FEATURES

- 2-channels (Form A) type with high response speed, low leakage current and low on-resistance.**
- Applicable for 2 Form A use as well as two independent 1 Form A use**
- Low capacitance between output terminals ensures high response speed:**
The capacitance between output terminals is small; typ. 10 pF. This enables for a fast operation speed of typ. 0.2 ms.
- High sensitivity and low on-resistance:**
Max. 0.07 A of load current can be controlled with input current of 5 mA. The on-resistance is less than our conventional models.
- Low-level off state leakage current**
- Controls low-level analog signals:**
PhotoMOS features extremely low closed-circuit offset voltages to enable control of small analog signals without distortion.

TYPICAL APPLICATIONS

- **Measuring instruments**
Scanner, IC checker, Board tester, etc.
