

DATA SHEET

SKY12239-11: High IIP3 10 MHz to 1.5 GHz Voltage-Controlled Variable Attenuator

Applications

- Automatic power leveling/gain control circuits in cellular base stations and point-to-point radio IF chains
- General wireless systems including WiMAX, LTE, WCDMA, VSAT, and military communications

Features

- 10 MHz to 1.5 GHz broadband operating range
- Low insertion loss: 2.5 dB @ 700 MHz
- Maximum attenuation level: 40 dB @ 700 MHz
- Control voltage range: 1 to 5 V
- High IIP3: +50 dBm
- Low current consumption: < 2 mA @ maximum attenuation
- Small MCM (8-pin, 3.8 x 3.8 x 1 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Description

The SKY12239-11 is a voltage-controlled variable attenuator from Skyworks series of broadband, flat attenuation, high third order input intercept point (IIP3) components. The device has been designed to operate over the 10 MHz to 1.5 GHz frequency band, and is specifically optimized for use as a wide dynamic range, low distortion attenuator.

The SKY12239-11 provides monotonic attenuation performance over its entire control voltage range. This attenuator is comprised of four matched PIN diodes that are biased using an external control voltage signal. The attenuator requires no external components. It operates with a control voltage range of 1 to 5 V and a 2 mA typical control current at maximum attenuation.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. SKY12239-11 Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	RF_IN	RF input, AC coupled. No external components required.	5	L_OUT	Phase compensation inductor output
2	V_SUPPLY	Fixed reference supply, 2.7 Vdc.	6	L_IN	Phase compensation inductor input
3	RF_OUT	RF output, AC coupled. No external components required.	7	GND	Paddle of the device. Ground to the Applications Board. Provides thermal contact and RF ground.
4	V_CONTROL	Variable reference supply, 1.0 V to 5.0 Vdc.			

Technical Description

The SKY12239-11 is a 50 Ω matched voltage controlled variable attenuator with monotonic attenuation performance from 10 MHz to 1.5 GHz over its entire control voltage range. This attenuator requires no external biasing or RF matching components.

Monotonic performance means the attenuation increases or decreases as the applied DC voltage increases or decreases. This attenuator is comprised of four matched PIN diodes that terminate two ports of an internal matching network.

The diodes are biased using an external control voltage signal that sets the bias current through a resistive network. The attenuator operates with a control voltage range of 1 to 5 V and a 2 mA typical control current at maximum attenuation. As the control voltage increases, the bias current through each of the PIN diodes also increases.

This increased bias current lowers the resistance of the PIN diodes. Maximum attenuation occurs when the resistance of the PIN diodes is at maximum (control voltage of approximately 1 VDC).

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY12239-11 are provided in Table 2. Electrical specifications are provided in Table 3.

Performance characteristics for the SKY12239-11 are illustrated in Figures 3 through 8.

Table 2. SKY12239-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Control voltage	V _{CTRL}	0	5.5	V
Reference voltage	V _{SUPPLY}		5.5	V
RF input power (CW)	P _{IN}		1	W
Control current	I _{CC}		50	mA
Thermal impedance (V _{CTRL} = 5 V, V _{SUPPLY} = 2.7 V, P _{IN} = +21 dBm)	θ_{JC}		+94	°C/W
Storage temperature	T _{STG}	-55	+125	°C
Operating temperature	T _{OP}	-40	+105	°C
Electrostatic discharge:	ESD			
Charged Device Model (CDM), Class C3			1000	V
Human Body Model (HBM), Class 2			3000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

Table 3. SKY12239-11 Electrical Specifications¹**(TOP = +25 °C, VCTRL = 1 to 5 V, VSUPPLY = 2.7 V, PIN = 0 dBm, Characteristic Impedance [Zo] = 50 Ω, Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min ²	Typ	Max	Units
RF Specifications

Evaluation Board Description

The SKY12239-11 Evaluation Board is used to test the performance of the SKY12239-11 variable attenuator. A schematic of the Evaluation Board is shown in Figure 9. Table 4 lists the Bill of Materials. An assembly drawing for the Evaluation Board is shown in Figure 10. The Evaluation Board layer detail is shown in Figure 11.

The attenuation level of the SKY12239-11 is controlled by applying 1 to 5 V to the V_CONTROL pins.

Figure 11. Layer Detail Physical Characteristics

Package Dimensions

The PCB layout footprint for the SKY12239-11 is shown in Figure 12. Typical part markings are shown in Figure 13. Package dimensions are shown in Figure 14, and tape and reel dimensions are provided in Figure 15.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY12239-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design & SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. Thermal vias should be resin filled and capped in accordance with IPC-4761 type VII vias.
2. Recommended Cu thickness is 30 to 35 μm .

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
