

## MAX5386/MAX5388

## Dual, 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

### General Description

The MAX5386/MAX5388 dual, 256-tap, volatile, low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10k $\Omega$ , 50k $\Omega$ , and 100k $\Omega$ . Operating from a single +2.6V to +5.5V power supply these devices provide a low 35ppm/ $^{\circ}$ C end-to-end temperature coefficient. The devices feature an SPI interface.

The small package size, low supply voltage, low supply current, and automotive temperature range of the MAX5386/MAX5388 make the devices uniquely suitable for the portable consumer market and battery-backup industrial applications.

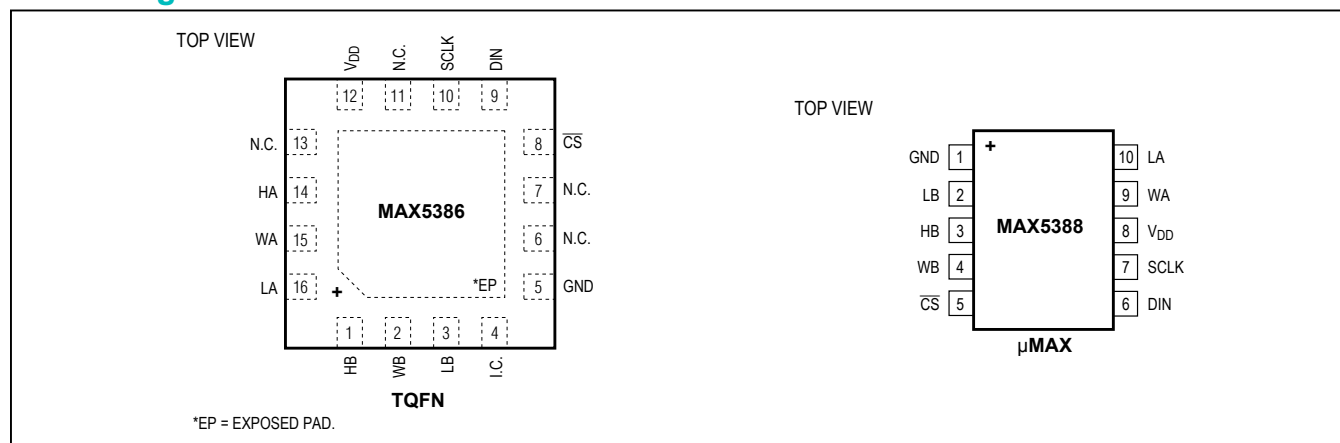

The MAX5386 includes two digital potentiometers in a voltage-divider configuration. The MAX5388 includes one digital potentiometer in a voltage-divider configuration and one digital potentiometer in a variable-resistor configuration. The MAX5386/MAX5388 are specified over an extended -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range and are available in 16-pin, 3mm x 3mm TQFN or 10-pin, 3mm x 5mm  $\mu$ MAX<sup>®</sup> packages, respectively.

### Applications

- Low-Voltage Battery Applications
- Portable Electronics
- Mechanical Potentiometer Replacement
- Offset and Gain Control
- Adjustable Voltage References/Linear Regulators

**Functional Diagrams appear at end of data sheet.**

### Pin Configurations

### Features

- Dual, 256-Tap, Linear Taper Positions
- Single +2.6V to +5.5V Supply Operation
- Low (< 1 $\mu$ A) Quiescent Supply Current
- 10k $\Omega$ , 50k $\Omega$ , 100k $\Omega$  End-to-End Resistance Values
- SPI-Compatible Interface
- Power-On Sets Wiper to Midscale
- -40 $^{\circ}$ C to +125 $^{\circ}$ C Operating Temperature Range

### Ordering Information

PART	PIN-PACKAGE	END-TO-END RESISTANCE (k $\Omega$ )
MAX5386LATE+	16 TQFN-EP*	10
MAX5386MATE+	16 TQFN-EP*	50
MAX5386NATE+	16 TQFN-EP*	100
MAX5388LAUB+	10 $\mu$ MAX	10
MAX5388MAUB+	10 $\mu$ MAX	50
MAX5388NAUB+	10 $\mu$ MAX	100

**Note:** All devices are specified over the -40 $^{\circ}$ C to +125 $^{\circ}$ C operating temperature range.

+Denotes a lead(Pb)-free/RoHS-compliant package.

\*EP = Exposed pad.

$\mu$ MAX is a registered trademark of Maxim Integrated Products, Inc.

**Absolute Maximum Ratings**

V <sub>DD</sub> to GND.....	-0.3V to +6V	Continuous Power Dissipation (T <sub>A</sub> = +70°C)	
H <sub>-</sub> , W <sub>-</sub> , L <sub>-</sub> to GND.....	-0.3V to the lower of (V <sub>DD</sub> + 0.3V) and +6V	16 TQFN (derate 14.7mW/°C above+70°C).....	1176.5mW
All Other Pins to GND.....	-0.3V to +6V	10 μMAX (derate 8.8mW/°C above+70°C).....	707.3mW
Continuous Current in to H <sub>-</sub> , W <sub>-</sub> , and L <sub>-</sub>		Operating Temperature Range.....	-40°C to +125°C
MAX5386L/MAX5388L.....	±5mA	Junction Temperature.....	+150°C
MAX5386M/MAX5388M.....	±2mA	Storage Temperature Range.....	-65°C to +150°C
MAX5386N/MAX5388N.....	±1mA	Lead Temperature (soldering, 10s).....	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Electrical Characteristics**

(V<sub>DD</sub> = +2.6V to +5.5V, V<sub>H-</sub> = V<sub>DD</sub>, V<sub>L-</sub> = GND, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted. Typical values are at V<sub>DD</sub> = +5V, T<sub>A</sub> = +25°C. ) (Note 1)

SCLK Pulse-Width Low	$t_{CL}$		40			ns
CS Fall to SCLK Rise Setup Time	$t_{CSS}$		40			ns
SCLK Rise to CS Rise Hold Time	$t_{CSH}$		0			ns
DIN Setup Time	$t_{DS}$		40			ns
DIN Hold Time	$t_{DH}$		0			ns
SCLK Rise to CS Fall Delay	$t_{CS0}$		10			ns
SCLK Rise to SCLK Rise Hold Time	$t_{CS1}$		40			ns
$\overline{CS}$ Pulse-Width High	$t_{CSW}$		100			ns

**Note 1:** All devices are 100% production tested at  $T_A = +25^{\circ}C$ . Specifications over temperature limits are guaranteed by design and characterization.

**Note 2:** DNL and INL are measured with the potentiometer configured as a voltage-divider (Figure 1) with  $H = V_{DD}$  and  $L = GND$ . The wiper terminal is unloaded and measured with an ideal voltmeter.

**Note 3:** R-DNL and R-INL are measured with the potentiometer configured as a variable resistor (Figure 1). DNL and INL are measured with the potentiometer configured as a variable resistor.  $H_{-}$  is unconnected and  $L_{-} = GND$ . For  $V_{DD} = +5V$ , the wiper terminal is driven with a source current of  $400\mu A$  for the  $10k\Omega$  configuration,  $80\mu A$  for the  $50k\Omega$  configuration, and  $40\mu A$  for the  $100k\Omega$  configuration. For  $V_{DD} = +2.6V$ , the wiper terminal is driven with a source current of  $200\mu A$  for the  $10k\Omega$  configuration,  $40\mu A$  for the  $50k\Omega$  configuration, and  $20\mu A$  for the  $100k\Omega$  configuration.

**Note 4:** The wiper resistance is the worst value measured by injecting the currents given in Note 3 in to W with  $L = GND$ .  $R_W = (V_W - V_H)/I_W$ .

**Note 5:** Drive HA with a 1kHz GND to  $V_{DD}$  amplitude tone.  $LA = LB = GND$ . No load. WB is at midscale with a 10pF load. Measure WB.

**Note 6:** The wiper-settling time is the worst case 0 to 50% rise time, measured between tap 0 and tap 127.  $H = V_{DD}$ ,  $L = GND$ , and the wiper terminal is loaded with 10pF capacitance to ground.

**Note 7:** Digital timing is guaranteed by design and characterization, not production tested.

Typical Operating Characteristics

( $V_{DD} = 5V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

Typical Operating Characteristics (continued)

( $V_{DD} = 5V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

Typical Operating Characteristics (continued)

( $V_{DD} = 5V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

Pin Description

PIN		NAME	FUNCTION
MAX5386	MAX5388		
1	3	HB	Resistor B High Terminal. The voltage at HB can be higher or lower than the voltage at LB. Current can flow in to or out of HB.
2	4	WB	Resistor B Wiper Terminal
3	2	LB	Resistor B Low Terminal. The voltage at LB can be higher or lower than the voltage at HB. Current can flow in to or out of LB.
4	—	I.C.	Internally Connected. Connect to GND.
5	1	GND	Ground. Both pins must be grounded.
6, 7, 11, 13	—	N.C.	No Connection. Not internally connected.
8	5	$\overline{CS}$	Active-Low Chip-Select Input
9	6	DIN	Serial-Interface Data Input
10	7	SCLK	Serial-Interface Clock Input
12	8	V <sub>DD</sub>	Power-Supply Input. Bypass V <sub>DD</sub> to GND with a 0.1μF capacitor close to the device.
14	—	HA	Resistor A High Terminal. The voltage at HA can be higher or lower than the voltage at LA. Current can flow in to or out of HA.
15	9	WA	Resistor A Wiper Terminal
16	10	LA	Resistor A Low Terminal. The voltage at LA can be higher or lower than the voltage at HA. Current can flow in to or out of LA.
—	—	EP	Exposed Pad (TQFN Only). Internally connected to GND. Connect to ground.

Figure 1. Voltage-Divider/Variable-Resistor Configurations

**Detailed Description**

The MAX5386/MAX5388 dual, 256-tap, volatile low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10kΩ, 50kΩ, and 100kΩ. Each potentiometer consists of 255 fixed resistors in series between terminals H and L. The potentiometer wiper, W, is programmable to access anyone of the 256 tap points on the resistor string.

The potentiometers in each device are programmable independently of each other. The MAX5386/MAX5388 have an SPI interface.

**SPI Digital Interface**

The MAX5386/MAX5388 include an SPI interface, which provides a 3-wire write-only serial data interface to control the wiper tap position through inputs chip select ( $\overline{CS}$ ), data in (DIN), and data clock (SCLK). Drive  $\overline{CS}$  low to load data from DIN synchronously into the serial shift register on the rising edge of each SCLK pulse. The MAX5386/MAX5388 load the last 9 bits of clocked data once  $\overline{CS}$  transitions high. See Figures 2 and 3. After all the data bits are shifted in, data are latched into the appropriate potentiometer control register when  $\overline{CS}$  goes from low to high. Data written to a memory register immediately updates the wiper position. Keep  $\overline{CS}$  low during the entire data stream to prevent the data from being terminated.

The first bit A0 (address bit) addresses one of the two potentiometers; writing a zero in A0 addresses control register A and writing a one in A0 addresses control register B. See Table 1. The power-on reset (POR) circuitry sets the wiper to midscale (D[7:0] 1000 0000).

The 8 data bits (D7–D0) indicate the position of the wiper. For D[7:0] = 0000 0000, the wiper moves to the position closest to L. For D[7:0] = 1111 1111, the wiper moves closest to H. D[7:0] is 1000 0000 following poweron for both registers A and B.

**Register A:** The data byte writes to register A, and the wiper of potentiometer A moves to the appropriate position at the rising edge of  $\overline{CS}$ . D[7:0] indicates the position of the wiper. D[7:0] = 0000 0000 moves the wiper to the position closest to L. D[7:0] = 1111 1111 moves the wiper to the position closest to H. D[7:0] is 1000 0000 following power-on.

**Register B:** The data byte writes to register B, and the wiper of potentiometer B moves to the appropriate position at the rising edge of  $\overline{CS}$ . D[7:0] indicates the position of the wiper. D[7:0] = 0000 0000 moves the wiper to the position closest to L. D[7:0] = 1111 1111 moves the wiper to the position closest to H. D[7:0] is 1000 0000 following power-on.

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
0	4/09	Initial release	—
1	11/09	Released MAX5386LATE+ and MAX5386NATE+ in <i>Ordering Information</i> ; corrected specifications for Full-Scale Error, Zero-Scale Error, and Integral Nonlinearity in <i>Electrical Characteristics</i> ; added I.C. row to <i>Pin Description</i> ; corrected Figure 1	1, 2, 7
2	1/10	Released the MAX5388LAUB+, MAX5388MAUB+, MAX5388NAUB+ + in <i>Ordering Information</i> .	1
3	9/14	Removed automotive reference from data sheet	1

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at [www.maximintegrated.com](http://www.maximintegrated.com).

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the *Electrical Characteristics* table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
