- Status LEDs: AC OK, POWER GOOD, PS FAIL

The Bel Power Solutions SFP650-12BG is a 650 W, power factor corrected (PFC) front-end which provides a 12 VDC output for datacom and other distributed power applications. Its compact size enables mounting in both 1U and 2U height racks. High efficiencies, advanced thermal management techniques, and an internal fan increase reliability over a broad range of operating conditions. Internal ORing diodes facilitate use in hot-swap (plug)*, redundant configurations.

Status is provided with front panel LEDs, logic signals, and via the I2C management interface bus.

The SFP650-12BG meets international safety requirements and is CE marked to the Low Voltage Directive (LVD).

* Proper hot-swap (plug) operation instruction: Power supply is not intended to be inserted into the system with AC cord already applied. Alternatively, if there is an application where power supply insertion with AC cord is required; PS_ON must be toggled or AC recycled after insertion into the system to reset the power supply.

Interface Signals & Internal Protection³

PARAMETER	CONDITIONS/DESCRIPTION	MIN	NOM	MAX	UNITS
Overvoltage Protection	Latch-style overvoltage protection.			15 4.3	V
Overcurrent Protection	Current limit (Latching Mode).	12V output: Standby output:	56.0 3.2	69.3 6	A
Short-Circuit Protection	Latching Mode.				
Overtemperature/ Fan Failure Warning	12 V output will shut down in the event of an overtemperature condition or blocked fan rotor. OT setpoint is 62 ±3 °C. Supply's fan and Vaux are active. Power supply will recover when OT condition is removed. Amber OT LED will turn ON to indicate fault condition.

Write Protect	For factory use only.				
PS A0	I ² C Address.				
SDA	I ² C Data line (3.3 V).				
SCL	I ² C Clock line (3.3 V).				
Tach	Two pulses per fan revolution.				
AC_OK/H	High signal indicates AC is within PSU limits.				
Present/L	100 Ohm resistor internally connected to RTN allowing the PSU to be detected on insertion.				
Alert/L	Low signal indicates PSU fan is running below speed or an overtemperature limit was exceeded.				
PWROK/H	High signal indicates both outputs are within regulation limits.
