

2- CHANNEL HIGH DEFINITION AUDIO CODEC

STAC9200

Description

The STAC9200 is a high quality, 2-channel audio CODEC compatible with the Intel High Definition (HD) Audio Interface. The STAC9200 provides Stereo 24-Bit resolution with sample rates up to 192 KHz. SPDIF I/O provides connectivity to consumer electronic equipment. The STAC9200 incorporates TSI's proprietary SD technology to achieve an estimated DAC SNR in excess of 100dB. The STAC9200 provides high quality, HD Audio capability to notebook and cost sensitive desktop PC applications.

Features

- High performance SD technology
- 100dB DAC SNR
- Intel HD Audio Interface
- Two Channel DACs and ADCs with 24-bit resolution
- Sample rates up to 192 KHz
- Mixer-less design
 - Low-latency Karaoke Mode Supported
- Integrated Headphone Amplifiers
- Stereo Microphone
 - Supports Stereo Microphone
 - Microphone Boost 0, 10, 20, 30, 40dB
- Direct CDROM Recording Mixerless Design
- S/PDIF In and Out
- Universal Jacks™ Functionality for jack retasking
- Adjustable VREF Out
- Digital PC Beep to all outputs
- +3.3 V, +4 V and +5 V analog power supply options
(The +4 V Analog voltage is supported by the +5 V version of the STAC9200. Request +4 V configuration of the driver.)
- 32-pad QFN (5mm x 5mm) and 48-pin LQFP package options

STAC9200

2-Channel High Definition Audio Codec

1. DESCRIPTION

The STAC9200 is a high quality, 2-channel audio CODEC compatible with the Intel High Definition (HD) Audio Interface (formerly known as "Azalia"). The STAC9200 provides high quality, HD Audio capability to notebook and cost sensitive desktop PC applications. The STAC9200 has been designed as a drop-in replacement for the STAC9772/73 Dual Mode (HD Audio and AC97) 2-channel CODEC once the need to support AC97 is eliminated.

The STAC9200 incorporates TSI's proprietary SD technology to achieve a DAC SNR in excess of 100dB. The higher performance and quality of TSI's audio solutions brings consumer device level performance to the notebook, desktop and media center PCs.

The STAC9200 provides Stereo 24-Bit, full duplex resolution supporting sample rates up to 192 KHz by the DAC and ADC. The STAC9200 DAC, ADC and SPDIF In/Out support sample rates of 96 KHz, 48 KHz and 44.1 KHz. Additionally, the SPDIF Out supports 32 KHz. The CODEC's driver supports additional sample rate options.

The STAC9200 supports all desired two channel configurations, including switchable Headphone Out, and Universal Jacks™ functionality for automatic jack detection sensing and retasking. The SPDIF interface provides connectivity to Consumer Electronic equipment like Dolby Digital decoders, powered speakers, mini disk drives or to a home entertainment system. All analog I/O pairs support LINE_IN, LINE_OUT and MIC.

MIC inputs can be programmed with 0/10/20/30/40dB boost. For more advanced configurations, the STAC9200 has four General Purpose I/O (GPIO) pins. The STAC9200 also provides a single ended CD input to avoid DRM incompatibility and to support legacy OS issues.

The STAC9200 integrates a headphone amplifier which is available on Ports A and D. The headphone amplifier is switchable between these two outputs for increased flexibility, enhanced user experience, and reduced implementation costs.

The Universal Jack capabilities allow the CODEC to detect when audio devices are connected to the CODEC, sense the type of device (LINE_IN, LINE_OUT, MIC, Headphone) that is inserted, and to allow the CODEC to be reconfigured to support these devices wherever they are plugged into the system. SPDIF input sensing is also supported. The fully parametric TSI SoftEQ can be initiated upon headphone jack insertion and removal for protection of notebook speakers.

The STAC9200 operates with a 3.3V digital supply and is available in either 5V, 4V or 3.3V analog supply. The +4V Analog voltage is supported by the +5V version of the STAC9200 appropriate configuration settings of the driver.

The STAC9200 is available in 48-pin LQFP and 32-pad QFN package options. The 32-pad QFN package can be co-located inside the standard 48-pin footprint allowing systems to be designed to accept either version of the STAC9200 or be compatible with existing 48-pin CODECs. Both the 48-pin LQFP and the 32-pad QFN are available in the ROHS compliant Lead (Pb) free package.

The STAC9200 is supported with TSI's high quality software solutions which include drivers for all major Windows operating systems from Microsoft Parametric SoftEQ, and Digital Rights Management. Third party plugin capability is easily achieved with the TSI Kernel Processing Interface, to support high valued third party technologies like SRS WOW®, Knowles® Microphone Beam forming, Waves MaxxBASS® and more.

2. PERFORMANCE

2.1. Audio Fidelity

| | |
|----------|-------|
| DAC SNR: | 100dB |
| ADC SNR: | 90dB |

2.2. Electrical Specifications

2.2.1. Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the STAC9200. These ratings, which are standard values for TSI commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item | Pin | Maximum Rating |
|---------------------------------------|------|---|
| Analog maximum supply voltage | AVdd | 6 Volts |
| Digital maximum supply voltage | DVdd | 5.5 Volts |
| VREFOUT output current | | 5 mA |
| Voltage on any pin relative to ground | | Vss - 0.3 V to Vdd + 0.3 V |
| Operating temperature | | 0°C to +70°C |
| Storage temperature | | -55 °C to +125 °C |
| Soldering temperature | | 260 °C for 10 seconds * Soldering temperature information for all available packages begins on page 123. |

2.2.2. Recommended Operation Conditions

| Parameter | | Min. | Typ. | Max. | Units |
|--|-----------------------------|-------|------|-------|-------|
| Power Supply Voltage | Digital - 3.3 V | 3.135 | 3.3 | 3.465 | V |
| | Analog - 3.3 V | 3.135 | 3.3 | 3.465 | V |
| (Note: The +4V Analog voltage is supported by the +5V version of the STAC9200) | Analog - 4 V | 3.8 | 4 | 4.2 | V |
| | Analog - 5 V | 4.75 | 5 | 5.25 | V |
| Ambient Operating Temperature | | 0 | | +70 | °C |
| Case Temperature | T _{case} (48-LQFP) | | | +90 | °C |

ESD: The STAC9200 is an ESD (electrostatic discharge) sensitive device. The human body and test equipment can accumulate and discharge electrostatic charges up to 4000 Volts without detection. Even though the STAC9200 implements internal ESD protection circuitry, proper ESD precautions should be followed to avoid damaging the functionality or performance.

2.6. STAC9200 3.3V Analog Performance Characteristics

($T_{\text{ambient}} = 25\text{ }^{\circ}\text{C}$, $AV_{\text{dd}} = 3.3\text{V} \pm 5\%$, $DV_{\text{dd}} = 3.3\text{V} \pm 5\%$, $AV_{\text{ss}}=DV_{\text{ss}}=0\text{V}$; 1 KHz input sine wave; Sample Frequency = 48 KHz; 0 dB = 1 VRMS, 10 KW/50 pF load, Testbench Characterization BW: 20 Hz – 20 KHz, 0 dB settings on all gain stages)

Min and Max performance targets are not included here, as specific system characteristics, such as layout, routing and external CODEC component selection, influence the performance of the CODEC. To receive min/max levels for your system, please send us a unit and TSI will perform a full audio test suite and provide you with the results. Contact TSI for more information.

1. With +30 dB Boost on, 1.00 Vrms with Boost off.
2. Ratio of Full Scale signal to noise output with -60dB signal, measured "A weighted" over a 20 Hz to a 20 KHz bandwidth.
3. ± 1 dB limits for Line Output & 0 dB gain, at -20dBV
4. Ratio of Full Scale signal to THD+N output with -3dB signal, measured "A weighted" over a 20 Hz to a 20 KHz bandwidth. Sample Frequency = 48 KHz.
5. Ratio of Full Scale signal to idle channel noise output is measured "A weighted" over a 20 Hz to a 20 KHz bandwidth. (AES17-1991 Idle Channel Noise or EIAJ CP-307 Signal-to-noise Ratio).
6. Peak-to-Peak Ripple over Passband meets ± 0.25 dB limits, 48 KHz Sample Frequency.
7. Stop Band rejection determines filter requirements. Out-of-Band rejection determines audible noise.
8. The integrated Out-of-Band noise generated by the DAC process, during normal PCM audio playback, over a bandwidth 28.8 to 100 KHz, with respect to a 1 Vrms DAC output.

3. EXTENDED FEATURE EXPLANATION

3.1. SPDIF Input

SPDIF IN can run at 44.1 KHz, 48 KHz and 96 KHz, and has internal Jack Sensing.

A sophisticated digital PLL allows automatic rate detection and accurate data recovery. The ability to directly accept consumer SPDIF voltage levels eliminates the need for costly external receiver ICs. Advanced features such as record slot select and SPDIF_IN routing to the DAC allows for simultaneous record and play.

3.2. SPDIF Output

SPDIF Output can run at 44.1 KHz, 48 KHz, and 96 KHz at bit rates up to 24 bits, as defined in the Intel High Definition Audio Specification. This insures compatibility with all consumer audio gear and allows for convenient integration into home theater systems and multi-media centers.

3.3. Universal Jacks™

TSI's Universal Jacks™ technology allows for the greatest flexibility in board design and implementation.

For the STAC9200 the Universal Jacks™ capabilities are as follows

- All of the STAC9200 ports support:
 - Line Out
 - Line In
 - Mic with 0/10/20/30/40 dB Mic Boost
- Ports A and D also support
 - Headphone Out¹

¹Headphone capabilities are available on pins 39/41 and 35/36, but one should not put headphone loads on both sets of pins at the same time.

Note: On the STAC9200 only one function can be selected at a time, you cannot have an input and output at the same time on the same set of pins. This function can be changed at any time.

3.4. Audio Jack Presence Detect

Sense_A pin is used to detect the presence of plugs in ports A, B, C, and D. Refer to the reference design for port detect circuitry. Select the precision of the resistors used as follows:

| AVDD Nominal Voltage (+/- 5%) | Resistor Tolerance (If Port D is used) | Resistor Tolerance (If Port D is not used) |
|----------------------------------|---|---|
| 5V | 1% | 1% |
| 4.5V | 1% | 1% |
| 4V | 0.50% | 1% |
| 3.3V | 0.10% | 1% |

Includes pull-up resistors on Sense A and series resistors between jack switch and Sense A.

Divider = 00h disables internal PC Beep generation and enables normal operation of the CODEC.</p> <p>Divider not equal to 00h generates the beep tone on all Pin Complexes that are currently configured as outputs.</p> <p>The Azalia spec states that the beep tone frequency = (48 KHz Azalia SYNC rate) / (4*Divider), producing tones from 47 Hz to 12 KHz (logarithmic scale). Instead, this part generates tones with frequency = 48000 * (257 - Divider) / 1024, yielding a linear range from 12 KHz to 93.75 Hz in steps of 46.875 Hz. If JackSenseVSR[Rate2x], then the beep tones generated have frequency = 48000 * (513 - Divider) / 1024, yielding a range of 24 KHz to 12093.75 Hz in steps of 46.875 Hz.</p> |

6. ORDERING INFORMATION

6.1. STAC9200 Family Options and Part Order Numbers

The +4V Analog voltage is supported by the +5 V version of the STAC9200.

| Part Order Number | Voltage | DAC SNR | Pkg Pins |
|-------------------|---------|---------|----------|
| STAC9200X5TAEyy | 5 V | 100dB | 48 LQFP |
| STAC9200X5NAEyy | 5 V | 100dB | 32 QFN |
| STAC9200X3TAEyy | 3.3 V | 100dB | 48 LQFP |
| STAC9200X3NAEyy | 3.3 V | 100dB | 32 QFN |

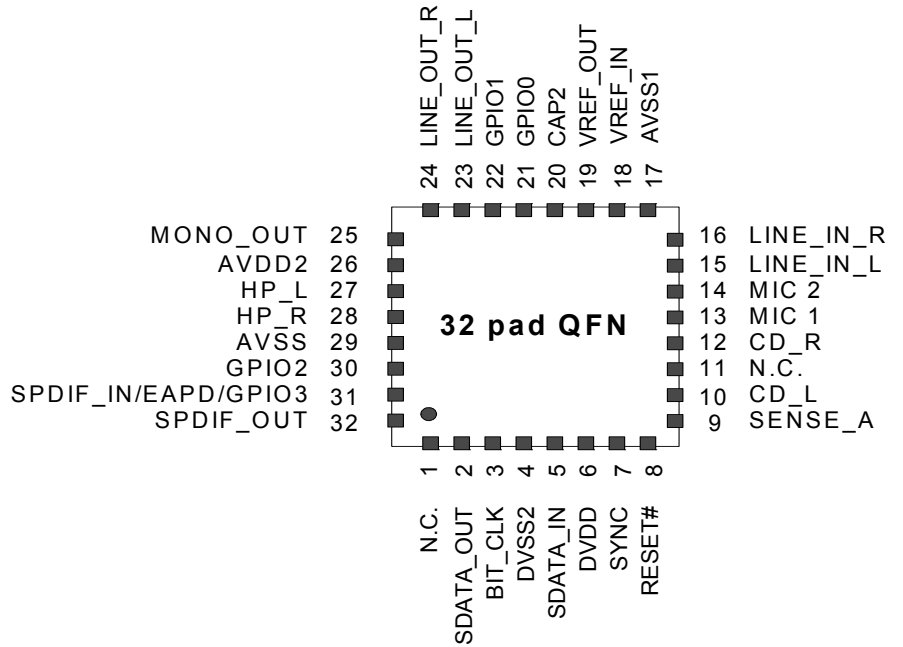

NOTE: When ordering these parts the “yy” will be replaced with the CODEC revision. Add an “R” to the end of any of these part numbers for delivery on Tape and Reel. The minimum order quantity for Tape and Reel is 2,000 units for both package options.

10. REVISION HISTORY

| Revision | Date | Description of Change |
|----------|-----------------|--|
| | | For STAC9200/9200D Revision CA1 |
| 0.5 | September 2004 | Initial release. |
| 0.6 | November 2004 | Updated the Connection Diagrams |
| 0.7 | November 2004 | Added Widget Tables |
| 0.8 | December 2004 | Added 5V Analog Performance Characteristics Table |
| | | FOR STAC9200/9200D Revision CB1 |
| 0.9 | January 2005 | Updated LQFP Package Drawing. Updated QFN Drawing. Updated Reflow profile information. Updated Widget Information- This is for the B1 revision of STAC9200/9200D. |
| 0.91 | February 2005 | Added Ordering Information. Updated Reflow profile. |
| 0.92 | April 2005 | Added Dolby part numbers, description and differences section, Added 5V Analog Performance Numbers with note about min/max, Added Power Consumption, Added 4V Analog supply information, Added comment for allowing GPIO to be used as microphone bias |
| 0.93 | July 2005 | Added in 3.3V Analog performance numbers. Added in 4V performance numbers. Replaced reflow profile- this was only for visual purposes. No changes were made to the Data. |
| 1.0 | | Updated logo |
| 1.1 | | Removed "Preliminary". Added Section 7.4 "Audio Jack Presence Detect." |
| 1.2 | June 2006 | Updated 32-pad Package Drawing |
| 1.3 | 10 October 2006 | Released in TSI format. |
| 1.4 | December 2006 | Updated AIDD Max spec |
| 1.5 | April 2007 | Corrected 32QFN diagram, removed typical connection diagrams as the reference design should be used instead. Updated table of contents, list of tables and figures. |
| 1.6 | Jan 2008 | removed STAC9200D option, as EOL notice issued Jan 2008. |
| 1.7 | May 2012 | Corrected SDATA I/O assignments in pin table. Removed Confidential footer |
| 1.8 | October 2014 | Released in TSI format |

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
