

RF360 Europe GmbH

A Qualcomm – TDK Joint Venture

SAW Components

SAW filter

Short range devices

Series/type: B3958
Ordering code: B39321B3958H110

Date: December 18, 2015
Version: 2.0

RF360 products mentioned within this document are offered by RF360 Europe GmbH and other subsidiaries of RF360 Holdings Singapore Pte. Ltd. (collectively, the "RF360 Subsidiaries"). RF360 Holdings Singapore Pte. Ltd. is a joint venture of Qualcomm Global Trading Pte. Ltd. and EPCOS AG. References in this documentation to EPCOS AG should properly reference, and shall be read to reference, the RF360 Subsidiaries.

EPCOS AG is a TDK Group Company.

Application

- Low-loss RF filter for remote control receivers
- Two pass bands around 313.85 MHz and 315.00 MHz
- Balanced and unbalanced operation possible

**Features**

- Package size 3.0 x 3.0 x 1.0 mm³
- Package code DCC6E
- RoHS compatible
- Approximate weight 0.037 g
- Package for **Surface Mount Technology (SMT)**
- Ni, gold-plated terminals
- Lead free soldering compatible with J - STD20C
- Passivation layer Elpas
- AEC-Q200 qualified component family
- **Electrostatic Sensitive Device (ESD)**

**Pin configuration¹⁾**

- 1 Input (recommended) or input ground
- 2 Input ground (recommended) or input
- 4 Output (recommended) or output ground
- 5 Output ground (recommended) or output
- 3, 6 To be grounded

1) The recommended pin configuration usually offers best suppression of electrical crosstalk. The filter characteristics refer to this configuration.

Characteristics

Temperature range for specification: $T = -45^{\circ}\text{C}$ to $+105^{\circ}\text{C}$
 Terminating source impedance: $Z_S = 50\Omega$ and matching network
 Terminating load impedance: $Z_L = 50\Omega$ and matching network

		min.	typ. @ 25 °C	max.	
Pass band 1					
Center frequency	f_{C1}	—	313.85	—	MHz
Minimum insertion attenuation	$\alpha_{\min 1}$				
incl. loss in matching elements ($Q_L=42$)		—	2.6	3.2	dB
excl. loss in matching elements		—	1.6	2.2	dB
Pass band (relative to $\alpha_{\min 1}$)					
313.50 ... 314.20 MHz		—	1.0	1.5	dB
313.47 ... 314.23 MHz		—	1.6	3.0	dB
Pass band 2					
Center frequency	f_{C2}	—	315.00	—	MHz
Minimum insertion attenuation	$\alpha_{\min 2}$				
incl. loss in matching elements ($Q_L=42$)		—	2.7	3.3	dB
excl. loss in matching elements		—	1.7	2.3	dB
Pass band (relative to $\alpha_{\min 2}$)					
314.85 ... 315.15 MHz		—	1.0	1.5	dB
314.82 ... 315.18 MHz		—	1.5	3.0	dB
Relative attenuation (relative to $\alpha_{\min 2}$)	α_{rel}				
10.00 ... 250.00 MHz		50	56	—	dB
250.00 ... 280.00 MHz		44	50	—	dB
280.00 ... 300.00 MHz		38	44	—	dB
300.00 ... 307.00 MHz		34	39	—	dB
307.00 ... 312.00 MHz		22	28	—	dB
312.00 ... 312.50 MHz		17	23	—	dB
314.50 ... 314.60 MHz		—	6	—	dB
315.80 ... 317.00 MHz		13	18	—	dB
317.00 ... 319.00 MHz		22	27	—	dB
319.00 ... 324.00 MHz		18	23	—	dB
324.00 ... 329.00 MHz		30	35	—	dB
329.00 ... 340.00 MHz		35	41	—	dB
340.00 ... 360.00 MHz		42	48	—	dB
360.00 ... 700.00 MHz		48	54	—	dB
700.00 ... 1700.00 MHz		60	66	—	dB
1700.00 ... 2500.00 MHz		55	61	—	dB
Impedance for pass band matching¹⁾					
Input: $Z_{IN} = R_{IN} \parallel C_{IN}$		—	960 \parallel 2.5	—	$\Omega \parallel \text{pF}$
Output: $Z_{OUT} = R_{OUT} \parallel C_{OUT}$		—	960 \parallel 2.5	—	$\Omega \parallel \text{pF}$

¹⁾ Impedance for passband matching bases on an ideal, perfect matching of the SAW filter to source- and to load impedance (here 50 Ohm). After removal of the SAW filter the input impedance of the input and output matching network is calculated. The conjugate complex value of these characteristic impedances are the input and output impedances for flat passband. For more details we refer to EPCOS application note #18.

SAW filter

313.85 / 315.00 MHz

Data sheet

 SMD**Maximum ratings**

Operable temperature range	T	–45/+125	°C	
Storage temperature range	T _{stg}	–45/+125	°C	
DC voltage	V _{DC}	6	V	
Source power	P _S	10	dBm	source impedance 50 Ω

Matching network to 50 Ω (element values depend on pcb layout and equivalent circuit)

$$C_{p1} = 10 \text{ pF}$$

$$L_{s2} = 100 \text{ nH}$$

$$L_{s3} = 100 \text{ nH}$$

$$C_{p4} = 8.2 \text{ pF}$$

Minimising the crosstalk

For a good ultimate rejection a low crosstalk is necessary. Low crosstalk can be realised with a good RF layout. The major crosstalk mechanism is caused by the "ground-loop" problem.

Grounding loops are created if input-and output transducer GND are connected on the top-side of the PCB and fed to the system grounding plane by a common via hole. To avoid the common ground path, the ground pin of the input- and output transducer are fed to the system ground plane (bottom PCB plane) by their own via hole. The transducers' grounding pins should be isolated from the upper grounding plane.

A common GND inductivity of 0.5nH degrades the ultimate rejection (crosstalk) by 20dB.

The optimised PCB layout, including matching network for transformation to 50 Ohm, is shown here. In this PCB layout the grounding loops are minimised to realise good ultimate rejection

Optimised PCB layout for SAW filters in DCC6E package, pinning 1,4 (top side, scale 1:1)

The bottom side is a copper plane (system ground area). The input and output grounding pins are isolated and connected to the common ground by separated via holes.

For good contact of the upper grounding area with the lower side it is necessary to place enough via holes.

ESD protection of SAW filters

SAW filters are Electro Static Discharge sensitive devices. To reduce the probability of damages caused by ESD, special matching topologies have to be applied.

In general, "ESD matching" has to be ensured at that filter port, where electrostatic discharge is expected.

Electrostatic discharges predominantly appear at the antenna input of RF receivers. Therefore only the input matching of the SAW filter has to be designed to short circuit or to block the ESD pulse.

Below two figures show recommended "ESD matching" topologies.

Depending on the input impedance of the SAW filter and the source impedance, the needed component values have to be determined from case to case.

Fig. 1 MLC varistor plus ESD matching

Fig. 2 Suppressor diode plus ESD matching

In cases where minor ESD occur, following simplified "ESD matching" topologies can be used alternatively.

Fig. 3 shunt L – series L matching

Fig. 4 series C – shunt L matching

Effectiveness of the applied ESD protection has to be checked according to relevant industry standards or customer specific requirements.

For further information, please refer to EPCOS Application report:

"ESD protection for SAW filters". This report can be found under www.epcos.com/rke. Click on "data sheets" and then "Applications" under category "Further information".

For questions on technology, prices and delivery please contact the Sales Offices of EPCOS AG or the international Representatives.

Due to technical requirements components may contain dangerous substances. For information on the type in question please also contact one of our Sales Offices.

Important notes

The following applies to all products named in this publication:

1. Some parts of this publication contain **statements about the suitability of our products for certain areas of application**. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out **that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application**. As a rule, EPCOS is either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether an EPCOS product with the properties described in the product specification is suitable for use in a particular customer application.
2. We also point out that **in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified**. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
3. **The warnings, cautions and product-specific notes must be observed.**
4. In order to satisfy certain technical requirements, **some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous)**. Useful information on this will be found in our Material Data Sheets on the Internet (www.epcos.com/material). Should you have any more detailed questions, please contact our sales offices.
5. We constantly strive to improve our products. Consequently, **the products described in this publication may change from time to time**. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order.
We also reserve the right to discontinue production and delivery of products. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.
6. Unless otherwise agreed in individual contracts, **all orders are subject to the current version of the "General Terms of Delivery for Products and Services in the Electrical Industry" published by the German Electrical and Electronics Industry Association (ZVEI)**.
7. The trade names EPCOS, Alu-X, CeraDiode, CeraLink, CeraPad, CeraPlas, CSMP, CSSP, CTVS, DeltaCap, DigiSiMic, DSSP, ExoCore, FilterCap, FormFit, LeaXield, MiniBlue, MiniCell, MKD, MKK, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, PQSine, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, SIP5D, SIP5K, TFAP, ThermoFuse, WindCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at www.epcos.com/trademarks.

Данный компонент на территории Российской Федерации**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибуторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ Р В 0015-002 и ЭС РД 009
