1SP0335x2xx-65
Preliminary Data Sheet

Compact, high-performance, plug-and-play single-channel IGBT driver based on SCALE™-2 technology for individual and parallel-connected modules in 2-level, 3-level and multilevel converter topologies

Abstract

The SCALE™-2 plug-and-play driver 1SP0335x2xx-65 is a compact single-channel intelligent gate driver designed for 6500V 130x140mm and 190x140mm IGBT modules. The master driver 1SP0335x2Mx-65 features a fiber-optic interface. It can be used as stand-alone driver or in conjunction with up to three 1SP0335D2Sx-65 slaves to drive up to four parallel-connected IGBT modules.

The DC/DC power supply must be purchased as a separate unit (one per master driver).

The turn-on and turn-off gate resistors as well as the auxiliary gate capacitor are not assembled in order to provide maximum flexibility. They must be assembled by the user before start of operation. Please refer to the paragraph on "Gate Resistor Assembly" for the recommended values.

For drivers adapted to other types of high-power and high-voltage IGBT modules, refer to:

www.IGBT-Driver.com/go/plug-and-play

Features

- ✔ Plug-and-play solution
- ✔ Allows parallel connection of IGBT modules
- ✔ For 2-level, 3-level and multilevel topologies
- ✔ Fiber-optic links (master)
- ✔ Built-in interface to 1SP0335D2Sx (slave)
- ✔ Duty cycle 0...100%
- ✔ Dynamic Advanced Active Clamping DA^{2}C
- ✔ Dynamic IGBT short-circuit protection
- ✔ Monitoring of supply voltage
- ✔ Monitoring of gate voltage
- ✔ Extremely reliable; long service life
- ✔ Shortens application development time
- ✔ Suitable for 6500V 130x140mm and 190x140mm IGBT modules

Applications

- ✔ Traction
- ✔ Railroad power supplies
- ✔ Light rail vehicles
- ✔ HVDC
- ✔ Flexible AC transmission systems (FACTS)
- ✔ Medium-voltage converters
- ✔ Industrial drives
- ✔ Wind-power converters
- ✔ Medical applications
- ✔ Research
- ✔ And many others

Preliminary Data Sheet

Safety Notice!

The data contained in this data sheet is intended exclusively for technically trained staff. Handling all high-voltage equipment involves risk to life. Strict compliance with the respective safety regulations is mandatory!

Any handling of electronic devices is subject to the general specifications for protecting electrostatic-sensitive devices according to international standard IEC 60747-1, Chapter IX or European standard EN 100015 (i.e. the workplace, tools, etc. must comply with these standards). Otherwise, this product may be damaged.

Important Product Documentation

This data sheet contains only product-specific data. For a detailed description, must-read application notes and common data that apply to the whole series, please refer to the "Description & Application Manual for 1SP0335 SCALE-2 IGBT Drivers" on www.IGBT-Driver.com/go/1SP0335.

The gate resistors as well as the auxiliary gate capacitor on this gate driver are not assembled in order to provide maximum flexibility. For the values required for specific IGBT modules, refer to the paragraph on "Gate Resistor Assembly". Use of gate resistors and gate auxiliary capacitors other than those specified may result in failure.

Mechanical Dimensions

Dimensions: See the relevant "Description and Application Manual"

Mounting principle: Connected to IGBT module with screws

Fiber-Optic Interfaces (1SP0335x2Mx)

Interface	Remarks	Part type #

Preliminary Data Sheet

Timing Characteristics	Remarks	Min	Typ	Max	Unit
Transmission delay of fault state	Note 22		90		ns
Delay to clear fault state	After IGBT short circuit (Note 23)		9		μs
	After gate-monitoring fault (Notes 23, 27)		1		μs
Acknowledge delay time	Note 24		250		ns
Acknowledge pulse width	On host side	400	700	1050	ns

Gate Output	Remarks	Min	Typ	Max	Unit
Turn-on gate resistor $R_{g(on)}$	Note 25		not assembled		Ω
Turn-off gate resistor $R_{g(off)}$	Note 25		not assembled		Ω
Auxiliary gate capacitor C_{ge}	Note 25		not assembled		nF
Gate voltage at turn-on	Note 26		15		V
Gate-voltage at turn-off	Note 26		-10		V

Footnotes to the Key Data

1) The transceivers required on the host controller side are not supplied with the gate driver. It is recommended to use the same types as used in the gate driver. For product information refer to www.IGBT-Driver.com/go/fiberoptics

2) The recommended transmitter current at the host controller is 20mA. A higher current may increase jitter or delay at turn-off.

3) The typical transmitter current at the gate driver is 18mA. In case of supply undervoltage, the minimum transmitter current at the gate driver is 12mA: this is suitable for adequate plastic optical fibers with a length of more than 10 meters.

4) This refers to the manufacturer ordering number, see www.igbt-driver.com/go/ext_erni. The customer-side connector as well as cables with different lengths can be supplied by CONCEPT. Refer to the "Description & Application Manual for 1SP0335 SCALE-2 IGBT Drivers" for more information.

5) This refers to the manufacturer ordering number, see www.igbt-driver.com/go/ext_erni. These connectors are to be used to connect 1SP0335x2Mx (master) or 1SP0335D2Sx (slave) to 1SP0335D2Sx (slave) if parallel connection of IGBT modules is required. Cables with different lengths can be supplied by CONCEPT. Refer to the "Description & Application Manual for 1SP0335 SCALE-2 IGBT Drivers" for more information.

6) If the specified value is exceeded, this indicates a driver overload. It should be noted that the driver is not protected against overload.

7) The given power can only be fully exploited without slaves 1SP0335D2Sx (no parallel connection of IGBT modules). If the specified value is exceeded, this indicates a driver overload. It should be noted that the driver is not protected against overload. From 70°C to 85°C, the maximum permissible output power can be linearly interpolated from the given data.

8) The given power can be fully exploited with slaves 1SP0335D2Sx (parallel connection of IGBT modules). If the specified value is exceeded, this indicates a driver overload. It should be noted that the driver is not protected against overload. From 70°C to 85°C, the maximum permissible output power can be linearly interpolated from the given data.

9) The gate current is limited by the gate resistors located on the driver.

10) This limit is due to active clamping under switching conditions. Refer to the "Description & Application Manual for 1SP0335 SCALE-2 IGBT Drivers".

11) Due to the Dynamic Active Advanced Clamping Function (DA^{2}C) implemented on the driver, the DC-link voltage can be increased in the off-state condition (e.g. after emergency shut-down). This value is only valid when the IGBTs are in the off state (not switching). The time during which the voltage can be applied should be limited to short periods (< 60 seconds). Refer to the "Description & Application Manual for 1SP0335 SCALE-2 IGBT Drivers".

Preliminary Data Sheet

12) The maximum dynamic voltage between auxiliary emitters of parallel-connected drivers due to asymmetrical operation at turn-on and turn-off must be limited to the given value.

13) Maximum allowed rate of change of auxiliary emitter voltage of parallel connected drivers. This specification guarantees that the drive information will be transferred reliably even with high rate of change of auxiliary emitter voltages (asymmetrical operation).

14) Dynamic voltages between auxiliary emitters of parallel connected drivers at turn-on and turn-off lead to equalizing currents over the X2 or X3 bus. The peak and RMS values of the resulting current must be limited to the given value.

15) Undervoltage monitoring of the secondary-side supply voltage (Viso to Vee and Vee to COM which correspond with the approximate turn-on and turn-off gate-emitter voltages). If the corresponding voltage drops below this limit on 1SP0335x2Mx (masters), all paralleled IGBTs (master and slaves) are switched off and a fault is transmitted to the status output. If the corresponding voltage drops below this limit on 1SP0335D2Sx (slaves), the corresponding IGBT is switched off. If the IGBT was turned on, a fault will be generated by the gate-monitoring function on the master which will turn off all paralleled IGBT after the corresponding delay.

16) The mean value $V_{GE,mean}$ of all gate voltages (master and all slaves) is filtered and compared to the given values at turn-on and turn-off. If the specified values are exceeded ($V_{GE,mean} < V_{GE,on,min}$ at turn-on resp. $V_{GE,mean} > V_{GE,off,max}$ at turn-off) after the given filter delay, the driver turns off all parallel-connected IGBTs and a fault is transmitted to the status output.

17) A dynamic Vce protection is implemented on the driver. The maximum allowed Vce voltage at turn-on is dynamically adjusted in order to better fit to the IGBT characteristics at turn-on. At the end of the turn-on process the given static value applies.

18) The resulting pulse width of the direct output of the gate drive unit for short-circuit type I (excluding the delay of the gate resistors) is the sum of the response time plus the delay to IGBT turn-off.

19) The turn-off event of the IGBT is delayed by the specified time after the response time.

20) Including the delay of the external fiber-optic links (cable length: 1m). Measured from the transition of the turn-on or turn-off command at the optical transmitter on the host controller side to the direct output of the gate drive unit (excluding the delay of the gate resistors).

21) Output rise and fall times are measured between 10% and 90% of the nominal output swing. The values are given for the driver side of the gate resistors with 2Ω/1uF load. The time constant of the output load in conjunction with the present gate resistors leads to an additional delay at their load side.

22) Delay of external fiber-optic links. Measured from the driver secondary side (ASIC output) to the optical receiver on the host controller.

23) Measured on the host side. The fault status on the secondary side is automatically reset after the specified time.

24) Including the delay of the external fiber-optic links. Measured from the transition of the turn-on or turn-off command at the optical transmitter on the host controller side to the transition of the acknowledge signal at the optical receiver on the host controller side.

25) The gate resistors and the auxiliary gate capacitor are not assembled on this IGBT gate driver. They must be assembled by the user according to the paragraph on "Gate Resistor Assembly".

26) The driver supply voltage VDC is split into two distinct voltages on the driver. The first one is the turn-on voltage which is regulated at about 15V. The difference between VDC and the turn-on voltage is the turn-off voltage which is not regulated and mainly dependent on the driver input voltage VDC.

27) The fault status is set as long as the gate monitoring fault is present. The given value applies if the driver goes from the "off state" to the "on state" and the gate-emitter voltage of one or more parallel connected drivers does not turn on. If the driver goes from the "on state" to the "off state" and the gate-emitter voltage of one or more parallel connected drivers does not turn off, the fault status is applied as long as the gate monitoring fault is present.

28) The maximum switching frequency is not defined, as it depends on the IGBT module used. Please consult the corresponding driver data sheet for more information.

Preliminary Data Sheet

Gate Resistor and Auxiliary Gate Capacitor Assembly

The turn-on and turn-off gate resistors as well as the auxiliary gate capacitor of 1SP0335x2xx drivers are adapted to their respective IGBT modules.

Recommended gate resistors (R168, R169, R178 and R179): PR02 / 2W / 5% from Vishay.
Recommended auxiliary gate capacitor (C105): 1206 / X7R / 25V / 5%

The following versions exist:

6500V IGBT Type	R178/ R179	R168/ R169	Resulting Rg,on	Resulting Rg,off	C105
FZ200R65KF2	27Ω	180Ω	13.5Ω	90Ω	22nF
FZ250R65KE3	6.2Ω	43Ω	3.1Ω	21.5Ω	not assembled
FZ400R65KF2	13Ω	91Ω	6.5Ω	45.5Ω	47nF
CM400HG-130H	39Ω	100Ω	19.5Ω	50Ω	not assembled
5SNA0500J650300	8.2Ω	47Ω	4.1Ω	23.5Ω	150nF
FZ500R65KE3	3Ω	20Ω	1.5Ω	10Ω	not assembled
MBN500H65E2	24Ω	24Ω	12Ω	12Ω	not assembled
5SNA0600G650100	8.2Ω	8.2Ω	4.1Ω	4.1Ω	not assembled
FZ600R65KE3	2.7Ω	18Ω	1.35Ω	9Ω	not assembled
5SNA0750G650300	5.6Ω	30Ω	2.8Ω	15Ω	220nF
MBN750H65E2	18Ω	18Ω	9Ω	9Ω	not assembled
FZ750R65KE3	2Ω	15Ω	1Ω	7.5Ω	not assembled
CM750HG-130R	8.2Ω	68Ω	4.1Ω	34Ω	not assembled

For the component position, refer to Figs. 1 and 2.

Preliminary Data Sheet

Assembly Drawing
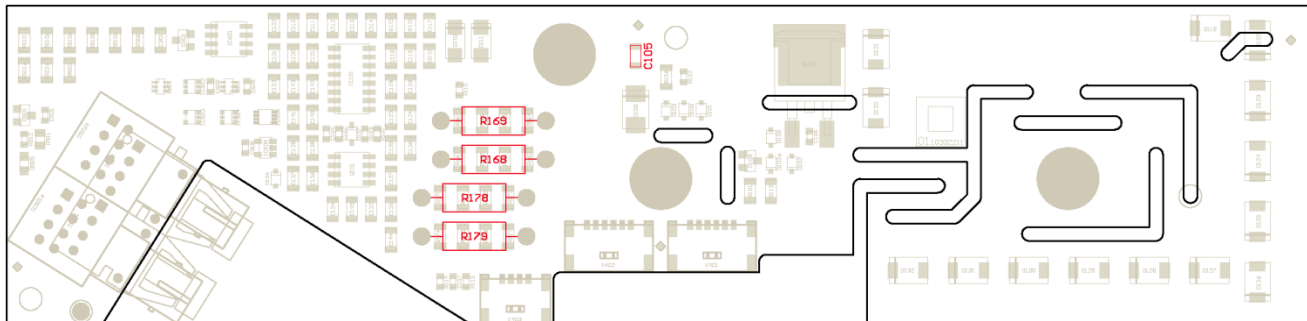

Fig. 1: Assembly drawing of 1SP0335x2Mx with highlighted gate resistors
Fig. 2: Assembly drawing of 1SP0335D2Sx with highlighted gate resistors

Note that the wires of the gate resistors should not project more than 1.6mm after soldering (excess length at bottom side). Furthermore, a minimum distance of 1mm must be maintained between the gate resistor body and the PCB.

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное   производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
