

**SPREAD SPECTRUM CLOCK SYNTHESIZER**

IDT5P50901/2/3/4

**Description**

The IDT5P50901/2/3/4 is a family of 1.8V low power, spread spectrum clock generators capable of reducing EMI radiation from an input clock. Spread spectrum technique is capable of reducing the harmonic frequency amplitude peaks by several dB.

**Ordering Information**
**Input Frequency**

10 to 25 MHz - 5P50901NBI/5P50901DVG1  
 20 to 50 MHz - 5P50902NBI/5P50902DVG1  
 40 to 100 MHz - 5P50903NBI/5P50903DVG1  
 80 to 170 MHz - 5P50904NBI/5P50904DVG1

**Features**

- 8-pin DFN package (2x2mm)  
8-pin MSOP package (3x4.9mm)
- Provides a spread spectrum output clock
- Input frequency range of 10 to 170 MHz
- Output frequency range of 10 to 170 MHz
- Center and down spread
- Peak reduction by 8 dB to 16 dB typical on 3rd through 19th odd harmonics
- Low EMI feature can be disabled
- Operating voltage of 1.8 V, 2.5 or 3.3V
- RoHS 6 compliant package

**Spread Modulation Frequency Table**

Part Number	Input (MHz)	Modulation (kHz)	Input (MHz)	Modulation (kHz)	Modulation Frequency (kHz)
5P50901	10	27	25	67.5	$ICLK * 27 / 10000$
5P50902	20	27	50	67.5	$ICLK * 27 / 20000$
5P50903	40	27	100	67.5	$ICLK * 27 / 40000$
5P50904	80	27	170	57.4	$ICLK * 27 / 80000$

## Pin Description

Pin Number	Pin Name	Pin Type	Pin Description
1	ICLK	Input	Input clock.
2	VDD	Power	Voltage supply. Connect to 1.8 V $\pm 0.1$ V, 2.5 V $\pm 10\%$ or 3.3 V $\pm 10\%$ ,
3	S0	Input	Function select 0 input. Selects spread amount and direction per table above. Internal pull-down resistor.
4	S1	Input	Function select 1 input. Selects spread amount and direction per table above. Internal pull-down resistor.
5	S2	Input	Function select 2 input. Selects spread amount and direction per table above. Internal pull-down resistor.
6	GND	Power	Connect to ground.
7	CLKOUT	Output	Clock output.
8	VDD	Power	Voltage supply. Connect to 1.8 V $\pm 0.1$ V, 2.5 V $\pm 10\%$ or 3.3 V $\pm 10\%$

## External Components

### Decoupling Capacitor

As with any high-performance mixed-signal IC, the IDT5P50901/2/3/4 must be isolated from system power supply noise to perform optimally.

A decoupling capacitor of 0.01 $\mu$ F must be connected between each VDD and the PCB ground plane.

### Series Termination Resistor

Clock output traces over one inch should use series termination. To series terminate a 50 $\Omega$  trace (a commonly used trace impedance), place a 33 $\Omega$  resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is 20 $\Omega$ .

### External Clock Input

This device operates from an external clock input and as such does not have a on chip oscillator circuit.

## Spread Spectrum Profile

The IDT5P50901/2/3/4 is a low EMI clock generator using an optimized frequency slew rate algorithm to facilitate down stream tracking of zero delay buffers and other PLL devices.

The modulation rate is directly relate to the input clock frequency.

For input frequency ICLK, then use the modulation frequency indicated for the part below.

### PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) The 0.01 $\mu$ F decoupling capacitors should be mounted on the component side of the board as close to the VDD pin as possible. No vias should be used between the decoupling capacitors and VDD pins. The PCB trace to VDD pins should be kept as short as possible, as should the PCB trace to the ground via.
- 2) To minimize EMI, the 33 $\Omega$  series termination resistor (if needed) should be placed close to the clock output.
- 3) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers. Other signal traces should be routed away from the IDT5P50901/2/3/4. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the IDT5P50901/2/3/4. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
