

## Low Cost Single Trip Point Temperature Sensor

### Features:

- Temperature Set Point Easily Programs with a Single External Resistor
- Operates with 2.7V Power Supply (TC624)
- TO-220 Package for Direct Mounting to Heatsink (TC622XAT) or Standard 8-Pin PDIP and SOIC

### Applications:

- Power Supply Over-Temperature Detection
- Consumer Electronics
- Fire/Heat Detection
- UPSs, Amplifiers, Motors
- CPU Thermal Management in PCs

### General Description:

The TC622 and TC624 are programmable solid-state temperature sensors designed to replace mechanical switches in sensing and control applications. Both devices integrate the temperature sensor with a voltage reference and all required detector circuitry. The desired temperature set point is set by the user with a single external resistor.

Ambient temperature is sensed and compared to the programmed set point. The  $\overline{\text{OUT}}$  and  $\overline{\text{OUT}}$  outputs are driven to their active state when the measured temperature exceeds the programmed set point.

The TC622 has a power supply voltage range of 4.5V to 18.0V while the TC624 operates over a power supply range of 2.7V to 4.5V. Both devices are usable over a temperature range of -40°C to +125°C (TC622VXX, TC624VXX). Both devices feature low supply current making them suitable for portable applications.

Eight-pin through-hole and surface mount packages are available. The TC622 is also offered in a 5-pin TO-220 package.

The TC622 and TC624 are single point temperature detectors ideal for use in a wide variety of applications.

### Device Selection Table

| Part Number | Voltage Operation | Package      | Ambient Temperature |
|-------------|-------------------|--------------|---------------------|
| TC622COA    | 4.5V to 18V       | 8-Pin SOIC   | 0°C to +70°C        |
| TC622CPA    | 4.5V to 18V       | 8-Pin PDIP   | 0°C to +70°C        |
| TC622EAT    | 4.5V to 18V       | 5-Pin TO-220 | -40°C to +85°C      |
| TC622EOA    | 4.5V to 18V       | 8-Pin SOIC   | -40°C to +85°C      |
| TC622EPA    | 4.5V to 18V       | 8-Pin PDIP   | -40°C to +85°C      |
| TC622VAT    | 4.5V to 18V       | 5-Pin TO-220 | -40°C to +125°C     |
| TC622VOA    | 4.5V to 18V       | 8-Pin SOIC   | -40°C to +125°C     |
| TC622VPA    | 4.5V to 18V       | 8-Pin PDIP   | -40°C to +125°C     |
| TC624COA    | 2.7V to 4.5V      | 8-Pin SOIC   | 0°C to +70°C        |
| TC624CPA    | 2.7V to 4.5V      | 8-Pin PDIP   | 0°C to +70°C        |
| TC624EOA    | 2.7V to 4.5V      | 8-Pin SOIC   | -40°C to +85°C      |
| TC624EPA    | 2.7V to 4.5V      | 8-Pin PDIP   | -40°C to +85°C      |
| TC624VOA    | 2.7V to 4.5V      | 8-Pin SOIC   | -40°C to +125°C     |
| TC624VPA    | 2.7V to 4.5V      | 8-Pin PDIP   | -40°C to +125°C     |

Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

| 5                          | T <sub>SET</sub>        | Temperature set point. Connect an external 1% resistor from T <sub>SET</sub> to V <sub>CC</sub> to set trip point. |

## 3.0 DETAILED DESCRIPTION

### 3.1 Trip Point Programming

When the temperature of the device exceeds the programmed temperature trip point,  $T_{SET}$ , the OUT and  $\overline{OUT}$  outputs are driven into their active states. The desired trip point temperature is programmed with a single external resistor connected between the  $T_{SET}$  input and  $V_{CC}$ . The relationship between the resistor value and the trip point temperature is given by Equation 3-1.

#### EQUATION 3-1:

$$R_{TRIP} = 0.5997 \times T^{2.1312}$$

Where:

$R_{TRIP}$  = Programming resistor value in Ohms  
 $T$  = Desired trip temperature in degrees Kelvin.

For example, as shown in Figure 3-1, to program the device to trip at 50°C, the programming resistor is:

$$R_{TRIP} = 0.5997 \times ((50 + 273.15)^{2.1312}) = 133.65 \text{ k}\Omega$$

**FIGURE 3-1:** Programming Resistor Values vs. Temperature

### 3.2 Hysteresis

To prevent output “chattering” at the trip point temperature, the temperature detector in the TC622/TC624 has 2°C hysteresis (see Figure 3-2). The outputs are driven active when the temperature crosses the set point determined by the external resistor. As temperature declines below the set point, the hysteresis action will hold the outputs true until the temperature drops 2°C below the threshold.

**FIGURE 3-2:** TC622/TC624 Hysteresis

# TC622/TC624

## 4.0 TYPICAL APPLICATIONS

### 4.1 Over-Temperature Shutdown

The TC622 can be used to create a simple over-temperature shutdown circuit. In this circuit, temperature is sensed within the system enclosure (internal system ambient) or at the heatsink itself. When measured temperature exceeds a preset limit, a fault is indicated and the system shuts down.

Figure 4-1 illustrates an over-temperature shutdown circuit using the TC622 sensor in a single TO-220 package, allowing direct attachment to the heatsink surface. As shown, the TC622 outputs are driven active when the heatsink temperature equals the trip point temperature set by  $R_{TRIP}$ . When this happens, the crowbar circuit is activated, causing the supply output to fold back to zero. The TC622 outputs remain active until the heatsink temperature falls a minimum of 2°C (built-in hysteresis) below the trip point temperature, at which time the device again allows normal supply operation.

**FIGURE 4-1:** TC622 Power Supply Over-Temperature Shutdown

### 4.2 Cooling and Heating Applications

The TC622/TC624 can be used to control a DC fan as shown in Figure 4-2. The fan turns on when the sensed temperature rises above  $T_{SET}$  and remains on until the temperature falls below  $T_{SET} - 2^{\circ}\text{C}$ .

Figure 4-3 shows the TC622 acting as a heater thermostat. Circuit operation is identical to that of the cooling fan application.

**FIGURE 4-3:** TC622 As A Heater Thermostat

5.0 PACKAGING INFORMATION

5.1 Package Marking Information

Package marking data not available at this time.

5.2 Taping Form

## 5.3 Package Dimensions

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

### 8-Pin Plastic DIP

Dimensions: inches (mm)

## 5.4 Package Dimensions (Continued)

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

### 8-Pin SOIC

Dimensions: inches (mm)

**Note:** For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

## 5-Pin TO-220

Dimensions: inches (mm)

## 6.0 REVISION HISTORY

### Revision D (December 2012)

Added a note to each package outline drawing.

NOTES:

## SALES AND SUPPORT

### **Data Sheets**

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Worldwide Site ([www.microchip.com](http://www.microchip.com))

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

### **New Customer Notification System**

Register on our web site ([www.microchip.com/cn](http://www.microchip.com/cn)) to receive the most current information on our products.

---

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**= ISO/TS 16949 =**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
