Product Highlights

Quick disconnects allow for quickly connecting or disconnecting a terminal. The front end of the terminal has a female-type receptacle which allows the terminal to slide onto and off of a male blade.

Spades have the open tongue end used for rapid insertion on the mounting screw. The spade is usually used on free standing studs.

Closed-end connectors are used in a variety of situations to "pigtail" or tie together 2 or more wires.

Butt Splices allow two stripped wires to be inserted into each end and "butt" in the center, with the crimp securing both wires together.

Features and Benefits	Applications
• Color-coded insulator allows easy identification of terminal size and wire gauge. • A wire stop stamped into the crimp barrel prevents insertion of over-stripped wires. • Terminal's funnel entrance is designed for increased crimping rates by speeding wire delivery into the crimp section and eliminating wire strand fold back. • The spade's open tongue end is for rapid insertion on the mounting screw / stud • The basic ring tongue type is the safest and most reliable because it cannot be disconnected unless the screw is completely removed.	• MRO (Maintenance Repair and Operations) • Consumer applications • Power applications • Motor applications • Powertrains • Transportation • Construction / Mining • Energy / Power • Production Equipment • Instrumentation • Environmental Equipment and Controls • Blower Motors
