Power-on Sequence

1. Turn On the power supplies so that the power supplies rise in order of 1.2 V power supply (DV_{DD}) → 1.8 V power supply (OV_{DD}) → 2.9 V power supply (AV_{DD}). In addition, all power supplies should finish rising within 200 ms.
2. Start master clock (INCK) input after turning On the power supplies.
3. The register values are undefined immediately after power-on, so the system must be cleared. Hold XCLR at Low level for 500 ns or more after all the power supplies have finished rising. (The register values after a system clear are the default values.) In addition, hold XCE to High level during this period. Rise XCE after 1.8 V power supply (OV_{DD}).
4. The system clear is applied by setting XCLR to High level. However, the maser clock needs to stabilize before setting the XCLR pin to High level.
5. Make the sensor setting by register communication after the system clear. A period of 20 μ s or more should be provided after setting XCLR High before inputting the communication enable signal XCE. In I^2C communication, XCE is fixed to High.

Item	Symbol	Min.	Max.	Unit
1.2 V power supply rising → 1.8 V power supply rising	T_0	0	—	ns
1.8 V power supply rising → 2.9 V power supply rising	T_1	0	—	ns
Rising time of all power supply	T_2	—	200	ms
INCK active → Clear OFF	T_{LOW}	500	—	ns
Clear OFF → Communication start	T_{XCE}	20	—	μ s
Standby OFF (communication) → External input XHS, XVS (slave mode only)	T_{SYNC}	20	—	ms

Power-off Sequence

Turn Off the power supplies so that the power supplies fall in order of 2.9 V power supply (AV_{DD}) → 1.8 V power supply (OV_{DD}) → 1.2 V power supply (DV_{DD}). In addition, all power supplies should falling within 200 ms. Set each digital input pin (INCK, XCE, SCK, SDI, XCLR, XMASTER, OMODE, XVS, XHS) to 0 V before the 1.8 V power supply (OV_{DD}) falls.

Item	Symbol	Min.	Max.	Unit
Standby ON (communication) → LP11 mode start	T_{STB}	Until FE		—
LP00 → XCLR falling	T_{CLR}	128	—	cycle
2.9 V power shut down → 1.8 V power shut down	T4	0	—	ns
1.8 V power shut down → 1.2 V power shut down	T5	0	—	ns
Shut down time of all power supply	T6	—	200	ms
