

HSMA-C400 Side-Fire Mono-Color Surface-Mount ChipLED

Description

The Broadcom[®] HSMA-C400 is a side-emitting surface-mount chipLED. This chipLED is available in industrial popular package footprint of 3.2 mm × 2.55 mm. This product comes with integrated optical lens that narrows the viewing angle of the light beam, thereby increasing the on-axis intensity. This allows effective light coupling into secondary optics, such as a light guide and a light pipe.

It offers industry-leading performance by using efficient and high-brightness AllnGaP LED materials.

This chipLED is ideal for applications that require narrow beam angle or high on-axis intensity. Examples include industrial equipment, consumer electronics, and black-and-white home appliances. It is compatible with industry-standard automatic machine placement and reflow soldering.

Features

- LED with AllnGaP Amber
- Compatible with reflow soldering
- Available in 8-mm tape on 7-in. diameter reels

Applications

- Backlighting
- Status indicator

CAUTION! LEDs are class 1A ESD sensitive per ANSI/ESDA/JEDEC JS-001. Please observe appropriate precautions during handling and processing. Refer to Application Note AN-1142 for additional details.

Figure 1: Package Dimensions

NOTE:

- 1. All dimensions are in millimeters.
- 2. Tolerance ±0.1 mm unless otherwise specified.
- 3. Dimensions in brackets are for reference only.

Absolute Maximum Value at $T_J = 25$ °C

Parameter	Rating	Units
DC Forward Current ^a	25	mA
Power Dissipation	60	mW
LED Junction Temperature	95	°C
Operating Temperature Range	-40 to +85	°C
Storage Temperature Range	-40 to +85	°C

a. Derate as shown in Figure 5.

Electrical Characteristics at $T_J = 25$ °C

	Forward Voltage V _F (Volts) ^a @ I _F = 20 mA		Reverse Current I _R (μΑ) ^b @ V _R = 5V	Thermal Resistance, Rθ _{J-S} (°C/W) ^c
Color	Min.	Max.	Max.	Тур.
Amber	1.6	2.4	100	500

- a. V_F tolerance: $\pm 0.1V$.
- b. Indicates product final test condition only. Long-term reverse bias is not recommended.
- c. Thermal resistance from LED junction to solder point.

Optical Characteristics at $T_J = 25$ °C

	Luminous Intensity I _V ^a (mcd) @ 20mA		Peak Wavelength λ _{peak} (nm)	Dominant Wavelength $\lambda_{\mathbf{d}}^{\mathbf{b}}$ (nm)	Viewing Angle 2θ _{1/2} ^c (Degrees)
Color	Min.	Max.	Тур.	Тур.	Тур.
Amber	28.5	450.0	592	588	90

- a. The luminous intensity is measured at the mechanical axis of the LED package. The actual peak of the spatial radiation pattern may not be aligned with the axis.
- b. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
- c. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $\frac{1}{2}$ the peak intensity.

Bin Information

Intensity Bins (CAT)

	Luminous Intensity (mcd)		
Bin ID	Min.	Max.	
N	28.5	45.0	
Р	45.0	71.5	
Q	71.5	112.5	
R	112.5	180.0	
S	180.0	285.0	
Т	285.0	450.0	

Tolerance ±15%.

Color Bins (BIN)

	Dominant Wavelength (nm)		
Bin ID	Min.	Max.	
Α	582.0	584.5	
В	584.5	587.0	
С	587.0	589.5	
D	589.5	592.0	
E	592.0	594.5	
F	594.5	597.0	

Tolerance ±1 nm.

Soldering

Figure 10: Recommended Reflow Soldering Conditions

- Reflow soldering must not be done more than twice.
 Observe necessary precautions of handling moisture sensitive device as stated in the following section.
- Do not apply any pressure or force on the LED during reflow and after reflow when the LED is still hot.
- Use reflow soldering to solder the LED. If unavoidable (such as rework), use manual hand soldering strictly controlled to the following conditions:
 - Soldering iron tip temperature = 310°C maximum
 - Soldering duration = 2 seconds maximum
 - Number of cycles = 1 only
 - Power of soldering iron = 50W maximum
- Do not touch the LED package body with the soldering iron except for the soldering terminals because it might cause damage to the LED.

 Confirm beforehand whether the functionality and performance of the LED is affected by hand soldering.

Precautionary Notes

Handling of a Moisture-Sensitive Device

This product has a Moisture Sensitive Level 2a rating per JEDEC J-STD-020. Refer to Broadcom Application Note AN5305, *Handling of Moisture Sensitive Surface Mount Devices*, for additional details and a review of proper handling procedures.

Before use:

- An unopened moisture barrier bag (MBB) can be stored at < 40°C/90% RH for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, it is safe to reflow the LEDs per the original MSL rating.
- Do not open the MBB prior to assembly (for example, for IQC).

Control after opening the MBB:

- Read the HIC immediately upon opening the MBB.
- Keep the LEDs at < 30°C/60% RH at all times, and all high-temperature-related processes, including soldering, curing, or rework, must be completed within 672 hours.

Control for unfinished reel:

Store unused LEDs in a sealed MBB with desiccant or desiccator at < 5% RH.

Control of assembled boards:

If the PCB soldered with the LEDs is to be subjected to other high-temperature processes, store the PCB in a sealed MBB with desiccant or desiccator at < 5% RH to ensure that all LEDs have not exceeded their floor life of 672 hours.

Baking is required if the following conditions exist:

- The HIC indicator indicates a change in color for 10% and 5% as stated on the HIC.
- The LEDs are exposed to conditions of > 30°C/60% RH at any time.
- The LEDs' floor life exceeded 672 hours.

The recommended baking condition is: 60°C ±5°C for 20 hours.

Baking should only be done once.

Application Precautions

- The drive current of the LED must not exceed the maximum allowable limit across temperature as stated in the data sheet. Constant current driving is recommended to ensure consistent performance.
- LEDs exhibit slightly different characteristics at different drive currents that might result in larger performance variations (that is, intensity, wavelength, and forward voltage). Set the application current as close as possible to the test current to minimize these variations.
- The LED is not intended for reverse bias. Use other appropriate components for such purposes. When driving the LED in matrix form, ensure that the reverse bias voltage does not exceed the allowable limit of the LED.
- Avoid rapid change in ambient temperature, especially in high-humidity environments, because this will cause condensation on the LED.
- If the LED is intended to be used in harsh environments, protect the LED against damages caused by rain water, dust, oil, corrosive gases, external mechanical stress, and so on.

Eye Safety and Precautions

LEDs may pose optical hazards when in operation. Do not look directly at operating LEDs as it may be harmful to the eyes. For safety reasons, use appropriate shielding or personnel protection equipment.

ПОСТАВКА ЭЛЕКТРОННЫХ КОМПОНЕНТОВ

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001 Адрес: 105318, г.Москва, ул.Щербаковская д.3, офис 1107

Данный компонент на территории Российской Федерации Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
