

LTV-200/205/206/207/208

Optocouplers, Phototransistor Output, Dual Channel,
SOP8 Package

Rev.A March2011

Description

The LTV-200/205/206/207/208 are consist of a high efficient Gallium Arsenide Infrared LED and a Silicon NPN phototransistor. This design provides excellent isolation between the input and output sides of the Optocoupler.

The LTV-200/205/206/207/208 come in a standard SOP8 small outline package for surface mounting which makes it ideally suited for high density application with limited space.

A Specific CTR range allows a narrow tolerance in the electrical design of the adjacent circuits.
