

NB7L572

2.5V / 3.3V Differential 4:1 Mux Input to 1:2 LVPECL Clock/Data Fanout / Translator

Multi-Level Inputs w/ Internal Termination

The NB7L572 is a high performance differential 4:1 Clock/Data input multiplexer and a 1:2 LVPECL Clock/Data fanout buffer. The INx/INx inputs includes internal $50\ \Omega$ termination resistors and will accept differential LVPECL, CML, or LVDS logic levels. The NB7L572 incorporates a pair of Select pins that will choose one of four differential inputs and will produce two identical LVPECL output copies of Clock or Data operating up to 7 GHz or 10 Gb/s, respectively. As such, NB7L572 is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications.

The NB7L572 INx/INx inputs, outputs and core logic are powered by a $2.5\text{ V} \pm 5\%$ V or $3.3\text{ V} \pm 10\%$ power supply. The two differential LVPECL outputs will swing 750 mV when externally terminated with a $50\ \Omega$ resistor to $V_{CC} - 2\text{ V}$, and are optimized for low skew and minimal jitter.

The NB7L572 is offered in a low profile 5x5 mm 32-pin QFN Pb-free package. Application notes, models, and support documentation are available at www.onsemi.com.

The NB7L572 is a member of the GigaComm™ family of high performance clock products.
