

## M3-F Micro-Mechatronic Focus Modules

Precision lens control; superior image quality

M3-F focus modules add high-resolution lens motion to the smallest OEM cameras. A complete closed-loop motion solution, the M3-F module is no larger than a fixed lens holder and has low power requirements for use in battery-powered devices.

The M3-F module is a single-lens focus solution with minimal external processing requirements, making it simple and cost-effective to integrate focus into your camera system. Precise lens position control (0.5 micron resolution), best-in-class bi-directional repeatability and no hysteresis enable you to capture the sharpest images from your board-mounted camera system.

M3-F modules are designed for long life, with high-performance that is not susceptible to temperature or power variations.

### The M3 micro-mechatronic platform

The M3-F module is built on New Scale's M3 Micro-Mechatronic Module technology platform. The platform provides the smallest, highest resolution and most repeatable closed-loop micro-mechatronic system available – all in an easily integrated, customizable package. The platform includes a patented

SQUIGGLE® RV piezo micro motor, an NSD-2101 drive ASIC, an NSE-5310 high-resolution magnetic position sensor, and a microprocessor with on-board closed loop control. These combine to create the world's smallest closed-loop linear motion system, with performance comparable to much larger systems.

**Flexibility and Precision:** M3-F modules are easily integrated with your camera board and lens. The M3-F is a complete, drop-in focus solution that requires no more space than a fixed lens holder.

**SQUIGGLE RV motor and driver inside every M3-F module is the world's smallest linear motor system.**
