

# BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

BluNor BC840 is a powerful, highly flexible, ultra low power Bluetooth Low Energy (BLE) using Nordic nRF52840 SoC. With an ARM Cortex™ M4F MCU, available 1MB flash, 256KB RAM, embedded 2.4GHz multi-protocol transceiver, and an integrated PCB trace antenna. It allows faster time to market with reduced development cost.

- **BC840** is an ultra compact(7.0x9.0x1.5mm) and ultra short range (10 meters with an Android phone) module for wearable application.
- **BC832M** is compact in size. Its range is measured at 135 meters for 1Mbps data rate.
- **BC840E** is an ultra compact (7.0x12x1.8mm) module with ultra long range (3400 meters at 125 Kbps, Low Multiple Path Interference). Per FCC test reports, the peak TX power with ANT060 antenna is +15.38 dBm.

## Specifications:

- nRF52840 CCAA, ARM Cortex M4F, 64 MHz
- ARM® TrustZone® Cryptocell-310 co-processor
- Complete RF solution with integrated antenna
- BLE 5 data: 2Mbps, 1Mbps, 500kbps, 125kbps.
- IEEE 802.15.4 Thread, Zigbee data: 250 Kbps
- 2.4 GHz proprietary data rate: 2 Mbps, 1 Mbps
- DC-DC converter, inductors on board.
- Direct powered by Lithium batteries or USB supply (up to 5.5V)
- 32 MHz main crystal on board.
- Serial Wire Debug (SWD)
- Nordic SoftDevice Ready
- Over-the-Air (OTA) firmware update
- Flash/RAM: 1MB/256KB.
- 48 General purpose I/O pins
- USB 2.0 full speed (12 Mbps) controller
- QSPI 32 MHz interface
- High speed 32 MHz SPI
- Type 2 NFC-A tag with wake-on field, Touch-to-pair support
- Programmable peripheral interconnect (PPI)
- 12 bit/200 Ksps ADC, 8 configurable channels with programmable gain
- 64 level comparator
- 15 level comparator with wake-up from OFF mode
- Temperature sensor
- 4x4-channel pulse width modulator (PWM)
- Audio peripherals: I2S, digital microphone interface (PDM)
- 5 x 32 bit timers with counter mode
- Up to 4x SPI masters/3x SPI slaves
- Up to 2x I2C compatible 2-wire masters/slaves
- 2x UART (CTS/RTS)
- Quadrature Demodulator (QDEC)
- 3x real time counters (RTC)
- 128-bit AES HW encryption
- SoC Receiver Sensitivity: -96 dBm at 1Mbps
- SoC TX power: programmable +8dBm to -20dBm.
- LGA, 64 pins.
- Integrated PCB trace antenna
- Operation voltage: 1.7V to 5.5V
- Operation temperature: -40°C to +85°C
- QDID: 108621
- FCC ID: X8WBC840M
- IC IC: 4100A-BC840M
- CE: Certified
- Japan TELEC: 201-190140
- Australia RCM: Certified.

## Model Summaries

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

### 1. Introduction

BluNor BC840 Series are powerful, highly flexible, ultra low power wireless modules using Nordic nRF52840 SoCs. With an ARM Cortex™ M4F MCU, 1MB flash, 256KB RAM, embedded 2.4GHz multi-protocol transceiver, and an integrated antenna, it allows faster time to market with reduced development cost.

The following is a block diagram of BC840. Antenna circuit and main clock are integrated. All 48 GPIOs of nRF52840 can be accessed from main board. For lower power consumption at idle state, a 32.768 kHz crystal can be added on the host board. Connection to an external NFC (Near Field Communication) antenna is provided.

### BC840 Block Diagram

BlueNor BC840M is a sister module of BC840. The physical size is slightly larger to accommodate longer range PCB trace antenna. BC840E is with an u.FL connector for an external antenna.

BC840 and BC840M common features:

- nRF52840 CCAA with Cortex M4F MCU
- 1MB flash, 256 KB RAM
- Supports NFC
- 64 LGA pins
- 48 GPIOs

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

### BC840, ultra compact and ultra short range module for wearable

- At 1Mbps, range is 4 meters between modules and 10 meters with an Android phone.
- Size: 7.0x9.0x1.5 mm.

### BC840M, compact and good range module

- Range is 400 meters at 125 Kbps and 135 meters at 1Mbps.
- Size: 7.0x12.0x1.5mm. Antenna area width is 10.0mm.

### BC840E, ultra compact and ultra long range module

- With an u.FL connector for external antenna.
- Size: 7.0x12.0x1.5 mm.
- Certified with Fanstel ANT060 antenna for FCC and IC.

- Certified with Fanstel ANT020 antenna for CE, RCM, and TELEC.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

### 2. Codes Development Using Nordic Tools

Development tools by Nordic and other third party development tools recommended by Nordic should be used .

#### Easy, fast and safe code development

Nordic development environment for nRF52840 offers a clean separation between application code development and embedded protocol stacks. This means compile, link and run time dependencies with the embedded stack and associated debugging challenges are removed. The Bluetooth low energy and ANT stack is a pre-compiled binary, leaving application code to be compiled stand-alone. The embedded stack interface uses an asynchronous and event driven model removing the need for RTOS frameworks.

#### Over-The-Air DFU

The nRF52840 is supported by an Over-The-Air Device Firmware Upgrade (OTA DFU) feature. This allows for in the field updates of application software and SoftDevice.

#### SoftDevices

The Nordic protocol stacks are known as SoftDevices and complement the nRF52 Series SoCs. All nRF52 Series are programmable with software stacks from Nordic. This bring maximum flexibility to application development and allows the latest stack version to be programmed into the SoC.

SoftDevices available from Nordic:

**S140:** Bluetooth low energy concurrent central/peripheral/observer/broadcaster stack.

#### Development Tools

Nordic Semiconductor provides a complete range of hardware and software development tools for the nRF52 Series devices. nRF52 DK board is recommended for firmware development.

Nordic software development tools can be downloaded from the following webpage.

[http://infocenter.nordicsemi.com/index.jsp?topic=/com.nordic.infocenter.nrf52/dita/nrf52/development/nrf52\\_dev\\_kit.html&cp=1\\_1](http://infocenter.nordicsemi.com/index.jsp?topic=/com.nordic.infocenter.nrf52/dita/nrf52/development/nrf52_dev_kit.html&cp=1_1)

## 3. Product Descriptions

Brief description of nRF52840 SoC is provided. For full description of the SoC, please download from Nordic Semiconductor website.

<https://www.nordicsemi.com/eng/Products/Bluetooth-low-energy>

### Block Diagram of nRF52840

The following is a block diagram of Nordic nRF52840 Bluetooth Low Energy (BLE) SoC. Arrows with white heads indicate signals that share physical pins with other signals.

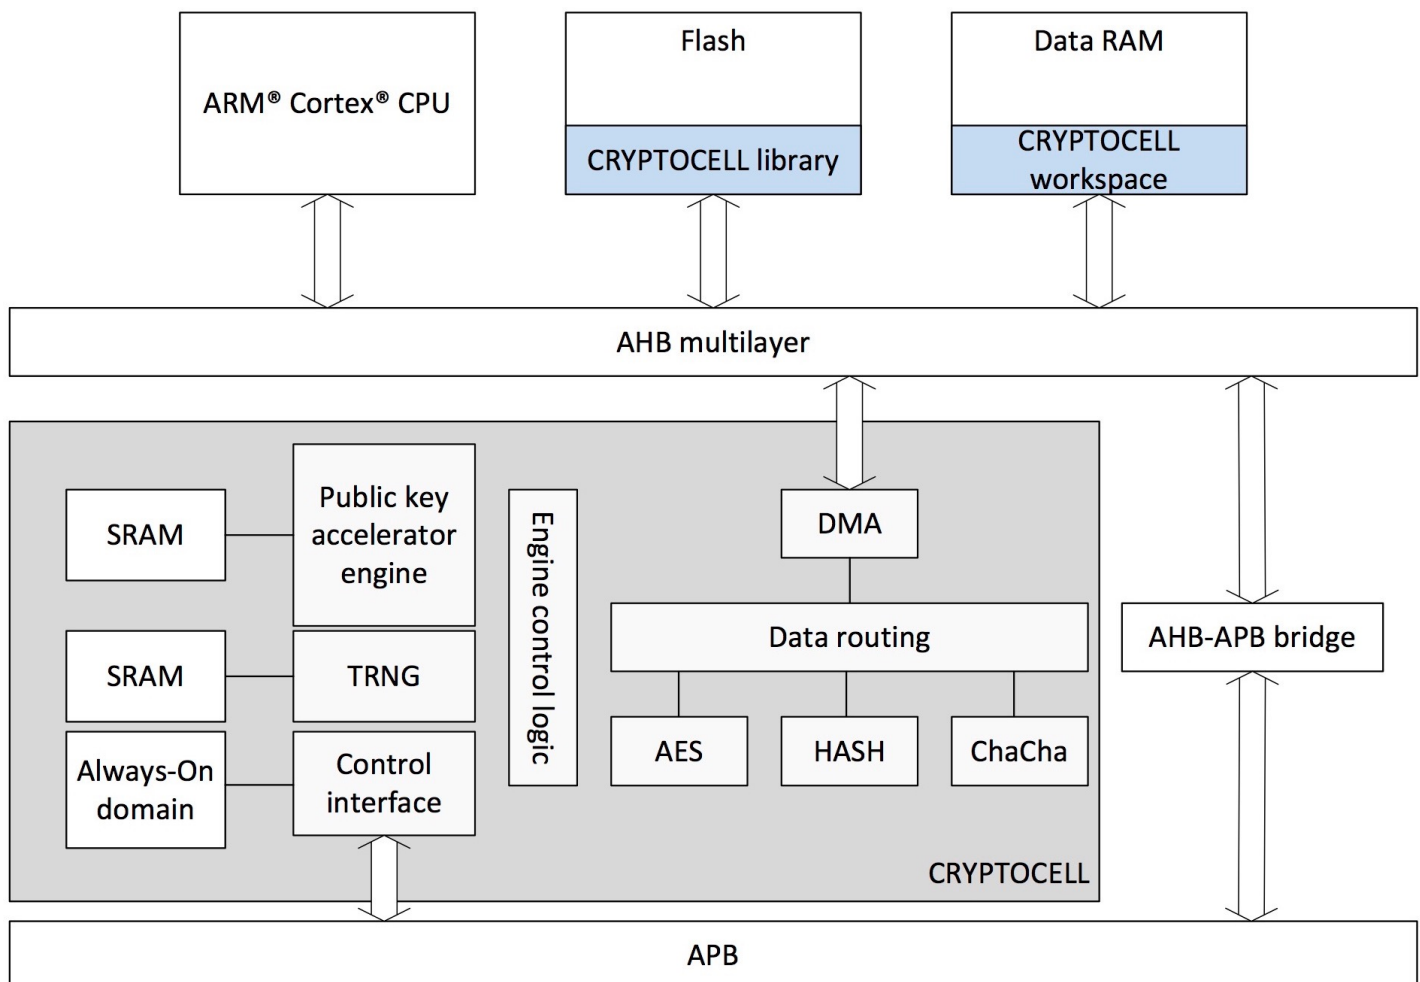

The 32 bit ARM Cortex M4F MCU with hardware supports for DSP instructions and floating point operations, code density and execution speed are higher than other Cortex M MCU. The Programmable Peripheral Interconnect (PPI) system provides a 20-channel bus for direct and autonomous system peripheral communication without CPU intervention. This brings predictable latency times for peripheral to peripheral interaction and power saving benefits associated with leaving CPU idle. The device has 2 global power modes ON/OFF, but all system blocks and peripherals have individual power management control which allows for an automatic switching RUN/IDLE for system blocks based only on those required/not required to achieve particular tasks.

The radio supports Bluetooth low energy and ANT. Output power is scalable from a maximum of +8dBm down to -20 dBm in 4dB steps. Sensitivity is increased to -96 dBm to -89 dBm, depending on data rate. Sensitivity for BLE is -96 dBm, and -92.5 dBm for ANT.

The NFC block supports NFC-A tags with proximity detection and Wake-on-field from low power mode. The NFC enables Out-Of-Band (OOB) Bluetooth pairing of devices and thus greatly simplifying deployment.

## ARM Trustzone CryptoCell 310

ARM® TrustZone® CryptoCell-310 co-processor is a security subsystem which provides Root of Trust (RoT) and cryptographic services for a device. CryptoCell services are available to the application through a software library API, not a hardware register interface.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

---

The following cryptographic features are provided.

- FIPS-140-2 certified True Random Number Generator (TRNG)
- RSA asymmetric encryption
  - Up to 2048 bit key size
  - PKCS#1 v2.1/v1.5
  - Optional CRT support
- Elliptic curve cryptography (ECC)
  - NIST FIPS 186-4 recommended curves using pseudo-random parameters, up to 521 bits:
    - Prime field: P-192, P-224, P-256, P-384, P-521
  - SEC 2 recommended curves using pseudo-random parameters, up to 521 bits:
    - Prime field: P-160, P-192, P-224, P-256, P-384, P-521
  - Koblitz curves using fixed parameters, up to 256 bits:
    - Prime field: P-160, P-192, P-224, P-256
  - Edwards/Montgomery curves:
    - Ed25519, Curve 25519
  - ECDH/ECDSA support
- Secure remote password protocol (SRP)
  - Up to 3072 bit operations
- Hashing functions
  - SHA-1, SHA-2 up to 256 bit size
  - keyed-hash message authentication code (HMAC)
- AES symmetric encryption
  - General purpose AES engine (encrypt/decrypt, sign/verify)
  - 128 bit key size
  - Supported encryption modes: ECB, CBC, CMAC/CBC-MAC, CTR, CCM/CCM\*.
- ChaCha20/Poly1305 symmetric encryption
  - Supported keyed size: 128 and 256 bits
  - Authenticated encryption with associated data (AEAD) mode

## Mounting BC840 and BC840M on the Host PCB

The following figure shows recommended mounting of BC840 and BC840M module on the host PCB.

- For the best Bluetooth range performance, the antenna area of BC840M module shall extend 5.5 mm outside the edge of host PCB board, or 5.5 mm outside the edge of a ground plane.
- For the best Bluetooth range performance, the antenna area of BC840 module shall extend 2.5 mm outside the edge of host PCB board, or 2.5 mm outside the edge of a ground plane.
- The next choice is to place BC840M on a corner of host PCB, the antenna area shall extend 5.5 mm from the edge of ground plane. Ground plane shall be at least 5 mm from the edge of the antenna area of module.
- The next choice is to place BC840 on a corner of host PCB, the antenna area shall extend 2.5 mm from the edge of ground plane. Ground plane shall be at least 5 mm from the edge of the antenna area of module.
- We don't recommend mounting BC840 module in the middle of a host PCB.

For the best Bluetooth range performance, keep all external metal at least 30mm from the antenna area.

## Host Board Layout

Library components for some PCB layout software are available. Or, it can be extracted from EV-BC840 evaluation board Gerber files. Gerber files can be downloaded from:

<http://www.fanstel.com/download-document/>.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

### 4. Bluetooth Range Measurements

Bluetooth range measurement hex codes can be downloaded from **Bluetooth Range Measurements** section of this webpage.

<http://www.fanstel.com/download-document/>

Description of measurement site, measurement methods, and range raw data are available at:

<https://www.fanstel.com/testreport/>

### Measurement Results

Bluetooth ranges are measured for antennas at two heights.

- 1.52 meters or 5 feet, the typical height of thermostat in the USA.
- Low Multiple Path Interference (LMPI) or 60% Fresnel zone clearance.

| Data rate/Antenna height, meters        | BC840 | BC840M | BC840E-ANT060* | BC840E-ANT020 |
|---|-------|--------|----------------|---------------|
| 1Mbps/1.52 meters, between modules      | 4     | 135    | 850            |               |
| 125Kbps/1.52 meters, between modules    | 8     |        | 1400           |               |
| 1Mbps/LMPI, between modules             |       |        | 1150           |               |
| 125Kbps/LMPI, between modules           |       | 400    | 3400           |               |
| 1Mbps/1.52 meters with an Android phone | 10    |        |                |               |

\* Because of availability of nRF52840 CKA SoC, Bluetooth range is measured from BC840E-ANT060 to BT840E-ANT060. Ranges will be re-measured between two BC840Es when additional SoCs are received.

### Deployment Recommendations

Sizes of modules of BC840 Series are similar. Measured ranges are from 4 meters to 1150 meters at 1Mbps. Different applications are targeted.

- To have the best Bluetooth data reception, direct line of sight between 2 devices should be away from ground or wall.
- BC840 is an ultra short range module for wearable applications.
- With larger PCB trace antenna, BC840M range is 400 meters at 125 Kbps. It can be used in a wide range of applications, wearable, home automation, beacon, medical devices etc..
- Peak TX for BC840E with ANT060 is 15.38 dBm and range is measured at 3400 meters at 125 Kbps. It is an ideal module for long range, battery powered applications.
- If one device must be installed closer to ground or a wall, install other devices far away from a wall or ground.
- Indoor condition is different for different building. We suggest testing Bluetooth data reception in the building with the worst case condition.
- B840 Series modules have compatible soldering pad footprint. Bluetooth range can be upgraded by replacing module. No hardware change to the host board is required if your enclosure can accommodate the longer module.

## 5. BC840 Evaluation Board

An evaluation board consists of the followings:

- Mini USB cable
- Evaluation board
- 10-conductor cable for connection to Nordic nRF52 DK (DK is not included)

## Nordic Development Tools

A Nordic nRF52840 DK is recommended for programming this evaluation board. Nordic development tools can be downloaded from:

<https://www.nordicsemi.com/eng/Products/nRF52840>

Many application examples can be downloaded from Nordic website.

Some firmware, Android OS, and iOS app codes can be downloaded from **Bluetooth 5 Codes** section of this Fanstel webpage.

<http://www.fanstel.com/download-document/>

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

---

**BT840** firmware can be used in all nRF52840 modules, e.g., BT840, BT840F, BT840E, BC840, and BC840M.

### Android OS Apps

The following Android OS apps are available for download from Google Play Store:

**BlueNor nrf5x**: to use with Bluetooth 5 stacks, AT commands, or Slave firmware. Master firmware does not connect to a smartphone. Source codes can be downloaded from <http://www.fanstel.com/download-document/>

**BlueNor Mesh**: to use with BlueNor mesh firmware to send command to any node in a mesh. Node number is displayed when acknowledgement is received. Source codes will be uploaded to Fanstel website when supporting Bluetooth 5.

### iOS Apps

The following iOS apps can be downloaded from Apple APP Store.

**BlueNor Mesh**: to use with BlueNor mesh firmware to send command to any node in a mesh. Node number is displayed when acknowledgement is received.

**BlueNor nrf5x** firmware, apps, and source codes will be uploaded when ready.

## **BC840/M/E, Compact BLE 5, Thread, Zigbee Modules**

Evaluation board can be used as a reference design for using modules..

### **Suggestion for Battery Power Application**

Standby current consumption is important for battery-powered product. We suggest adding a 32.768 kHz crystal and 2 capacitors on host board. The 32MHz main clock won't be active at idle state to save power.

Two inductors required for on-board DC to DC converter are inside BC840 and BC840M. You can enable DCDC converter to have lower power consumption.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

---

### 6. Production

#### Preloaded Firmware

Production testing codes are not erased before shipping from factory. To load your firmware, please erase the entire chip and re-program using instruction below.

```
//program BT840 Bootloader+Softdevice+Application hex
```

```
nrfjprog -f NRF52 --program BT840_AT_3in1PC181113.hex --chiperase --reset
```

```
//The file BT840_AT_3in1PC181113.hex = softdevice S140v6.1.1+BT840_AT_UARTwithout32K+bootloader
```

#### AT Command Codes

AT command codes are used for production testing. Up to date codes can be downloaded from:

<https://www.fanstel.com/download-document/>

You can erase and reprogram with your codes. Or, use AT command codes as preloaded.

If you need a special version of codes, programming services are available with MOQ and programming charges.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

### Soldering Temperature-Time Profile for Re-Flow Soldering

Maximum number of cycles for re-flow is 2. No opposite side re-flow is allowed due to module weight.

### Cautions, Design Notes, and Installation Notes

Failure to follow the guidelines set forth in this document may result in degrading of the product's functions and damage to the product.

#### Design Notes

- (1) Follow the conditions written in this specification, especially the control signals of this module.
- (2) The supply voltage has to be free of AC ripple voltage (for example from a battery or a low noise regulator output). For noisy supply voltages, provide a decoupling circuit (for example a ferrite in series connection and a bypass capacitor to ground of at least 47uF directly at the module).
- (3) This product should not be mechanically stressed when installed.
- (4) Keep this product away from heat. Heat is the major cause of decreasing the life of these products.
- (5) Avoid assembly and use of the target equipment in conditions where the products' temperature may exceed the maximum tolerance.
- (6) The supply voltage should not be exceedingly high or reversed. It should not carry noise and/or spikes.
- (7) this product away from other high frequency circuits.

#### Notes on Antenna and PCB Layout

- (1) Don't use a module with internal antenna inside a metal case.
- (2) For PCB layout:

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

---

- Avoid running any signal line below module whenever possible,
- No ground plane below antenna,
- If possible, cut-off the portion of main board PCB below antenna.

### Installation Notes

- (1) Reflow soldering is possible twice based on the time-temperature profile in this data sheets. Set up the temperature at the soldering portion of this product according to this reflow profile.
- (2) Carefully position the products so that their heat will not burn into printed circuit boards or affect the other components that are susceptible to heat.
- (3) Carefully locate these products so that their temperatures will not increase due to the effects of heat generated by neighboring components.
- (4) If a vinyl-covered wire comes into contact with the products, then the cover will melt and generate toxic gas, damaging the insulation. Never allow contact between the cover and these products to occur.
- (5) This product should not be mechanically stressed or vibrated when reflowed.
- (6) If you want to repair your board by hand soldering, please keep the conditions of this chapter.
- (7) Do not wash this product.
- (8) Refer to the recommended pattern when designing a board.
- (9) Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the unit.
- (10) For more details on LGA (Land Grid Array) soldering processes refer to the application note.

### Usage Condition Notes

- (1) Take measures to protect the unit against static electricity. If pulses or other transient loads (a large load applied in a short time) are applied to the products, check and evaluate their operation before assembly on the final products.
- (2) Do not use dropped products.
- (3) Do not touch, damage or soil the pins.
- (4) Follow the recommended condition ratings about the power supply applied to this product.
- (5) Electrode peeling strength: Do not add pressure of more than 4.9N when soldered on PCB
- (6) Pressing on parts of the metal cover or fastening objects to the metal cover will cause damage.
- (7) These products are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information and communication equipment.

### Storage Notes

- (1) The module should not be stressed mechanically during storage.

## BC840/M/E, Compact BLE 5, Thread, Zigbee Modules

- (2) Do not store these products in the following conditions or the performance characteristics of the product, such as RF performance will be adversely affected:
- Storage in salty air or in an environment with a high concentration of corrosive gas.
  - Storage in direct sunlight
  - Storage in an environment where the temperature may be outside the range specified.
  - Storage of the products for more than one year after the date of delivery storage period.
- (3) Keep this product away from water, poisonous gas and corrosive gas.
- (4) This product should not be stressed or shocked when transported.
- (5) Follow the specification when stacking packed crates (max. 10).

### **Safety Conditions**

These specifications are intended to preserve the quality assurance of products and individual components. Before use, check and evaluate the operation when mounted on your products. Abide by these specifications, without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, then provide the following failsafe functions, as a minimum.

- (1) Ensure the safety of the whole system by installing a protection circuit and a protection device.
- (2) Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a dual fault causing an unsafe status.

### **Other Cautions**

- (1) This specification sheet is copyrighted. Reproduction of this data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices.
- (2) Do not use the products for other purposes than those listed.
- (3) Be sure to provide an appropriate failsafe function on your product to prevent an additional damage that may be caused by the abnormal function or the failure of the product.
- (4) This product has been manufactured without any ozone chemical controlled under the Montreal Protocol.
- (5) These products are not intended for other uses, other than under the special conditions shown below. Before using these products under such special conditions, check their performance and reliability under the said special conditions carefully to determine whether or not they can be used in such a manner.
- In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash.
  - In direct sunlight, outdoors, or in a dusty environment
  - In an environment where condensation occurs.

## **BC840/M/E, Compact BLE 5, Thread, Zigbee Modules**

---

- In an environment with a high concentration of harmful gas.
- (6) If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these products with new products because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.
- (7) When you have any question or uncertainty, contact Fanstel.

### **Packaging**

Production modules are delivered in reel, 1000 modules in each reel.

### **FCC LABEL**

The Original Equipment Manufacturer (OEM) must ensure that the OEM modular transmitter must be labeled with its own FCC ID number. This includes a clearly visible label on the outside of the final product enclosure that displays the contents shown below. If the FCC ID is not visible when the equipment is installed inside another device, then the outside of the device into which the equipment is installed must also display a label referring to the enclosed equipment

The end product with this module may subject to perform FCC part 15 unintentional emission test requirement and be properly authorized.

This device is intended for OEM integrator only.

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
