

DOUBLE BALANCED MODULATION / DEMODULATION

■ GENERAL DESCRIPTION

The **NJM2594** is a double balanced modulation/demodulation circuit, applied to suppressed carrier modulation, amplitude modulation, synchronous detection, FM or PM detection circuit.

Single input voltage and simplification of external circuit offers wider applications.

■ PACKAGE OUTLINE

NJM2594M

NJM2594V

■ FEATURES

- Operating Voltage 4.5 to 9V
- Excellent Carrier Suppression
- Simplification of External Circuit
- Bipolar Technology
- Package Outline DMP8, SSOP8

■ BLOCK DIAGRAM

BLOCK DIAGRAM

NJM2594

■ ABSOLUTE MAXIMUM RATINGS

(Ta=25°C)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage	V ⁺	14.0	V
Power Dissipation	P _D	250(SSOP-8), 300(DMP-8)	mW
Operating Temperature	T _{opr}	- 40 to +85	°C
Storage Temperature	T _{stg}	- 40 to +125	°C
Output 2 Drive Current	I _d	10	mA

■ RECOMMENDED OPERATIONAL CONDITION

(Ta=25°C)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT
Supply Voltage	V ⁺		4.5	5.0	9.0	V

■ ELECTRICAL CHARACTERISTICS

(Ta=25°C, V⁺=5.0V)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN.	TYP.	MAX.	UNIT
Current Consumption	I _{cc}	No Signal	-	11	14	mA
Conversion Gain	G _c	note(1)	- 2.0	0	+ 2.0	dB
Signal Leakage Level	L _s	note(1)	-	-35	-20	dB
Carrier Leakage Level	L _c	note(1)	-	-40	-20	dB
Intermodulation	IMD	note (2)	-	- 60	-	dB
Signal Input Resistance	R _s		-	600	-	Ω
Signal Input Capacitance	C _s	note (7)	-	3.8	-	pF
Carrier Input Resistance	R _c		-	1200	-	Ω
Carrier Input Capacitance	C _c	note (7)	-	2.2	-	pF
Output Resistance	R _o	OUTPUT1 terminal	-	350	-	Ω
Output Capacitance	C _o	OUTPUT1 terminal note (7)	-	2.6	-	pF

Notes :

- (1) Input signal : Fs=1.75MHz, 70mVrms(-10dBm)
Carrier signal : Fc=28.25MHz, 100mVrms(-7dBm)
Desired output signal : fundamental carrier upper-sideband output, Fd=30MHz
- (2) Input signal 1 : Fs1=1.75MHz, 42.5mVrms(-14.42dBm)
Input signal 2 : Fs2=2.00MHz, 42.5mVrms(-14.42dBm)
Carrier signal : Fc=28.25MHz, 100mVrms(-7dBm)
- (3) The ratio of desired output signal level to input signal level
- (4) The ratio of output signal at input signal frequency to desired output signal
- (5) The ratio of output signal at carrier signal frequency to desired output signal
- (6) The ratio of 29.75MHz Intermodulation signal to desired output signal
- (7) Measured at 10MHz

■ MEASUREMENT CIRCUIT

● Emitter - follower Output

Items for measurement : Conversion Gain, Signal Leakage Level, Carrier Leakage Level, Intermodulation
 Measured at OUTPUT2 (pin 3)

TEST CIRCUIT 1

● Collector Output

Items for measurement : Current Consumption
 Measured at OUTPUT1 (pin2)

TEST CIRCUIT 2

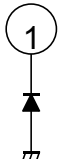

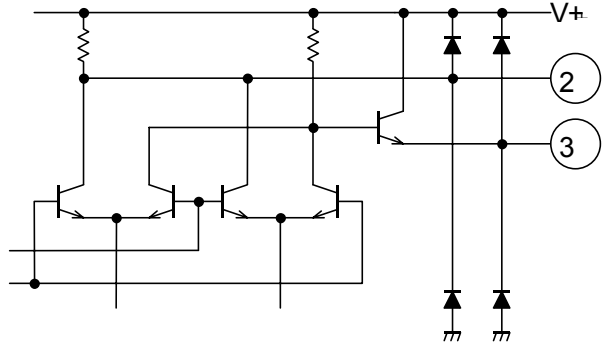

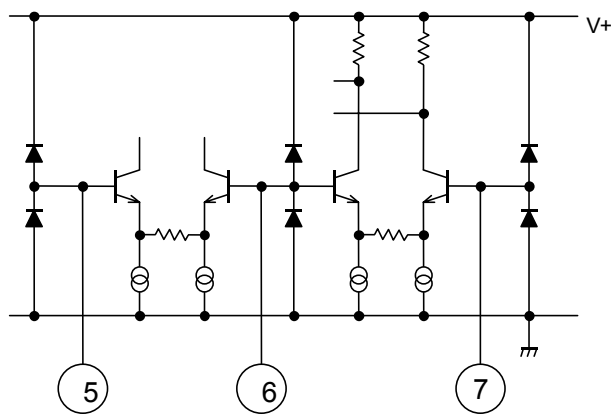

Notes :

(1) Impedance-matching resistor

NJM2594

■ TERMINAL FUNCTION

(Ta=25°C, V+=5.0V)

Pin No.	SYMBOL	EQUIVALENT CIRCUIT	VOLTAGE	FUNCTION
1	V+		5V	Power Supply.
2	OUTPUT1		4.0V	Collector Output.
3	OUTPUT2		3.3V	Emitter Output. Since there is no internal resistor to the ground, emitter current may be obtained by connecting an external resistor. This terminal voltage is obtained with a 510Ω external resistor.
4	GND		--	Ground.
5	SIGNAL INPUT		2.2V	Signal Input Terminal.
6	BYPASS		2.2V	Common base lead of two differential circuits. This terminal should be connected externally to AC ground.
7	CARRIER INPUT		2.2V	Carrier Input Terminal.
8	NC		--	No Connect. The NC terminal is not connected to internal circuit so that this terminal can be open or grounded.

■ APPLICATION CIRCUIT

● Emitter - follower output

● Collector output

- The impedance of AC coupling capacitor connected to input / output terminals should be adequately low at the frequency of input / output signals, respectively.
- The impedance of base-coupling capacitor connected to BYPASS terminal should be adequately low against the both of input/output signals to keep better performance on leakage and distortion characteristics.
- In case of APPLICATION CIRCUIT 1, idle (emitter) current may be supplied by adding an external resistor between OUTPUT2 (pin3) and ground.

The relation of idle current I_i and external resistance R_L is determined by :

$$R_L \sim \frac{V^+ - 1.7}{I_i}$$

- Note that there is some degradation in intermodulation characteristics with increasing the external resistance R_L , or decreasing a load impedance of Emitter-follower output.
- The level of output signal comes constant at carrier input signal level over 100mV (see Typical Characteristics).

■ HOW TO DECREASE LEAKAGE LEVEL

By adjusting DC bias of SIGNAL INPUT terminal, carrier leakage level may be decreased. By adjusting DC bias of CARRIER INPUT terminal, signal leakage level may be decreased. In actual circuit, it can be seen the case that either of these adjustment is provided, not both.

LEAKAGE ADJUSTMENT CIRCUIT

■ EVALUATION PC BOARD

The evaluation PC board shown in next page is useful for your design and is intended to have more understanding of the usage and performance of this device. Two kinds of board are prepared for two packages, SSOP and DMP, respectively. Each board can be applied to two kinds of circuit, emitter-follower output type and collector output type, as shown below. This circuit is the same as MEASUREMENT CIRCUIT. For other electrical conditions, it should be necessary to reconsider each value of components, especially of capacitance.

Note that this board is not prepared to show the recommendation of pattern and parts layout.

■ TYPICAL CHARACTERISTICS (Ta=25°C, V+=5.0V, unless otherwise noted)

Operating Current versus Supply Voltage

2pin Output Voltage versus Supply Voltage

3pin Output Voltage versus Supply Voltage

5/6/7 pin Output Voltage versus Supply Voltage

Conversion Gain versus Supply Voltage

Intermodulation versus Supply Voltage

Signal Leakage Level versus Supply Voltage

Carrier Leakage Level versus Supply Voltage

■ TYPICAL CHARACTERISTICS (Ta=25°C, V+=5.0V, unless otherwise noted)

Note :

- (1) OUTPUT2 level (dB):
 the ratio of OUTPUT2 Level to input signal level.

■ TYPICAL CHARACTERISTICS ($T_a=25^{\circ}\text{C}$, $V^+=5.0\text{V}$, unless otherwise noted)

Operating Current versus Ambient Temperature

2pin Output Voltage versus Ambient Temperature

3pin Output Voltage versus Ambient Temperature

5/6/7 pin Output Voltage versus Ambient Temperature

Conversion Gain versus Ambient Temperature

Intermodulation versus Ambient Temperature

Signal Leakage Level versus Ambient Temperature

Carrier Leakage Level versus Ambient Temperature

[CAUTION]

The specifications on this databook are only given for information, without any guarantee as regards either mistakes or omissions. The application circuits in this databook are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
