

FEATURES

Conversion loss: 9 dB typical
 Local oscillator (LO) to radio frequency (RF) isolation:
 37 dB typical
 LO to intermediate frequency (IF) isolation: 37 dB typical
 RF to IF isolation: 20 dB typical
 Input third-order intercept (IP3): 20 dBm typical
 Input second-order intercept (IP2): 50 dBm typical
 Input power for 1 dB compression (P1dB): 10 dBm typical
 IF bandwidth: dc to 8 GHz
 Passive: no dc bias required
 3 mm × 3 mm, 12-terminal ceramic LCC package

APPLICATIONS

Point to point radios
 Point to multipoint radios and very small aperture terminals
 (VSATs)
 Test equipment and sensors
 Military end use

GENERAL DESCRIPTION

The [HMC773ALC3B](#) is a general-purpose, double balanced mixer in a leadless, RoHS compliant LCC package that can be used as an upconverter or downconverter from 6 GHz to 26 GHz. This mixer requires no external components or matching circuitry.

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The [HMC773ALC3B](#) provides excellent LO to RF and LO to IF suppression due to optimized balun structures. The mixer operates well with LO drive levels of 13 dBm or above. The [HMC773ALC3B](#) eliminates the need for wire bonding, allowing use of surface-mount manufacturing techniques.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required.

θ_{JA} is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure.

θ_{JC} is the junction to case thermal resistance.

Table 4. Thermal Resistance

Package Type	θ_{JA}	θ_{JC}	Unit
E-12-4 ¹	120	225	°C/W

¹ See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance (PCB with 3 × 3 vias).

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

- NOTES**
1. NIC = NOT INTERNALLY CONNECTED. THESE PINS ARE NOT CONNECTED INTERNALLY. HOWEVER, ALL DATA SHOWN HEREIN WAS MEASURED WITH THESE PINS CONNECTED TO RF/DC GROUND EXTERNALLY.
 2. EXPOSED PAD. THE EXPOSED PAD MUST BE CONNECTED TO RF/DC GROUND.

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 3, 7, 9, 10, 12	GND	Ground. Connect these pins and package bottom to RF/dc ground. See Figure 3 for the GND interface schematic.
2	LO	Local Oscillator Port. This pin is ac-coupled and matched to 50 Ω. See Figure 4 for the LO interface schematic.
4, 6, 11	NIC	Not Internally Connected. These pins are not connected internally. However, all data shown herein was measured with these pins connected to RF/dc ground externally.
5	IF	Intermediate Frequency Port. This pin is dc-coupled. For applications not requiring operation to dc, block this pin externally using a series capacitor with a value that passes the necessary IF frequency range. For operation to dc, to prevent device malfunction or failure, this pin must not source or sink more than 2 mA of current. See Figure 5 for the IF interface schematic.
8	RF	Radio Frequency Port. This pin is ac-coupled and matched to 50 Ω. See Figure 6 for the RF interface schematic.
	EP	Exposed Pad. The exposed pad must be connected to RF/dc ground.

THEORY OF OPERATION

The [HMC773ALC3B](#) is a general-purpose, double balanced mixer that can be used as an upconverter or a downconverter from 6 GHz to 26 GHz.

When used as a downconverter, the [HMC773ALC3B](#) downconverts radio frequencies (RF) between 6 GHz and 26 GHz to intermediate frequencies (IF) between dc and 8 GHz.

When used as an upconverter, the mixer upconverts intermediate frequencies between dc and 8 GHz to radio frequencies between 6 GHz and 26 GHz.

The mixer performs well with LO drives of 13 dBm or above, and it provides excellent LO to RF and LO to IF suppression due to optimized balun structures. The ceramic LCC package eliminates the need for wire bonding and is compatible with high volume, surface-mount manufacturing techniques.

APPLICATIONS INFORMATION

TYPICAL APPLICATION CIRCUIT

Figure 77 shows the typical application circuit for the HMC773ALC3B. The HMC773ALC3B is a passive device and does not require any external components. The LO and RF pins are internally ac-coupled. When IF operation is not required until dc, it is recommended to use an ac-coupled capacitor at the IF port. When IF operation to dc is required, do not exceed the IF source and sink current rating specified in the Absolute Maximum Ratings section.

Figure 77. Typical Application Circuit

EVALUATION PCB INFORMATION

RF circuit design techniques must be implemented for the evaluation board PCB shown in Figure 78. Signal lines must have 50 Ω impedance, and the package ground leads and exposed pad must be connected directly to the ground plane, similar to that shown in Figure 78. Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 78 is available from Analog Devices, Inc., upon request.
