

DIO6810

Ultra Low Power Microprocessor Reset Circuit

Features

- 140ms min Reset Pulse Width
- 10 μ A Supply Current @V_{CC}=3V
- Guaranteed Reset Valid to V_{CC} = +1.0V
- Power Supply Transient Immunity
- Operating Temperature Range
-40°C to +85°C
- Available in SOT-23 and SOT-23-3

Block Diagram

Descriptions

DIO6810 series are micro-processor (μ P) supervisory circuits used to monitor the power supplies in μ P and digital systems. They provide excellent circuit reliability and low cost by eliminating external components.

These circuits perform a single function: they assert a reset signal whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 140ms after V_{CC} has risen above the reset threshold.

The DIO6810 has CMOS outputs. The DIO6810 has an active-high RESET output. The reset comparator is designed to ignore fast transients on V_{CC}, and the outputs are guaranteed to be in the correct logic state for V_{CC} down to 1.0V over the temperature range.

The device is available in 3 pin SOT-23 and SOT-23-3L package.

Applications

- Computers
- Controllers
- Intelligent Instruments
- Portable/Battery-Powered Equipment

Pin Descriptions

Pin No.	Symbol	Description
1	GND	Ground terminal
2	RESET	CMOS output. This output remains high if V_{CC} drops below V_{RES} , and for at least 140ms after V_{CC} rises above $V_{RES}+V_{HYST}$
3	V_{CC}	Analog input. This pin is both the power supply to internal circuit and the voltage to be monitored

Absolute Maximum Ratings

Stresses beyond those listed under "Absolute Maximum Rating" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Parameter		Rating	Units

DIO6810

Applications Information

A microprocessor's (μP 's) reset input starts the μP in a known state. The DIO6810 series assert reset to prevent code-execution errors during power-up, power-down, or brownout conditions. The device consists of a comparator, a low current high precision voltage reference, voltage divider, output delay circuit and output driver. They assert a reset signal whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 140ms after V_{CC} has risen above the reset threshold.

The DIO6810 have a CMOS output stage. The DIO6810 have an active-high RESET output. The reset comparator is designed to ignore fast transients on V_{CC} , and the outputs are guaranteed to be in the correct logic state for V_{CC} down to 1.0V over the temperature range.

The operation of the device can be best understood by referring to figure 2.

Negative-Going V_{CC} Transients

In addition to issuing a reset to the μP during power-up, power-down, and brownout conditions, the DIO6810 series are relatively immune to short-duration negative-going V_{CC} transients (glitches). As the magnitude of the transient increases (goes farther below the reset threshold), the maximum allowable pulse width decreases. Typically, a V_{CC} transient that goes 100mV below the reset threshold and lasts 10 μ s or less will not cause a reset pulse. A 0.1 μ F bypass capacitor mounted as close as possible to the V_{CC} pin provides additional transient immunity.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
