\*1 The value is primary surge. The current of input surge to a built-in EMI/EMC Filter(0.2ms or less)is excluded.  
 \*2 Please contact us about dynamic load and input response.  
 \*3 This is the value that measured on measuring board with capacitor of 22μF and 0.1μF at 150mm from output terminal.  
 Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103). Please refer to the instruction manual 2.7.  
 Ripple and ripple noise spec is change at Io=0 to 30% by burst operation.  
 \*4 In case of operating under 0°C ambient temperature, the value is two times of specification at 0 to 30% load factor.  
 \*5 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*6 Please contact us about another class.  
 \*7 Case size contains neither the umbo.  
 \*8 Only as standard mounting orientation (A). Refer to the instruction manual 5.1.  
 If install other than standard mounting orientation (A), please fix the power supply for withstand the vibration and impact.  
 \*9 When two or more units are operating it may not comply with the IEC61000-3-2.  
 \*10 If the overcurrent protection circuit operates continuously, the output voltage shut down. Refer to the instruction manual 2.3.  
 \* To meet the specifications. Do not operate over-loaded condition.  
 \* A sound may occur from power supply at light or peak loading.

\*1 The value is primary surge. The current of input surge to a built-in EMI/EMC Filter(0.2ms or less) is excluded.  
 \*2 Please contact us about dynamic load and input response.  
 \*3 This is the value that measured on measuring board with capacitor of 22μF and 0.1μF at 150mm from output terminal.  
 Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103). Please refer to the instruction manual 2.7.  
 Ripple and ripple noise spec is change at Io=0 to 30% by burst operation.  
 \*4 In case of operating under 0°C ambient temperature, the value is two times of specification at 0 to 30% load factor.  
 \*5 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*6 Please contact us about another class.  
 \*7 Case size contains neither the umbo.  
 \*8 Only as standard mounting orientation (A). Refer to the instruction manual 5.1.  
 If install other than standard mounting orientation (A), please fix the power supply for withstand the vibration and impact.  
 \*9 When two or more units are operating it may not comply with the IEC61000-3-2.  
 \*10 If the overcurrent protection circuit operates continuously, the output voltage shut down. Refer to the instruction manual 2.3.

 \*5 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*6 Please contact us about another class.  
 \*7 Case size contains neither the umbo.  
 \*8 Only as standard mounting orientation (A). Refer to the instruction manual 5.1.  
 If install other than standard mounting orientation (A), please fix the power supply for withstand the vibration and impact.  
 \*9 If the overcurrent protection circuit operates continuously, the output voltage shut down. Refer to the instruction manual 2.3.  
 \*10 Please contact us about DC input voltage.  
 \* To meet the specifications. Do not operate over-loaded condition.  
 \* A sound may occur from power supply at light or peak loading.

\*1 The value is primary surge. The current of input surge to a built-in EMI/EMC Filter (0.2ms or less) is excluded.  
 \*2 Refer to 3. instruction manual.  
 \*3 Please contact us about dynamic load and input response.  
 \*4 The output voltage is below 23.5V, the value is equal to three times of the specification.  
 \*5 This is the value that measured on measuring board with capacitor of 22 μF and 0.1 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103). Please refer to the instruction manual 2.7.  
 \*6 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.  
 \*7 Please contact us about another class.  
 \*8 Case size contains neither the umbo.

\*9 Only as standard mounting orientation (A). Refer to the instruction manual 5.1. If install other than standard mounting orientation (A), please fix the power supply for withstand the vibration and impact.  
 \*10 Burst operation at 30% load or less.  
 \*11 Output derating is required. Please refer to the instruction manual 5.2.  
 \*12 Please contact us about DC input voltage.  
 \* To meet the specifications. Do not operate over-loaded condition.  
 \* A sound may occur from power supply at light or peak loading.
