**3.3V, 3.2Gbps CML Limiting Post Amplifier  
with Wide Loss-of-Signal Detection Range**

---

**General Description**

The SY88303BL low-power limiting post amplifiers are designed for use in fiber-optic receivers. These devices connect to typical transimpedance amplifiers (TIAs). The linear signal output from TIAs can contain significant amounts of noise and may vary in amplitude over time. The SY88303BL quantizes these signals and output CML-level waveforms.

The SY88303BL operates from a single +3.3V power supply, over temperatures ranging from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . With their wide bandwidth and high gain, signals with data rates up to 3.2Gbps, and as small as  $10\text{mV}_{\text{PP}}$ , can be amplified to drive devices with CML/PECL inputs.

The device generates a loss-of-signal (LOS) open-collector TTL output. The LOS function is optimized to detect a wide input range, as shown in the typical operating characteristic curve on Page 6. A programmable loss-of-signal level-set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the sensitivity of the input amplitude detection.

LOS asserts high if the input amplitude falls below the threshold sets by  $\text{LOS}_{\text{LVL}}$  and de-asserts low otherwise. The enable bar input ( $\text{/EN}$ ) de-asserts the true output signal without removing the input signal. The LOS output can be fed back to the  $\text{/EN}$  input to maintain output stability under a loss-of-signal condition. Typically, 3.5dB LOS hysteresis is provided to prevent chattering.

Datasheet and support documentation can be found on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

**Features**

- Loss-of-signal detection circuit optimized to detect a wide input range
- Chatter-free Open-Collector TTL Loss-of-Signal (LOS) output
- Single 3.3V power supply
- 155Mbps to 3.2Gbps operation
- Low-noise CML data outputs
- Programmable LOS level set ( $\text{LOS}_{\text{LVL}}$ )
- Available in a tiny 10-pin EPAD-MSOP and 16-pin QFN package

**Applications**

- PON
- Gigabit Ethernet
- 1X and 2X Fibre Channel
- SONET/SDH: OC 3/12/24/48 – STM 1/4/8/16
- High-gain line driver and line receiver

**Markets**

- FTTX
- Optical transceivers
- Datacom/Telecom
- Low-gain TIA interface
- Long-reach FOM

### Typical Application

### Pin Configuration

10-Pin EPAD-MSOP (K10-2)

16-Pin QFN

### Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY88303BLEY	K10-2	Industrial	303B with Pb-Free bar line indicator	Matte-Sn Pb-free
SY88303BLEYTR <sup>(1)</sup>	K10-2	Industrial	303B with Pb-Free bar line indicator	Matte-Sn Pb-free
SY88303BLMG	QFN-16	Industrial	303B with Pb-Free bar line indicator	NiPdAu Pb-free

**Note:**

- 1. Tape and Reel.

## Pin Description

Pin Number (MSOP)	Pin Number (QFN)	Pin Name	Type	Pin Function
1	15	/EN	TTL Input: Default is low.	Enable bar: De-asserts true data output when High.
2	1	DIN	Data Input	True data input with 50Ω termination to V <sub>REF</sub> .
3	4	/DIN	Data Input	Complementary data input w50Ω termination to V <sub>REF</sub> .
4	6	VREF		Reference Voltage: Placing a capacitor here to V <sub>CC</sub> helps stabilize.
5	14	LOSLVL	Input	Loss-of-Signal Level Set: A resistor from this pin to V <sub>CC</sub> sets the threshold for the data input amplitude at which the LOS output will be asserted.
6 Exposed Pad	2, 3, 10, 11 Exposed Pad	GND	Ground	Device ground. Exposed pad must be connected to PCB ground plane.
7	7	LOS	Open Collector TTL Output	Loss-of-Signal: Asserts high when the data input amplitude falls below the threshold sets by LOS <sub>LVL</sub> . For proper operation, install an external 4.75kΩ pull-up resistor at this output.
8	9	/DOUT	CML Output	Complementary data output.
9	12	DOUT	CML Output	True data output.
10	5, 8, 13, 16	VCC	Power Supply	Positive power supply.

### Absolute Maximum Ratings<sup>(1)</sup>

Supply Voltage ( $V_{CC}$ ) ..... 0V to +4.0V  
 Input Voltage (DIN, DIN) ..... 0 to  $V_{CC}$   
 Output Current ( $I_{OUT}$ )  
     Continuous .....  $\pm 50$ mA  
     Surge .....  $\pm 100$ mA  
 /EN Voltage ..... 0 to  $V_{CC}$   
 $V_{REF}$  Current ..... -800 $\mu$ A to +500 $\mu$ A  
 LOS<sub>LVL</sub> Voltage .....  $V_{REF}$  to  $V_{CC}$   
 Lead Temperature (soldering, 20sec.) ..... 260°C  
 Storage Temperature ( $T_s$ ) ..... -65°C to +150°C

### Operating Ratings<sup>(2)</sup>

Supply Voltage ( $V_{CC}$ ) ..... +3.0V to +3.6V  
 Ambient Temperature ( $T_A$ ) ..... -40°C to +85°C  
 Junction Temperature ( $T_J$ ) ..... -40°C to +125°C  
 Junction Thermal Resistance<sup>(3)</sup>  
 EPAD-MSOP  
      $\theta_{JA}$  (Still-Air) ..... 38°C/W  
      $\Psi_{JB}$  ..... 22°C/W  
 QFN  
      $\theta_{JA}$  (Still-Air) ..... 61°C/W  
      $\Psi_{JB}$  ..... 38°C/W

### DC Electrical Characteristics

$V_{CC} = 3.0V$  to  $3.6V$ ;  $R_L = 50\Omega$  to  $V_{CC}$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ ; typical values at  $V_{CC} = 3.3V$ ,  $T_A = 25^\circ C$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$I_{CC}$	Power Supply Current	No output load		38	60	mA
$V_{LOSLVL}$	LOS <sub>LVL</sub> Voltage		$V_{REF}$		$V_{CC}$	V
$V_{OH}$	CML Output HIGH Voltage		$V_{CC}-0.020$	$V_{CC}-0.005$	$V_{CC}$	V
$V_{OL}$	CML Output LOW Voltage		$V_{CC}-0.475$	$V_{CC}-0.4$	$V_{CC}-0.350$	V
$V_{OFFSET}$	Differential Output Offset				$\pm 80$	mV
$V_{REF}$	Reference Voltage		$V_{CC}-1.48$	$V_{CC}-1.32$	$V_{CC}-1.16$	V
$Z_I$	Single-Ended Input Impedance		40	50	60	$\Omega$

### TTL DC Electrical Characteristics

$V_{CC} = 3.0V$  to  $3.6V$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	/EN Input HIGH Voltage		2.0			V
$V_{IL}$	/EN Input LOW Voltage				0.8	V
$I_{IH}$	/EN Input HIGH Current	$V_{IN} = 2.7V$ $V_{IN} = V_{CC}$			20 100	$\mu A$ $\mu A$
$I_{IL}$	/EN Input LOW Current	$V_{IN} = 0.5V$	-300			$\mu A$
$I_{OH}$	LOS Output Leakage	$V_{OH} = 3.6V$			100	$\mu A$
$V_{OL}$	LOS Output LOW Level	$I_{OL} = +4mA$			0.5	V

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Thermal performance assumes the use of a 4-layer PCB. Exposed pad must be soldered (or equivalent) to the device's most negative potential on the PCB.

## AC Electrical Characteristics

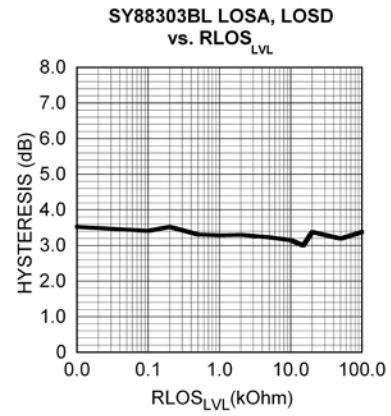

$V_{CC} = 3.0V$  to  $3.6V$ ;  $R_L = 50\Omega$  to  $V_{CC}$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ ; typical values at  $V_{CC} = 3.3V$ ,  $T_A = +25^\circ C$ .

### Notes:

- Amplifier in limiting mode. Input is a 200MHz, 100mV<sub>PP</sub> square wave.
- Deterministic jitter measured using 3.2Gbps K28.5 pattern,  $V_{ID} = 10mV_{PP}$ .
- Random jitter measured using 3.2Gbps K28.7 pattern,  $V_{ID} = 10mV_{PP}$ .
- This specification defines electrical hysteresis as  $20\log(LOS\ De-assert/LOS\ Assert)$ . The ratio between optical hysteresis and electrical hysteresis is found to vary between 1.5 and 2, depending upon the level of received optical power and ROSA characteristics. Based upon that ratio, the optical hysteresis corresponding to the electrical hysteresis range 2dB-6dB, shown in the AC characteristics table, will be 1dB-3dB Optical Hysteresis.
- See "Typical Operating Characteristics" for a graph showing how to choose a particular  $R_{LOS_{LVL}}$  for a particular LOS assert and its associated de-assert amplitude.

## Functional Characteristics

## Functional Block Diagram

## Detailed Description

The SY88303BL low-power limiting post amplifiers operate from a single +3.3V power supply, over temperatures from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Signals with data rates up to 3.2Gbps and as small as  $10\text{mV}_{\text{PP}}$  can be amplified. Figure 1 shows the allowed input voltage swing. The SY88303BL generates a LOS output allowing feedback to /EN for output stability.  $\text{LOS}_{\text{LVL}}$  sets the sensitivity of the input amplitude detection.

### Input Amplifier Buffer

Figure 2 shows a simplified schematic of the input stage. The high-sensitivity of the input amplifier allows signals as small as  $10\text{mV}_{\text{PP}}$  to be amplified. The input amplifier also allows input signals as large as  $1800\text{mV}_{\text{PP}}$ . Input signals below  $12\text{mV}_{\text{PP}}$  are linearly amplified with a typical 42dB differential voltage gain. Since it is a limiting amplifier, these devices output typically  $800\text{mV}_{\text{PP}}$  voltage-limited waveforms for input signals greater than  $12\text{mV}_{\text{PP}}$ . Applications requiring the SY88303BL to operate with strong signals should have the upstream TIA placed as close as possible to the devices' input pins. This ensures the best performance of the device.

### Output Buffer

The SY88303BL CML output buffers are designed to drive  $50\Omega$  lines. The output buffer requires appropriate termination for proper operation. An external  $50\Omega$  resistor to  $V_{\text{CC}}$  for each output pin provides this. Figure 3 shows a simplified schematic of the output stage.

### Loss-of-Signal

The SY88303BL generates a chatter-free LOS open-collector TTL output, as shown in Figure 4. LOS is used to determine that the input amplitude is large enough to be considered a valid input. LOS asserts high if the input amplitude falls below the threshold sets by  $\text{LOS}_{\text{LVL}}$  and de-asserts low otherwise. LOS can be fed back to the enable bar (/EN) input to maintain output stability under a loss-of-signal condition. /EN de-asserts the true output signal without removing the input signals.

### Loss-of-Signal Level Set

Programmable LOS level-set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the threshold of the input amplitude detection. Connecting an external resistor between  $V_{\text{CC}}$  and  $\text{LOS}_{\text{LVL}}$  set the voltage at  $\text{LOS}_{\text{LVL}}$ . This voltage ranges from  $V_{\text{CC}}$  to  $V_{\text{REF}}$ . The external resistor creates a voltage divider between  $V_{\text{CC}}$  and  $V_{\text{REF}}$ , as shown in Figure 5.

### Hysteresis

The SY88303BL typically provides 3.5dB LOS electrical hysteresis. By definition, a power ratio measured in dB is  $10\log(\text{power ratio})$ . Power is calculated as  $V_{\text{IN}}^2 / R$  for an electrical signal. Hence, the same ratio can be stated as  $20\log(\text{voltage ratio})$ . While in linear mode, the electrical voltage input changes linearly with the optical power and therefore, the ratios change linearly. Thus, the optical hysteresis in dB is half the electrical hysteresis in dB given in the data sheet. Since the SY88303BL is an electrical device, this data sheet refers to hysteresis in electrical terms. With 3.5dB LOS hysteresis, a voltage factor of 1.5 is required to assert or de-assert LOS.

Package Information

10-Pin EPAD-MSOP (K10-2)

TOP VIEW

BOTTOM VIEW

SIDE VIEW

- NOTE:
1. ALL DIMENSIONS ARE IN MILLIMETERS.
  2. MAX. PACKAGE WARPAGE IS 0.05 mm.
  3. MAXIMUM ALLOWABLE BURRS IS 0.076 mm IN ALL DIRECTIONS.
  4. PIN #1 ID ON TOP WILL BE LASER/INK MARKED.

16-Pin QFN

**PCB Thermal Consideration for 16-Pin QFN® Package**  
 (Always solder, or equivalent, the exposed pad to the PCB)

**Package Notes:**

1. Package meets Level 2 qualification.
2. All parts are dry-packaged before shipment.
3. Exposed pad must be soldered to a ground for proper thermal management, solder void has to be less than 50% of the epad area.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
