3 Introduction

The ARD-AUDIO-DA7212 is an audio 'Shield' Module that can be used with a number of Arduino compatible MCU platforms. The ARD-AUDIO-DA7212 Shield features the Dialog DA7212 audio codec.

DA7212 is an ultra-low power audio codec ideal for standalone audio/video digital processors, IC recorders and many other portable applications. The audio front-end simultaneously supports stereo FM line input with four analogue (or two analogue and two digital) microphones with two independent microphone biases. Comprehensive analogue mixing and bypass paths to the output drivers are available. The headphone output is true-ground Class G with integrated charge pump. There is also a differential Class AB speaker driver that can serve as a mono lineout.

The features of the ARD-AUDIO-DA7212 Audio Shield are:

- DA7212 two-channel audio codec with capless headphone driver for portable media players
- 3.5mm stereo AUX input jack socket
- Smartphone-compatible HEADSET connection on a 4-pole, 3.5mm jack socket
- Interchangeable GND and MIC routing to the smartphone jack allows multiple headsets to be supported
- Compatible with the *Freescale Freedom Development Platform* (for KL46, KL36, KL26, and KL16)

4 Summary

This document provides information about the ARD-AUDIO-DA7212 that will enable you to use it with the many Arduino-compatible MCU platforms available on the market.

- Freescale Freedom Platform:
<http://www.freescale.com/webapp/sps/site/overview.jsp?nodeId=015210045A>
- Arduino platform:
<http://arduino.cc/en/>
- Intel Galileo platform:
<http://www.intel.com/content/www/us/en/intelligent-systems/galileo/galileo-overview.html>

This document is limited to detailing the hardware of the ARD-AUDIO-DA7212 board only. It should be used in conjunction with the DA7212 datasheet and the MCU platform hardware and software User Guide for system level compatibility and operation.

The ARD-AUDIO-DA7212 offers a great flexibility. Please note, however, that there are a number of sections of the board that are not populated by default. The details of the missing components for order and population can be found in the Bill of Materials section (see section 7).

5 ARD-AUDIO-DA7212 Hardware Description

The ARD-AUDIO-DA7212 is an audio shield featuring the DA7212 audio codec that can be used with multiple Arduino-compatible MCU platforms.

5.1 DA7212 Audio Codec

The DA7212 audio codec is controlled via the MCU platform processor over the I2C serial communication interface. Digital audio is transmitted and received over the I2S interface.

The default I2C device addresses for the DA7212 are:

- Write = 0x34h
- Read = 0x35h

The I2S interface digital audio transfer between the processor and the DA7212 can be done in Slave or Master mode (in Slave mode, the DA7212 receives BCLK and WCLK; in Master mode, the DA7212 generates BCLK and WCLK).

5.2 Power Supply

There is one regulator (U1) on the ARD-AUDIO-DA7212 driven by the +3.3 V supply sourced from the Arduino-compatible connector J7 (pin 8).

The regulator U1 generates a +1.8 V supply.

There are three supplies used to power the circuitry on the ARD-AUDIO-DA7212:

- +1.8 V from U1 used for VDD_A / VDD_CP on the DA7212
- +3.3 V from J7 (pin 8) used for U1 input, VDD_IO and VDD_MIC on the DA7212 and the optional 11.2896 MHz oscillator (Y1)
- +5.0 V from J7 (pin 10) used for the VDD_SP supply on the DA7212

The regulator U1 has an Enable (EN) pin, which is connected to a GPIO (PTA13; J1 pin 2) of the MCU on the development platform. As default this signal connection is open due to the series resistor R23 being Unpopulated ('Unpop'). The EN pin is pulled to +3.3 V via a 10K Ω resistor (R25).

5.3 MCLK Source

The default MCLK source is from the MCU on the development platform supplied to the DA7212 via J2, pin7.

Alternatively, an on-board oscillator circuit can be populated and used as the MCLK source. The suggested component (Y1) is a fixed frequency 11.2896 MHz TXC oscillator (AW-11.2896MBE-T). The DA7212 PLL can be used to generate other internal MCLK frequencies as required.

5.4 Interfaces

5.4.1 I2S

The I2S interface is used to receive and transmit the audio data between the DA7212 and the processor used on the chosen development platform.

The I2S interface consists of a Word Clock (WCLK), a data clock (BCLK), a serial data input (DI) and a serial data output (DO).

These signals are connected directly between the DA7212 and the Processor on the development platform with all logic running at +3.3 V.

5.4.2 I2C

The I2C interface is used to transmit the DA7212 control data as well as to read back the settings as required.

The I2C interface consists of a data clock (SCL) and a serial data input/output (SDA).

The pull-up resistors required for correct operation of the I2C interface are situated on the ARD-AUDIO-DA7212 module.

5.5 I/O Connectors

5.5.1 AUX_IN

Analogue signals are applied to the auxiliary inputs AUX1_L and AUX_R via the 3.5 mm jack socket J4.

The DA7212 analogue inputs are DC biased so a series DC blocking capacitor is added to the input path.

5.5.2 HEADSET

A standard headset (headphones + microphone) can be attached to the ARD-AUDIO-DA7212 via the 3.5 mm, 4-pole (TRRS) socket J6.

There are two options available for pole allocation depending on headset manufacturer and region. R34 and R36 (default) or R33 and R35 can be used to route the MIC and GND signals for the two implementations. Headphone Left and Right remain fixed.

The DC bias for the headset microphone is sourced from MICBIAS1. The microphone signal is input to the DA7212 on MIC1_R.

Figure 2 Headset Jack Configuration Options

Table 1 Headset Jack Configuration Options (See Figure 2)

Component	Functionality	Setting	Description
R34 & R36 R33 & R35	Headset jack signal select	Short Open	1=MIC, 2=GND, 3=HPR, 4=HP <i>(Default)</i>
R34 & R36 R33 & R35	Headset jack signal select	Open Short	1=GND, 2=MIC, 3=HPR, 4=HPL

A 3-pole (TRS) headphone can also be attached to the connector J6.

5.5.3 MIC (on-board)

The on-board Micro-Electrical Mechanical System (MEMS) microphone (MK1) is input to MIC2_R. The VDD supply for the microphone is sourced from MICBIAS2.

5.6 Quick Reference

The board component placement is shown in Figure 3. A summary of the connection options is listed in [Table 2](#).

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
