high-impedance state, so that the receivers can be connected directly to a three-state bus. It has no effect on the RS-232 drivers or on the charge pumps.

### MAX213 Receiver Operation in Shutdown

During normal operation, the MAX213's receiver propagation delay is typically 1μs. When entering shutdown with receivers active, R4 and R5 are not valid until 80μs after SHDN is driven low. In shutdown mode, propagation delays increase to 4μs for a high-to-low or a low-to-high transition.

When exiting shutdown, all receiver outputs are invalid until the charge pumps reach nominal values (< 2ms when using 0.1μF capacitors).

Table 1a. MAX200 Control Pin Configurations

SHDN	OPERATION STATUS	TRANSMITTERS T1–T5
0	Normal Operation	All Active
1	Shutdown	All High-Z

Table 1b. MAX205/MAX206/MAX211 Control Pin Configurations

SHDN	EN	OPERATION STATUS	TRANSMITTERS T1–T5	RECEIVERS R1–R5
0	0	Normal Operation	All Active	All Active
0	1	Normal Operation	All Active	All High-Z
1	0	Shutdown	All High-Z	All High-Z

Table 1c. MAX213 Control Pin Configurations

SHDN	EN	OPERATION STATUS	TRANSMITTERS T1–T4	RECEIVERS	
				R1, R2, R3	R4, R5
0	0	Shutdown	All High-Z	High-Z	High-Z
0	1	Shutdown	All High-Z	High-Z	Active*
1	0	Normal Operation	All Active	High-Z	High-Z
1	1	Normal Operation	All Active	Active	Active

\*Active = active with reduced performance.

## +5V, RS-232 Transceivers with 0.1 $\mu$ F External Capacitors

### Applications Information

#### Capacitor Selection

The type of capacitor used is not critical for proper operation. Ceramic capacitors are suggested. To ensure proper RS-232 signal levels over temperature when using 0.1 $\mu$ F capacitors, make sure the capacitance value does not degrade excessively as the temperature varies. If in doubt, use capacitors with a larger nominal value. Also observe the capacitors' ESR value over temperature, since it influences the amount of ripple on V+ and V-. To reduce the output impedance at V+ and V-, use larger capacitors (up to 10 $\mu$ F). If polarized capacitors are used, obey the polarities shown in Figure 1 and the pin configurations.

#### Driving Multiple Receivers

Each transmitter is designed to drive a single receiver. Transmitters can be paralleled to drive multiple receivers.

#### Driver Outputs When Exiting Shutdown

Figure 5 shows two driver outputs exiting shutdown. As they become active, the two driver outputs go to opposite RS-232 levels (one driver input is high, the other is low). Each driver is loaded with 3k $\Omega$  in parallel with 2500pF. The driver outputs display no ringing or undesirable transients as they come out of shutdown.

#### Power-Supply Decoupling

In applications that are sensitive to power-supply noise, decouple VCC to ground with a capacitor of the same value as the charge-pump capacitors.

#### V+ and V- as Power Supplies

A small amount of power can be drawn from V+ and V-, although this reduces noise margins.

#### Power Supplies for MAX201/MAX209

If at power-up the V+ supply rises after the VCC supply, place a diode (e.g., 1N914) in series with the V+ supply.

**Table 2. Summary of EIA/TIA-232E, V.28 Specifications**

PARAMETER	CONDITION	EIA/TIA-232E, V.28 SPECIFICATION
Driver Output Voltage: 0 Level	3k $\Omega$ to 7k $\Omega$ load	+5.0V to +15V
Driver Output Voltage: 1 Level	3k $\Omega$ to 7k $\Omega$ load	-5.0V to -15V
Output Level, Maximum	No load	$\pm$ 25V
Data Rate	3k $\Omega \leq R_L \leq 7k\Omega$ , $C_L \leq 2500pF$	Up to 20kbps
Receiver Input Voltage: 0 Level	—	+3.0V to +15V
Receiver Input Voltage: 1 Level	—	-3.0V to -15V
Input Level, Maximum	—	$\pm$ 25V
Instantaneous Slew Rate, Maximum	3k $\Omega \leq R_L \leq 7k\Omega$ , $C_L \leq 2500pF$	30V/ $\mu$ s
Driver Output Short-Circuit Current, Maximum	—	100mA
Transition Rate on Driver Output	V.28	1ms or 3% of the period
	EIA/TIA-232E	4% of the period
Driver Output Resistance	-2V < VOUT < +2V	300 $\Omega$

## +5V, RS-232 Transceivers with 0.1µF External Capacitors

### Package Information

For the latest package outline information and land patterns, go to [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages). Note that a “+”, “#”, or “-” in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

### Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
6	10/03	Changed the <i>Features</i> section and section information to the <i>Next-Generation Device Features</i> section.	1
7	12/05	Added Note 1 to the <i>Absolute Maximum Ratings</i> section.	2

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
